2691. Huachuca Mtns Fire

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2002-03-04 18:42:14 UTC
From: Don Armstrong
Topic: 2691 Message: 2691

As some of you may know, there has been a fire up in the
Huachucas. It started about 9 am friday morning, somewhere just the other
side of Montezuma's Pass, and it became a raging inferno by that evening.
Well, its still going strong this morning... matter of fact it has
crested another ridge and seems to be heading for the Ramsey Canyon area.
Currently there are 2 helio's on scene doing water dumps and
scouting/directing. There isnt a great deal of radio traffic associated
with this fire, and when there is, it's mostly handheld to handheld
stuff. However traffic can be heard on the following freqs:

168.150 CNF Fire Net
169.150 CNF Air-Ground
169.600 CNF Forest Net

I havent heard anything on the Forest Tac 2 freq (170.025) but
that doesnt mean they arent using it, I just havent heard anything there
yet. The Forest Net freq seems to be the freq for relaying needs and/or
updates, with the Fire Net freq being the folks on the scene. And there
is a fair amount of traffic on the A-G freq from the helio's.
Good luck to all that can tune in!!!

73's Donnie

Somewhere in the "pucker brush" near
Libby Army Airfield
Ft Huachuca Az

2692. Re: [ArizonaScanner] Re: DPS Strange Noise On 460.475

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2002-02-26 19:16:10 UTC
From: walter.howard@juno.com
Topic: 2644 Message: 2692

In answer to the first.
Yes, the standard operating procedure in some (not all) districts
is to have more than one station transmitting at a time so that
all units in the district can hear the "traffic".
Hetrodyne "howl" is a bane to us. If we could get some more channels
(like we did from MCSO) only not limited to Maricopa County, then we
could split patrol districts into radio coverage districts, and give
better
coverage to boot.

And the second.
The "intrusion" alarms are actually the Lewis Prison in Buckeye (or was
it Florence?).
Through some fluke (mistake), DOC was allowed to license "VHF State"
for that purpose, AND license a paging transmitter on a Phoenix Fire
channel at Lewis.
So.... DPS doesn't listen to that. Only DOC at Lewis (Florence). And
you won't hear any other traffic on that besides the alarms. Dispatch to
an alarm is handled on a "yard" channel

Walter Howard
TeleComm Supervisor
Arizona Dept. of Public Safety
"Courteous Vigilance"
All opinions expressed are personal, NOT THE DEPARTMENT'S!

antenna structures for land, base and fixed stations
authorized by the wireless telecommunications bureau for
operation at temporary unspecified locations may be erected
without specific prior approval of the commission where such
antenna structures do no
t exceed a height of 60.96 meters (200 feet) above ground
level; provided that the overall height of such antennas more
than 6.10 meters (20 feet) above ground, including their
supporting structures (whether natural formation or man-made),
do not exceed a
ny of the slope ratios set forth in section 17.7(b). any
antenna to be erected in excess of the foregoing limitations
requires prior commission approval. licensees seeking such
approval should file application for modification of license.
in addition,
notification to the federal aviation administration is
required whenever the antenna will exceed 60.96 meters (200
feet) above the ground and whenever notification is otherwise
required by section 17.7 of the commission's rules. such
notification should
be given by filing faa form 7460-1, notice of proposed
construction or alteration, in duplicate, with the nearest
office of the federal aviation administration, which form is
available from that office.

ADVANCED DIGITAL SYSTEMS INC - ROBERT C JONES
TUCSON, AZ
[applicant is engaged in the sales and service of
communications equipment/systems. radios will be used strictly
for demostration purposes only in connection with sales and
services activities at various temporary unspecified locations
throughout theu]
ctrl pt 1 - 2500 N COYOTE DR STE 105 TUCSON AZ 520-798-1181
02/19/02 License Renewed
antenna structures for land, base and fixed stations
authorized by the wireless telecommunications bureau for
operation at temporary unspecified locations may be erected
without specific prior approval of the commission where such
antenna structures do no
t exceed a height of 60.96 meters (200 feet) above ground
level; provided that the overall height of such antennas more
than 6.10 meters (20 feet) above ground, including their
supporting structures (whether natural formation or man-made),
do not exceed a
ny of the slope ratios set forth in section 17.7(b). any
antenna to be erected in excess of the foregoing limitations
requires prior commission approval. licensees seeking such
approval should file application for modification of license.
in addition,
notification to the federal aviation administration is
required whenever the antenna will exceed 60.96 meters (200
feet) above the ground and whenever notification is otherwise
required by section 17.7 of the commission's rules. such
notification should
be given by filing faa form 7460-1, notice of proposed
construction or alteration, in duplicate, with the nearest
office of the federal aviation administration, which form is
available from that office.
area of operation is restricted to south of line a and/or west
of line c.

the use of radio for demonstration purposes in connection with
sale of radio equipment is limited by the following
conditions: a) the equipment shall be under the control of
licensee at all times. purchasers or prospective customers
shall not be permitt
ed to operate the equipment in any manner in the absence of
authorized employees of the licensee; b) no person other than
the licensee shall use the assigned call sign(s); c) no
representation shall be made by the licensee to any person
that a radio trans
mitter may be utilized prior to the issuance of an
authorization by the commission; d) demonstration of radio
equipment and/or coverage surveys should be completed within
two weeks; e) equipment demonstrated under the terms of this
license shall be on fre
quencies available under part 90 of the rules; f) the
technical parameters of the radio service in which the
frequency(ies) is allocated shall be observed.
this license is for demonstration purposes only and may not be
used for day to day business activity. this system is for
secondary use and the mobiles licensed herein will not count
toward the total mobile loading of these frequencies.

antenna structures for land, base and fixed stations
authorized by the wireless telecommunications bureau for
operation at temporary unspecified locations may be erected
without specific prior approval of the commission where such
antenna structures do no
t exceed a height of 60.96 meters (200 feet) above ground

level; provided that the overall height of such antennas more
than 6.10 meters (20 feet) above ground, including their
supporting structures (whether natural formation or man-made),
do not exceed a
ny of the slope ratios set forth in section 17.7(b). any
antenna to be erected in excess of the foregoing limitations
requires prior commission approval. licensees seeking such
approval should file application for modification of license.
in addition,
notification to the federal aviation administration is
required whenever the antenna will exceed 60.96 meters (200
feet) above the ground and whenever notification is otherwise
required by section 17.7 of the commission's rules. such
notification should
be given by filing faa form 7460-1, notice of proposed
construction or alteration, in duplicate, with the nearest
office of the federal aviation administration, which form is
available from that office.

2695. Paradise Valley Police Frequency 860.2375

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2002-03-06 01:32:11 UTC
From: n7djr
Topic: 2695 Message: 2695

This frequency is licensed to Paradise Valley but I hear MCSO why?

2696. RE: [ArizonaScanner] Paradise Valley Police Frequency 860.2375

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2002-03-06 06:15:35 UTC
From: Dan Rollman
Topic: 2695 Message: 2696

FCC License databases are useful sometimes, but unfortunately they aren't all they're cracked up to be... 860.2375 is a member of the Thompson Peak site of the county Smartzone system. The change has been reflected in the 7th Edition of SWFD, as has the new(er) trunked talkgroups for Paradise Valley PD on the county system.

antenna structures for land, base and fixed stations authorized by the wireless telecommunications bureau for operation at temporary unspecified locations may be erected without specific prior approval of the commission where such antenna structures do no
t exceed a height of 60.96 meters (200 feet) above ground level; provided that the overall height of such antennas more than 6.10 meters (20 feet) above ground, including their supporting structures (whether natural formation or man-made), do not exceed a
ny of the slope ratios set forth in section 17.7(b). any antenna to be erected in excess of the foregoing limitations requires prior commission approval. licensees seeking such approval should file application for modification of license. in addition,
notification to the federal aviation administration is required whenever the antenna will exceed 60.96 meters (200 feet) above the ground and whenever notification is otherwise required by section 17.7 of the commission's rules. such notification should
be given by filing faa form 7460-1, notice of proposed construction or alteration, in duplicate, with the nearest

office of the federal aviation administration, which form is
available from that office.

antenna structures for land, base and fixed stations
authorized by the wireless telecommunications bureau for
operation at temporary unspecified locations may be erected
without specific prior approval of the commission where such
antenna structures do no
t exceed a height of 60.96 meters (200 feet) above ground
level; provided that the overall height of such antennas more

than 6.10 meters (20 feet) above ground, including their
supporting structures (whether natural formation or man-made),
do not exceed a
ny of the slope ratios set forth in section 17.7(b). any
antenna to be erected in excess of the foregoing limitations
requires prior commission approval. licensees seeking such
approval should file application for modification of license.
in addition,
notification to the federal aviation administration is
required whenever the antenna will exceed 60.96 meters (200
feet) above the ground and whenever notification is otherwise
required by section 17.7 of the commission's rules. such
notification should
be given by filing faa form 7460-1, notice of proposed
construction or alteration, in duplicate, with the nearest
office of the federal aviation administration, which form is
available from that office.

2699. RE: [ArizonaScanner] AZ license grants, Feb 25-Mar 2

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2002-03-06 08:28:39 UTC
From: Dan Rollman
Topic: 2697 Message: 2699

Rich devised a database utility that packages these reports for him from a massive database download on a daily basis from the FCC. He sends them to several other local lists around the country, specific to their area, and I invited him to do so here for Arizona as well. There is no webpage that has them packaged as they appear here. Rich puts it together himself, and has agreed to do so for us here in Arizona as well on a weekly basis (when he can!).

I hope Rich doesn't mind my passing along a part of an email he wrote to me today...

"Okay, I'll give it a try. I just scanned the archive; wow, what an impressive list. Please let me know if there are any problems; I don't want to end up
bothering a lot of people with junk mail..."

I don't think too many of us on this list will see the weekly reports as junk mail... I think it's pretty slick to easily see the new license issues for the week. The real reason I post that quote, though, is his comments about an "impressive list". I've heard it plenty before. As the list owner, I just wanted to say a BIG thank you to everyone on this list! You all are top notch and really make this ArizonaScanner community enjoyable. It rarely has any of the problems associated with the wide array of personalities I see on so many other scanner lists that get out of hand. You guys make this a great place to share info and learn.

Thanks guys! And welcome, Rich.

Dan

From: n7djr
Topic: 2701 Message: 2701

Who is this? SWFD is unclear as to who the State user is I hear DPS dispatcher or someone with the same voice talking to someone about places and times and alot of callsign's but no mobile units as of yet. This frequency can get busy in the morning and evenings as everyone comes to work and then go's home at the end of the day.

Dave in Gilbert

2702. Discriminator questions...

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2002-03-06 19:13:40 UTC
From: John LaBua
Topic: 2702 Message: 2702

Hi All,

After doing some research, I've decided to attempt to install a discriminator tap in my BC780XLT scanner. I've got a few questions I'd like to ask.

1) Will this mod ALONE allow me to monitor such things as MDT traffic, ACARS and WEFAX (and the other weather type stuff) etc? A data slicer is beyond my capabilities so I wouldn't even try that. MDTMon *says* it will use a sound card to decode, but, in your opinion, does it actually work? I've decoded some ACARS stuff, but it is sporadic and not always very good. Will this mod help that also?

2) Is this mod very difficult? I've read and read and, while it doesn't APPEAR to be very difficult, I'd rather not send my radio to heaven in this manner if I am wrong. I'm not an electronics expert but have done a little soldering in the past.

3) When I walk into my local Radio Shack, what exactly do I need to buy to be able to come home and do the mod without having to make another trip for something?

4) Is this a mod that is done at electronics shops? I'd prefer to take my radio in and have them do the mod if possible to insure that someone who does electronics work on a regular basis does a professional job. Does anyone know of any out in the Phoenix, Arizona area do?

I suppose that is it for now. I'd appreciate any help on this that can be provided.

John LaBua

From: Michael Todd
Topic: 2702 Message: 2703

John

My understanding is that you need some to build some type of a "bread board" also. I hear they are not so hard to build.

I would strongly suggest you don□t attempt to monitor MDT's or alpha pagers as previous incidents across the country point to the fact that you could end up facing a federal judge if cought.

I would suggest doing some reseach on "Breaking News Network" on the internet. Some of their scanner enthusiasts had a slight run in with the law.

From my understanding no judge has ever quite ruled that it is illegal to monitor such traffic, however I would presume that those in New York City who went through this ordeal would tend to say its not worth the hassle.

I think Dan Rollman, the list owner might be able to share more light on this subject ... After all he is the Scanner Expert! (you owe me big for that one Dan!)

I do believe that monitor ACARS is legal however.

Mike

2704. AZ license grants, Feb 25-Mar 2

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2002-03-06 03:35:28 UTC
From: Rich McVicar
Topic: 2697 Message: 2704

I'll make the introduction short, as I'm adding yet more information to what looks to be a busy list.

What follows is a summary of FCC license grant actions for the past week that pertain mainly to Arizona. I started posting this type of information for Wisconsin back in 1996, and the project has grown since then, mainly from the midwest to the east coast. The information can run long on detail, but will hopefully be of general interest. If not, or if you have any other suggestions, please email me.

Thanks for the invite,

Rich McVicar

antenna structures for land, base and fixed stations
authorized by the wireless telecommunications bureau for
operation at temporary unspecified locations may be erected
without specific prior approval of the commission where such
antenna structures do no

t exceed a height of 60.96 meters (200 feet) above ground
level; provided that the overall height of such antennas more
than 6.10 meters (20 feet) above ground, including their
supporting structures (whether natural formation or man-made),
do not exceed a
ny of the slope ratios set forth in section 17.7(b). any
antenna to be erected in excess of the foregoing limitations
requires prior commission approval. licensees seeking such
approval should file application for modification of license.
in addition,
notification to the federal aviation administration is
required whenever the antenna will exceed 60.96 meters (200
feet) above the ground and whenever notification is otherwise
required by section 17.7 of the commission's rules. such
notification should
be given by filing faa form 7460-1, notice of proposed
construction or alteration, in duplicate, with the nearest
office of the federal aviation administration, which form is
available from that office.

Just an update to the "Overland Fire" as it's now being called.
So far there has been 1100+ acres burned, there are still 2 helio's and
now there are 2 tankers (P-3 type's tail # 23 & #25). As far as freq use
goes, here's a brief rundown:
169.150 CNF Air-Ground: Very busy with traffic from the
aircraft to the ground crews.
168.150 CNF Fire net: still active, but low power comms
for the most part.
169.600 CNF Forest net: mostly just alot of "needs" coordination
and sit reps to Tucson and others.
122.575 Air-Air: Lots of coordinating traffic between
aircraft, mostly rotor-wing type
122.575 Air-Air: Lots of coordinating traffic between
aircraft, mostly fixed-wing type.
NOTE: 125.600 was passed as a A-A freq earlyier this morning, but
I understand they abandoned that freq due to interference.

Also as a side note, my last posting reference this fire seemed
to make it to the list roughly 24 hours after I sent it... this one was
sent at 1800 3-6-02.

2709. RE: [ArizonaScanner] 460.525??

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2002-03-07 02:02:09 UTC
From: Dan Rollman
Topic: 2701 Message: 2709

Hi Dave,

460.525 was added to the EMSCOM statewide medical system as Med15, a free-standing repeater channel in various locations. But it was also added to the DPS CI arena as a Pinal County CI channel. It's on the consoles, and so often times dispatchers working this channel and another simulcast on both of them. So sometimes you hear only one side of other traffic on this too.

I did of course add it to SWFD-7 with both uses. One easy way to tell what you are hearing is EMSCOM channels have a 136.5 PL, and the Pinal County CI channel has a 127.3 PL (yes, different from the standard 100.0 and 151.4 PL's for DPS!)

If I misspoke on any of this, maybe Walter can clear it up too.

2710. RE: [ArizonaScanner] Discriminator questions...

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2002-03-07 02:06:34 UTC
From: Dan Rollman
Topic: 2702 Message: 2710

I think ultimately the law is unclear, but the fact remains, monitoring MDT's and pagers can (and has!) brought many many people a bunch of hassles and big legal bills. Not worth it at all! I steer very clear from even the questionable stuff, but obviously that's a call each hobbyist can make for himself.

Dan

2711. MCSO Radio Traffic File?

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2002-03-07 05:40:28 UTC
From: David French, N7FAN
Topic: 2711 Message: 2711

Has anyone come up with a audio file of the radio traffic from the other morning when the MCSO deputy was run down in north Phoenix?

David in Chandler

2712. Re: [ArizonaScanner] Discriminator questions...

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2002-03-06 19:41:43 UTC
From: August/W8MIA
Topic: 2702 Message: 2712

John,
I do not have the details on all of the questions you ask because I do not own nor have I ever worked on a 780XLT but I can answer a few questions.

Discriminator Mod:
The audio section of any FM radio has audio filtering included as part of the circuit. There is a low pass filter for de emphasis and most communications receivers use band pass filtering to allow just the important "Voice" frequencies through. This is a frequency range of approximately 300 to 2500 Hz.

The filter in this range also helps block the very low frequency CTCSS tones which are all below 250 Hz. The problem with this filtering is its tailored frequency response is for good voice reception but hurts you if using data transmission. This is why you want to bypass this filtering by recovering the audio BEFORE the filter directly after the discriminator which is where the name comes from.

Who Should Do The Work:
John, it sounds like your experience is very limited in this area and I would respectfully suggest you have it done by someone you know and trust with a soldering iron inside your "Baby"!

It's a tight place to work, parts are small, excessive heat can hurt things and you could wind up with a basket case. I would suggest you do not attempt to do this mod yourself. I would get some help from a friend with technical skills, a local Ham Radio type who knows what he is doing or PAY to have it done. If you can get some local help to do it you will then be able to learn from the experience. This is not a difficult mod for even an average grade tech but you do need the skills to solder in tight places, read the diagrams and know which parts are which, which wire goes where.

Just my opinion for the 2 cents I will bill you for it!! (:-) There are lots of folks on this list that may live close to you and offer their help. BTW, just where are you located?

August

Dave,

The books have already gone to print, so unfortunately I can't get any more new information in there. I made a special agreement with my printer to get a special advance run of a small portion done by March 19th to get out to those who pre-order it from www.scannerstuff.com. They'll be turned around and ship out to my customers on March 20th. The printer will be continuing to print books to deliver to stores and such several weeks later (it takes time, especially with the full-color cover, new larger 8.5" by 11" size, colored cardstock section dividers that have to be hand inserted, and the nicer coil bind rather than comb bind that takes longer to install).

I have a proof in front of me and all I can say is I am really proud of what we've been able to put together, more so than any edition before. Thanks in large part to all the contributors!

From: Dan Danz
Topic: 2711 Message: 2715

> Has anyone come up with a audio file of the radio traffic from the
> other morning when the MCSO deputy was run down in north Phoenix?

I've heard the whole internal recording, and it sent chills
up and down my back, especially when the deputies and other agencies
responding had a hard time finding him.

I'll tell you folks, a wounded or injured officer is one of the most
stressful situations for a dispatcher, and IMHO, the very-experienced
dispatcher who handled the incident did an EXCELLENT job.

I wish you COULD hear the whole thing, but I doubt that you'll get
anything from scanners -- it was on West, a digital talkgroup.

Now if we just had the 785D ....

I heard a little bit of it in the news and wanted to get the whole thing if possible. I'll look around and see if one of the local news websites posted it.

I wanna keep that one as a reminder of the dangers that officers face.

David

Hi Donnie,

I was listening to the fire activity on Monday. Just a question, is one of these freqs you listed a typo, or were both fixed and rotory using the
same? Also, sure would like to see you at the next Tucson meeting.

We're trying to figure out what the best use for them is.
Do we use them strickly for metro Patrol and free up the D5, D13 and D14 frequencies for use i the rest of the state?
Do we split them and get 5 narrow channels? Do we trunk the 5?
Use them for CI operations (like Tucson 14)?

Haven't made a decision yet.

Except that we don't have the "high staility" channel elements to to
that.
So we don't even try.

Getting
> two
> transmitters in phase must be tough enough, let alone trying to
> phase
> match 7. I don't envy the tech's job.

You think that's bad, try phasing an 800MHz multi-site trunked system
(ADOT).
Took my guy well over a year to get it straightened out after /\/\ set it
up.

And they have multi kilo-buck Rubidium oscillators to keep it stable.

>

> receiver, or if it always operates some, if not all of the non-voted
> transmitters.

We have 2 types voters. (Very) Old GE and 1 new JPS (on Metro West -
D14).
The GE's can do what we call "transmitter steering". The dispatcher
transmits
on the last station to be "voted", whether or not that's the correct one
for the
area where the officer is. More experienced dispatchers (read: older)
know
which site covers a paticular milepost and transmits on that, ignoring
the technology

which is wrong more than you would think.

Right now only D9 and D8 are using that (I'm at home and I'm sure about
D9,
not so sure about D8). /the rest of the districts

I haven't really noticed if the heterodyning stops
> when
> the dispatcher it talking back to a particular unit that has already

Use 1 or 2 of them as info channels for 27/28/29's, and 1 for "Hot"
traffic, particularly cross-district pursuits, perhaps?

You mention the possibility of trunking the 5. I count 6:
460.150
460.175
460.200
460.300
460.325
460.400

Also, if Southwest Ambulance gets 460.050, 460.075, and 460.100,
that leaves 460.125 still available. Anyone apply for it yet?

Hello,

In my opinion its not possible to monitor the local MDT's. Phx, Scottsdale, Glendale & Tempe MDT's, KDT's & MDC's all have to be turned on by dispatch to be active. If you got lucky and hacked a unit # "which I highly dont recommend" you may be taking away communication from an officer in the field. Besides the legalities, I doubt its possible.

Joe

I'm far from being a radio or electronics genius, but how would the
receiving of a radio signal by a scanner "take away" from an officer in
the field? Since I would assume that all the computers in the field
would send some sort of acknowledgment when a transmission is received
how would a non-transmitting scanner "steal" this communication away
from a field unit?

John

I used to volunteer with a agency in Southern California (Orange County). We set up a display with their Mobile Command Post for a city event. The MDT that went into the Command Post for the event (It was not permanently mounted. They used it for training, also.) had just come back from the shop and had the same addressing numbers as a unit that was in service at the time.

We saw all the traffic that was directed to the officer. But the worst was when a little boy came through the CP and started pushing buttons...and no one was close enough to stop him. He pushed the Emergency button on the MDT. The whole PD stopped routine traffic and started calling the unit to see if he was ok, etc.

We finally got it all straightened out and turned the MDT off. The point I was trying to make is that...heck I don't remember now. I did think it was a good story though.

Muttering to himself somewhere in Chandler...

David

antenna structures for land, base and fixed stations
authorized by the wireless telecommunications bureau for
operation at temporary unspecified locations may be erected
without specific prior approval of the commission where such
antenna structures do no
t exceed a height of 60.96 meters (200 feet) above ground
level; provided that the overall height of such antennas more
than 6.10 meters (20 feet) above ground, including their
supporting structures (whether natural formation or man-made),
do not exceed a
ny of the slope ratios set forth in section 17.7(b). any
antenna to be erected in excess of the foregoing limitations
requires prior commission approval. licensees seeking such
approval should file application for modification of license.
in addition,
notification to the federal aviation administration is
required whenever the antenna will exceed 60.96 meters (200

feet) above the ground and whenever notification is otherwise
required by section 17.7 of the commission's rules. such
notification should
be given by filing faa form 7460-1, notice of proposed
construction or alteration, in duplicate, with the nearest
office of the federal aviation administration, which form is
available from that office.

t exceed a height of 60.96 meters (200 feet) above ground
level; provided that the overall height of such antennas more
than 6.10 meters (20 feet) above ground, including their
supporting structures (whether natural formation or man-made),
do not exceed a
ny of the slope ratios set forth in section 17.7(b). any
antenna to be erected in excess of the foregoing limitations
requires prior commission approval. licensees seeking such
approval should file application for modification of license.
in addition,
notification to the federal aviation administration is
required whenever the antenna will exceed 60.96 meters (200
feet) above the ground and whenever notification is otherwise
required by section 17.7 of the commission's rules. such
notification should
be given by filing faa form 7460-1, notice of proposed
construction or alteration, in duplicate, with the nearest
office of the federal aviation administration, which form is
available from that office.

antenna structures for land, base and fixed stations
authorized by the wireless telecommunications bureau for
operation at temporary unspecified locations may be erected
without specific prior approval of the commission where such
antenna structures do no
t exceed a height of 60.96 meters (200 feet) above ground
level; provided that the overall height of such antennas more
than 6.10 meters (20 feet) above ground, including their
supporting structures (whether natural formation or man-made),
do not exceed a
ny of the slope ratios set forth in section 17.7(b). any
antenna to be erected in excess of the foregoing limitations
requires prior commission approval. licensees seeking such
approval should file application for modification of license.
in addition,
notification to the federal aviation administration is
required whenever the antenna will exceed 60.96 meters (200
feet) above the ground and whenever notification is otherwise
required by section 17.7 of the commission's rules. such
notification should
be given by filing faa form 7460-1, notice of proposed
construction or alteration, in duplicate, with the nearest
office of the federal aviation administration, which form is
available from that office.

Topic: 2729 Message: 2730

They are on the Maricopa County Trunked radio system, the Sheriff's Office
talk groups are mostly digital, only a couple are analog.

This is CI5, the Pinal county detectives frequency for DPS.

Most of the traffic you hear is a crosspatch from the local district channel.

I will definately be there with my scanner...
What are the known frequencies for everything happening, Especially the Blue Angels, Military Freq's & how about the Parachute drops, pyrotechnics, shockwave, monstar trucks??? You get the picture! haha
Thanks for any info so I can program the scanner before the show.

2736. Union Pacific Rail Road Updated Frequency Info

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2002-03-11 20:47:43 UTC
From: n7djr
Topic: 2736 Message: 2736

Hello Rail Fan's on the group, Union Pacific Rail Road has made some changes to the radio frequencies they use on the Phoenix Sub with all the VHF interference in this metro area the engineer's have been complaining about poor radio reception and the danger this has been causing. Recently I have noticed them using Ch-45 (160.785) instead of the usual Ch-96 (161.550) although they still use Ch-96 all the Detector's have been switched to Ch-45. Also the intermod on the PBX channels has got worst Ch-54 & 56 both have problems that I have noticed started after the last rainfall we had last week?
Monitor the PBX channels for Ch # information Dispatcher's 42 and 84 are asking the Trains what channel they will be using today

Dave in Gilbert

2737. NARROW BANDWIDTH???

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2002-03-11 23:04:04 UTC
From: k1fhz
Topic: 2737 Message: 2737

My question is open to all and is a bit off topic and a bit on the technical side but it was put to me by a member of another group. I understand his question and I came up "blank" for the answer with reference to the FCC spec on max bandwidth for the new 7.5 KHz channels for use between 150 and 162 MHz services as follows.

The service in question is the new MURS (multi use radio service) which has 5 channels located between 151.820 and 154.600 MHz. This is an unlicensed service.

The FCC spec's for this service call out the new narrow band channels at 7.5 KHz cannel to channel spacing with a max deviation of +/- 2.5 KHz and (here is where the question was raised) a maximum bandwidth of 11.25 KHz on Channels 1, 2 & 3 and a maximum of 12.5 KHz bandwidth on channels 4 & 5.

So with a center to center channel spacing of 7.5 KHz how can the band width be allowed to be so wide at either 11.25 KHz or 12.5 KHz? I have a good deal of experience in FM technology and systems but I must have forgotten something here because I too could not come up with an answer for him or the group on this question.

Please help fill in my gaps in this area for me! (:-) I thank you in advance. I would greatly appreciate your input.

August

David,

Try www.airshow.com The Blue Angels will be in Mesa on the 16th and 17th. The Thunderbirds will be at Luke AFB on the 23rd and 24th. DMAFB's airshow is scheduled for 27/28 April.

Sean,

Here are some Thunderbird freqs whic seem to be still valid. Not good for this weekend, but will help next weekend at Luke. Also, at DMAFB's airshow they used their "Ground" freqs for the "Air Boss". Look for the same thing to happen up in Mesa and at Luke. All freqs are AM unless noted:
123.4000 DM AFB Air Show Practice 3/4/01
123.4750 US Army Golden Knights
127.1500 DM AFB Air Boss
141.8500 DM AFB USAF Thunderbirds - 4 Ship
276.6750 DM AFB F-15 Demo
322.6000 DM AFB
322.9500 DM AFB USAF Thunderbirds - 2 ship
359.3000 DM AFB Air Boss
413.0250 (NFM) DM AFB Thunderbird Control

As far as individual stunt aircraft, most will use the tower frequency. If it is a military stunt aircraft, they will probably be on the tower UHF frequencies, in addition to their own unit frequencies.

I did a search and found a very interesting article by Larry Van Horn of Monitoring Times. He pretty much deals with the Feds and Military. It is a very comprehensive listing of radios that one needs and the historical frequencies used. This is a MUST see:
http://www.grove-ent.com/mtairshows.html

Where did you find these new 7.5KHz channel specs for MURS? I could
not find any reference to this on the FCC site.

2742. Re: [ArizonaScanner] Re: NARROW BANDWIDTH???

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2002-03-12 08:21:11 UTC
From: August/W8MIA
Topic: 2737 Message: 2742

The FCC passed reg's to reduce the channel to channel spacing which
will be complete by 2005 as now planned! Changes have already begun
moving to the new narrow band system. I am sure you have already noticed
there many new licenses being assigned frequencies that are offset by
only 7.5 KHz in the VHF band not the usual 15 KHz. The new 151 MHz
frequencies for the NHP are a great example. Check them out when you get
a chance.

The changes will go like this by band:
Band OLD NEW
30 - 50 MHz 20 KHz unchanged
138 - 150 MHz 25 KHz 12.5 KHz

150 - 162 MHz 15 KHz 7.5 KHz
162 - 174 MHz 25 KHz 12.5 KHz
406 - 420 MHz 25 KHz 12.5 KHz
450 - 512 MHz 12.5 KHz 6.25 KHz
851 - 866 MHz 25 KHz unchanged
866 - 869 MHz 12.5 KHz unchanged
935 - 940 MHz 12.5 KHz unchanged

Sorry I do not have the rule making number at hand and it's to late to
go FCC fishing
but this info has been around for some time at least 2 1/2 to 3 years!
August

John,

Got your email address off the Arizona Scanner email list which I am also a member of.

From your posts, I am guessing you live in the Peoria area? If so, you know much about Youngtown PD? Freqs, PL's and unit numbers? I know they are very small and not much goes on there but I don't know much about them.

You can certainly post what you know to the list or reply directly.

Thanks
David Greenberg

~~~~~~

Hi David,

Yes, I do live in Peoria. I believe we've met once before, at the Scottsdale Hamfest several years ago. I got a free copy of "Fire Apparatus Journal" from you.

Youngtown PD and El Mirage PD apparently merged sometime back. Or at the very least, they have a very liberal automatic-aid/mutual-aid contract. They use El Mirage 460.250 (192.8 Hz) as their primary channel, and Youngtown 453.275 (107.2 Hz) as their car-to-car channel. According to the FCC, (and Percon when they were free), Youngtown also has 453.975 allocated to it.

I'm not familiar with them enough to know what the unit numbering is. I hear 214, and Sam 10 (on a traffic stop, Youngtown, 111th and Duluth) right now. They appear to be the only two on patrol at the moment. The computer is down, and they were the only two notified of it. Just after 2am.

That's all I have right now. If I learn anymore, I'll let you know.

John H. Guetherman
Peoria, AZ.
~~~~~~

2744. Re: [ArizonaScanner] Re: DPS to gain all of the Sheriffs old UHF frequencies

Yahoo group: ArizonaScanner (1999 — 2002)

From: walter.howard@juno.com
Topic: 2684 Message: 2744

No, I meant 5 NARROW channels.
460.150
460.1625
460.175
460.1875
460.200

That would allow us to use the *current* channels in other places.
The MCSO channels are only usable in the valley.
Other users in the rest of the state.
460.300, .325 and .400 are licensed by DPS statewide.

Your suggestion is also close to another one being made:
Dispatch channel valley-wide
Info channel
Hot channel
(Notice that this corresponds to the way Phoenix PD runs their channels.)

As to 460.125, the information I had mentioned Peoria PD was interested.

2745. Air Show Notes

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2002-03-12 23:46:29 UTC
From: David French, N7FAN
Topic: 2745 Message: 2745

I collected these from the Andrews AFB Airshow in 2000. There is a lot of information there that is not location specific and might be new to us out here in AZ.

What's improved??????

If this purports to show DPS sites, it's wrong.
And it definitely DID NOT come from us!

I posted one earlier with small names so I made the names bigger and added elevation to the Mt top sites. This is a cut and paste from your DPS sites pic on the files of this group you posted sometime back. I copied it and added more site with ham radio in mind.
whats not right so I can fix it?
Dave

2750. Re: Az Transmitter site map HOME BREW!.

Date: 2002-03-13 23:36:33 UTC
From: n7djr
Topic: 2750 Message: 2750

It's home brew and by no means is ment for professional use nor does it reflect accurate locations just estimates of the Mt. tops available to use for both ham and commercial radio user's
It was taken from the DPS map on the files here at arizona scanner so all the DPS locations on the map are the same I only added some ham site to it and colored it alittle. I do not remenber calling it a DPS transmitter map? To those who thought it was I am sorry for the missing understanding and will try to be more discriptive next time

copper 5 was a kc-135 tanker from the AZ air national guard that had
a mid air collision with a private aircraft killing all on both
aircraft. I think the callsign is spelled copper but i may
be wrong. I heard this yesterday on 311.0 around 11:30AM, copper 1
flew right over my work at broadway rd and roosevelt in Tempe.

Sean :)

I have question for you. You posted the airshow is at Williams Gateway, but all of the airshow links that I have seen say Mesa. I tried several times to go to the link you provided and it does not work. Can you confirm Mesa or Williams Gateway? I need to get the right frequencies punched into my scanner for tomorrow and I'm coming up from the Tucson area.

Thanks,
John

Williams Gateway airport, the show venue, is in the city of Mesa. Take Power Rd south from US 60 and you won't miss it.

Enjoy,

Dennis

Dennis,

Thank you very much. I was going to head towards Falcon Field...oops :)

Here is the site about the airshow
http://www.accessarizona.com/partners/coxairshow/
Tickets are $17-27 at the door :>

I found the following frequency information at www.airnav.com

Airport Communications
CTAF: 120.6
ATIS: 133.5 and 270.275
WX AWOS-3: 133.50
GATEWAY GROUND: 128.25 and 275.8
GATEWAY TOWER: 120.6 WEST
124.75 EAST
255.6 EAST/WEST

Does anyone happen to have the airport emergency/fire frequencies?

This posted on was on the Milcom group, concerning the Blue Angels at the El Centro Airshow:

>From the frequencies for the Blue Angels published in the March issue of

The Airport is protected by Mesa Fire. They typically use Channel 2 when operating on a scene at the airport. Might also monitor channel 3.

2759. Blue Angels at "Willie" - 16 Mar 2002

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2002-03-17 04:07:25 UTC
From: FLANO
Topic: 2759 Message: 2759

Hello All :)

Drove up to Mesa today to check out the Blue Angels show at Williams Gateway Airport, formerly Williams AFB. They started right on time and I was all set to record some sound files onto my laptop. As luck always has it :), the battery on my laptop died. No sound files :<

I did not drive onto the airport as they were charging $17.00 for the day to watch Monster Trucks and airplanes that I was able to watch from the north end of the airport. I was there to see planes. There were three of us so I saved $51.00 and got to feel them roar over me :)

They'll be back tomorrow. I plugged in frequencies provided by Larry Van Horn's Monitoring Times article at http://www.grove-ent.com/mtairshows.html. The following were active today:

164.90 NFM Ground Support
168.90 NFM Ground Support
236.45 AM Fat Albert
263.35 AM Diamond Formation
275.35 AM Carrier - no sound
307.70 AM Irritating interference, don't know if it was used in the show, I locked out this freq.
345.90 AM Taxi Out Frequency; Aircaft 5 and 6 Solo Formation

The "Airboss" was found on 118.8mhz and was in charge of the Monster Trucks on the Runway, the Shockwave Jet Truck, and the Air Force Heritage Flight. No Blue Angels activity on the Airboss freq.

The Blue Angels sound guy was a little peeved. It seems the monster truck completely took out their show speaker system.

Next week, the Thunderbirds at Luke AFB :)

> SE of Tucson

John, if you have the capability, and get the chance to, scan for activity on the new UHF Intra-Squad Radios. These are Icom IC-4008M (Military) versions of the IC-4008A Family Radio Service radios.

396.875 MHz, 397.125 MHz, 397.175 MHz, 397.375 MHz, 397.425 MHz, 397.475 MHz, 397.550 MHz, 397.950 MHz, 398.050 MHz, 399.425 MHz, 399.475 MHz, 399.725 MHz, 399.925 MHz, 399.975 MHz.

They should be analog FM, 1/2 watt radios. If you see any "FRS-looking" radios on any service member, that should be them. Originally designed for the USMC, they are authorized for any of the armed services, the Civil Air Patrol, etc.

http://www.icomamerica.com/press/index2000.html#marines

Another possibility are the Icom F3S Soldier Intercoms that the Army is now using. VHF-High band.

http://www.icomamerica.com/press/index2000.html#army

I'll be at work from 3:30pm to midnight next Saturday, so I won't be there at the airshow.

ArizonaScanner members,

Just an update, we received the special advanced-delivery of new Southwest Frequency Directory 7th Edition Arizona books from our printing contractor this week, and all pre-ordered books have been shipped. We have a few more boxes of books available for immediate delivery for direct online orders from www.scannerstuff.com. Until this inventory runs out, online orders will be shipped within one business day.

Please see http://www.scannerstuff.com/SWFD-7-AZ.htm for information on the new book. Click the picture of the cover (featuring a Native Air Ambulance helicopter over the South Mountain towers in Phoenix) to see sample pages from this edition, highlighting the new 8.5" by 11" format.

Walter that would be great "PLEASE HELP" I have been working so hard
and asking so many folks on line and on the radio at home where all
these hill tops are? The 2 that are on my list right now are
Wildflower Mtn and Usery Mtn-wondering if it's the same as Usery Pass
also was not too sure about that transmitter named "Sunset Point"
could this be another name for Wildflower? I can't find Wildflower
on any topo or other maps.
Thanks Dave

Hi Robert,

This is better handled via private email rather than the ArizonaScanner list, but I'll respond here also so as to prevent an impression that I ignored your email on the list if I respond to your private email only. Your order was shipped out on the 19th, Invoice #605. While letters do only take 2-3 days to get to Tucson, larger packages do not always operate on that timeline since they are sorted and handled differently. You can expect your order to arrive within the next day or two. Please email sales@... directly if you do not receive it by Monday, and I'll report it lost with USPS and send another right out to you.

Dan

Hi Mark,

The book costs $34.99 and can be ordered online at www.scannerstuff.com. It's nearly 200 8.5" by 11" pages of scanner radio information (codes, terms, guides, frequencies, talkgroups, beat maps, explanations, unit callsigns and more) just for Arizona, written by local scanner experts. You can get more info on what's in the book, and even see sample pages for an idea of the layout, at www.scannerstuff.com as well.

John :)

Thanks, I'll plug them in one of my scanners....

If anyone is going to the airshow tomorrow, Saturday, I would
love to hear what frequencies are being used. I will be going up
for Sunday's show.

The show schedule can be found at
http://www.luke.af.mil/lukeday/info/time.htm

Thunderbird frequencies can be found at
http://www.grove-ent.com/mtairshows.html

Thanks in advance,

John

Subject: [ArizonaScanner] Re: Blue Angels at "Willie" - 16 Mar 2002

John, if you have the capability, and get the chance to, scan for
activity on the new UHF Intra-Squad Radios. These are Icom IC-4008M
(Military) versions of the IC-4008A Family Radio Service radios.

396.875 MHz, 397.125 MHz, 397.175 MHz, 397.375 MHz, 397.425 MHz,
397.475 MHz, 397.550 MHz, 397.950 MHz, 398.050 MHz, 399.425 MHz,
399.475 MHz, 399.725 MHz, 399.925 MHz, 399.975 MHz.

They should be analog FM, 1/2 watt radios. If you see any
"FRS-looking" radios on any service member, that should be them.
Originally designed for the USMC, they are authorized for any of the
armed services, the Civil Air Patrol, etc.

http://www.icomamerica.com/press/index2000.html#marines

Another possibility are the Icom F3S Soldier Intercoms that the Army
is now using. VHF-High band.

http://www.icomamerica.com/press/index2000.html#army

I'll be at work from 3:30pm to midnight next Saturday, so I won't be
there at the airshow.

From: m_cuizon
Topic: 2773 Message: 2773

Hello,

Anyone know if Buckeye PD picked up any new frequencies? A friend of a friend was apparently talking to a dispatcher there, and when they talked on the radio, he couldn't hear it on his scanner.

Hmm... now that I think about it, does Buckeye have the ability to get on any other agency's radio?

Just wondering and wandering.

Marc

Am currently enjoying the pilots audio on 141.850 am.
They are due back on the ground around 3:30pm, . . .
so, 20 minutes worth of activity left for anyone interested.

Dave

OK. I'm at home right now, so I'll have to write back when I'm in the
office
sometime this week.

We can start with Sunset Point. That is at the Sunset Point rest area on
I-17.
DPS and ADOT are on the pole furthest north on the property.

And do you mean Sunflower, not Wildflower?

I can find out about the others.

http://geonames.usgs.gov/pls/gnis/web_query.gnis_web_query_form
is a nice resource for finding mountain, tower, etc. locations if that helps
you guys. It didn't come up with any Wildflower in AZ.

Dan

2779. RE: [ArizonaScanner] Re: Az Transmitter site map HOME BREW!.

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2002-03-25 15:54:17 UTC
From: Dan Rollman
Topic: 2750 Message: 2779

Donnie,

You're right. When I type it in as "Wild Flower" rather than "Wildflower", USGS returns with a Valley, a Mine, and a Gap all in Yavapai County, in the Crown King 7.5' map sector. No "Summit" though. But a tower site could still be at one of those lat/longs.

http://geonames.usgs.gov/pls/gnis/web_query.gnisprod?f_name=Wild+flower&variant=N&f_state=Arizona&f_cnty=&f_ty=&elev1=&elev2=&cell=&pop1=&pop2=&my_function=Send+Query&f_ty=&last_name=&last_state=&last_cnty=&page_cnt=&record_cnt=&tab=Y

Dan

Buckeye PD uses 453.850 as the main channel and 458.850 (input of the repeater) for car to car traffic. Buckeye used to use MCSO west to talk with the deputies working in the area and I know they have several other UHF freq's in their radios.

The 145.350 Amateur repeater is located on Wildflower Mtn. It's up on the Rim somewhere. West of Payson and east of I-17, I believe.

I can't seem to be able to bring up the Arizona Ham Radio Repeaters Directory website. www.kg7bz.com aka www.azrepeaters.net N7RPZ, KG7BZ, and KB7AQD had a comprehensive list and maps of all the Amateur repeaters and sites in the state.

I did find http://www.azfreqcoord.org/2m/twometers.html It confirms 145.350 on Wildflower Mtn. and is used by the Daily Arizona Weather Net at 0600 and 1600 each day. I have heard it here in Peoria on my HT with the stock rubber duck in the past.

The main page for the ARCA's Amateur Radio repeater listings is at http://www.azfreqcoord.org/listings.htm

Wildflower Mtn. is reported to be just south of Towers Mtn. and is
just north of Black Canyon City to the west alittle according to the
AZ Repeaters web site with the GPS data. I have herd hams call
it "Wildflower" south of Prescott. No Topo maps show this
name "Wildflower" So I think it might be a name the local ham's gave
this radio site northwest of Sunset Point?

Since I'm going to be in Mesa Aridzona this weekend I thought I'd purchase the South West Frequency Directory 7 to get the lastest and greatest frequencies for the area.

The directory arrived today and after thumbing through it I was quite impressed. It's well layed out, easy to read and includes every frequency one would need .. it even had my some of my local frequencies (Simi Valley, CA).

What really sets this frequency book appart from all others I've seen is the narratives not only on general radio scanning but on each of the radio systems. The maps are going to be a great help since I'm not a native Aridzonian.

Have you approched Fry's Electronics regarding them carrying the frequency directory? The books they have in their inventory are quite sad.

Thanks Dan, and others who contributed, for such a great frequency guide.

Hmmm, too bad I have to work Saturday, (3:30pm to midnight), on the other side of the Valley in Glendale. Depending on the nature of your visit, we may have been able to set up a meet-and-greet. I don't know yet what my schedule for Sunday will be, although I may be going hot air ballooning at dawn up at Cave Creek and Jomax Rds in far north Phoenix. My Friday work schedule is 10am to 7:30pm.

Oh, and I like your spelling of Aridzona.....*grin*

BTW, there is a Thomas Guide for Phoenix. (Rand McNally/Thomas Guide) Your local TG vendors may carry it, as our local vendors carry the other editions. (Border's Books, and Barnes and Noble Bookstore chains, and The Wide World of Maps at 27th Ave. and Indian School Rd.) It may help you to get around the Valley.

I'll be buying my copy of the SWFD7 asap after they get to HRO in Phoenix. (Will Apollo CB at 43rd Ave. and Northern Rd. carry them by chance, Dan?)

http://www.rampart-sar.com/colofreq.htm

Probably the most accurate of the three pages, as Rampart SAR is in Colorado.

http://www.rampart-sar.com/newmex.htm

I don't know how accurate the info is, or of an online source for maps of the New Mexico Highway Patrol districts. The book "Monitor America" had one, though.

http://www.rampart-sar.com/nevada.htm

The Highway Patrol info is dated, as they now use a VHF High band system with the new 7.5 kHz spacing channels as I recall.

Tracy,

Thanks for all the nice comments on the book! I have approached Fry's, and they weren't interested at the time. You're right, their inventory is quite old and outdated, but they have a ton of those old books, which may in itself be why they don't want to buy anything else. I'm going to give them another go in a few weeks when I get a larger shipment of books in. They will be in HRO, Bronco One, Spy HQ, Apollo, etc. as well in a couple weeks, but for now are available from our website at www.scannerstuff.com.

By the way, the monthly Phoenix scanner get-together (hosted by Incident Command Page, but open to all scanner listeners) is this Saturday at 6:30 at Fudrucker's in Phoenix (off A-51 and Highland). Would be great to be able to meet you there if you have a few minutes while in town, Tracy. See http://www.incidentcommandpage.com/ for more meeting info and a map.

Hi all,

I just received my pre-ordered copy of SWFD in Tucson. Postmarked 3/19, delivered 3/26. I'm really suprised that it takes 7 days for a package from Phoenix.

This is not a complaint. I thought I'd post this to let the other folks who may have orders still enroute know what sort of post office delivery to expect.

Now, I'm really looking forward to paging through the book!

Jim

Thanks Glen.

Still haven't found a decent reference for New Mexico. I did find some offical web sites for Albuquerque and Bernalillo County, but no frequency info. Maybe I can use the email for the county's Communications Director or for the city's Chief Information Officer, since the Information Systems Division is responsible for the city's radio system, to get the info for at least the Albuquerque area.

Okay, the light bulb above my head just flickered to life, and I remembered two sites to check.

From http://www.trunktracker.com/states/nm.html

City of Albuquerque/Bernalillo County (Ericsson/GE EDACS)

Frequencies:

"A" System (City Services?)
856.2625 856.4625 856.4875 856.7125 857.2625 857.4625 857.7125 858.2625 858.4625 858.7125 859.2625 859.4625 860.2625 860.4625 860.9875

"B" System (BCSO, BCFD?)
866.2250 866.4750 866.7375 866.9500 867.2000 867.4750 867.7125 867.9500 868.2375

"C" System (APD, AFD, EMS?)
866.1125 866.2500 866.4500 866.5625 866.7125 866.7625 866.9750 867.0625 867.2500 867.4500 867.6000 867.9750 868.2625 868.5000 868.7500

And from http://home.att.net/~wwhitby/nm.htm (No longer updated.)

New Mexico Last Updated: 12/09/99

Albuquerque Ericsson EDACS analog Used by Police, Fire and EMS on these channels. Callsign WPMX854.
Frequencies: 866.1125, 866.250, 866.450, 866.5625, 866.7125, 866.7625, 866.975, 867.0625, 867.250, 867.450, 867.700, 867.975, 868.2625, 868.500, 868.750.

Albuquerque Ericsson EDACS analog Used by Sanitation and Water Works.
Frequencies (in LCN order): 856-860.2625, 856-860.4625.

Talkgroups: 02-021, 02-023, 02-024, 02-026, 02-027, 02-032, 02-037, 02-041, 02-041, 02-043, 02-044, 02-047

Bernalillo County Ericsson EDACS Used by the County Sheriff.
Callsign WPMU757. Frequencies (in LCN order): 866.225, 866.475, 866.7385, 866.950, 867.200, 867.475, 867.7125, 867.950, 868.2375.

Talkgroups: Bernalillo County Sheriff: 06-021 - Info, 06-026 - East Patrol, 06-023 - Patrol, 06-024 - Patrol

Bernalillo County FD: 08-001

Still doesn't give much info on the talkgroups, though. There's also some conflicting information between those two sites. The C System lists 867.600, while the police, fire, EMS list shows 867.700. The B System shows 866.7375, while the County list shows 866.7385, most likely a typo. And the A System shows 5 more frequencies than the Sanitation and Water Works list does.

I emailed the Communication Director, so I'll wait and see what kind of response I get from him.

2798. ICP Phoenix Get Together

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2002-03-27 19:46:30 UTC
From: n7qyk
Topic: 2607 Message: 2798

This is a quick reminder about the upcomming ICP Get Together in
Phoenix this Saturday the 30th of March at a special location, the
Deer Valley Airport Resturant located near the main entrance
to Deer Valley Airport at 702 W Deer Valley Road.

We meet at 6:00pm and usualy go until 8:30-9:00 (sometimes later out
in the parking lot or over on Air Lane by Phx Sky Harbor Airport).
Everyone is welcome and you do not have to belong to ICP to attend.
We
are there for the enjoyment of chatting about scanners and related
topics and we generally have a great time. ICP is just the sponser of
the get together and several ICP members are usually there as well.

For a map to the location follow this link to mapquest:

http://www.mapquest.com/maps/map.adp?zoom=7&mapdata=jZ2g%2b%2fXW8V%2bz

M%2fx0cHJBxcBdQmJEMQvuLewjuYPg%3d%3d

Yikes!!! That is a huge link, but it should work. :)

This is to just give this location a try and we will be back at
Fudruckers on Highland just East of the A51 next month unless
everyone really likes the airport location.

Come on out and say hi!!

2801. Mesa / Phoenix Interop Tests

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2002-03-28 01:46:10 UTC
From: Dan Rollman
Topic: 2801 Message: 2801

The April issue of RadioResource Magazine (http://www.radioresourcemag.com/) has a 2-page article on the December, 2001 tests that Mesa and Phoenix did to verify that both Motorola and EFJ radios could work with the APCO P25 digital systems the cities will implement. The tests were, as we learned a few months ago, successful. But the article has some better specifics on what was tested and how. It doesn't appear the entire article is available on the RadioResource magazine, but I will bring my copy to the scanner meeting at Deer Valley Airport Restaurant on Saturday.

Having eaten there many many times, I can vouch for the place.
Decent food, decent prices, friendly wait staff. (At least in the
morning, *grin*.) The hot air balloon crews frequent the DV
airport resturant Saturday and/or Sunday morning for breakfast after
flying. It's also frequented by the Air Evac/LifeNet/Native Air crews
stationed there. Can't recall if I've seen Phoenix PD Firebird or
MCSO Fox crews use it.

I have to work, of course. *sigh*

As for large groups, they do have a long central table that would
probably be your best bet. It's not near a window that faces out to
the tarmac, though. Years ago, when my crew had anywhere from 14-20
people on it, we had to wait a bit to get several tables freed up for
us. Now they have that long table just for those occasions.

This is not a very uncommon practice, all Internet companies are now loosing money that had been involved in the "free" services. Yahoo will now charge you a fee to use their POP3 email, however you can still check it for free on their web site and be bombarded with ads. The simple reason they and others do it is to make money. Anytime you provide your personal information on-line, be prepared to have that information sold to anybody and everybody.

On a separate note, I have recently changed my delivery preferences for this list to daily digest, but for some reason I am getting separate email's just for this topic. Guess I'll have to check and make sure that hasn't been changed too.

LOL, I could, but I know I wouldn't get any response. If I did, I'm sure it would be something along the lines of "sorry, we didn't realized you'd paid your Yahoo! bill this month". :) I certainly do appreciate the heads and up recommendation to go update it, though.

BTW, the change has nothing to do with Yahoo!Groups or our email list. It's apparently something they did to all Yahoo! profiles. If you go to my.yahoo.com and then click on Account Info, you can get to the same screen without being on any lists at all. And at the risk of sounding like I have the audacity to defend such an "evil empire" (according to some), a "marketing preferences" option like the one shown was not even on my profile a few weeks ago. It's possible they added a new survey, and set everything as yes until changed by the user.

Article on CNET , dated yesterday, regarding these Yahoo! changes.
http://news.com.com/2100-1023-870270.html

Excerpt below:

"Yahoo will begin e-mailing a notice of the changes beginning Thursday morning to all people registered on Yahoo.com. Given the size of this population, the e-mailings will not be completed for a few weeks. In addition to the policy changes, Yahoo revised the way it offers information about its own products. Yahoo users will now automatically have their marketing preferences set to accept updates from a smattering of Yahoo's businesses. Previously, users were offered one option to either accept or reject product notices when first registering on the site. Users will have to click "no" to opt out of receiving e-mails from a selection of 13 Yahoo products, ranging from job listings to new media products to inclusion in Yahoo's user surveys, among other things. The page also has an option for users to opt in to the Yahoo Delivers service, which sends product pitches from third parties."

As I suspected, this more detailed marketing preference survey is a new thing, which is why all the boxes were checked as yes.

Rural/Metro's Fire Department's ouster sought in Scottsdale
Scottsdale group seeks municipal department.

So currently RM has 22 stations serving 10 communities {but only 1 of these communities wants to form own department} w23 njines, 12 rescues, 3 trucks, 12 brush njines, 13 special call or support units, & 4 BC's. Have I missed anything?

Now if the cirulators of the petition are successfull & an election is held and a majority of the citizens say yes to forming own depatment, will Scootsdale pay for all that apparatus or will they want to start fresh & purchase all new apparatus to suit there own needs?

Some of those numbers in the article are real attention getters.

I believe Scottsdale already owns all of the apparatus and the stations
that house them and Rural just provides the manpower (or lack of as the
case may be). There has also been talk, nothing too serious about
Litchfield Park either contracting with Goodyear or Avondale for Fire
service or starting their own department.

Exactly. Not sure if Scottsdale owns "all" of the apparatus, but they definitely own all stations, at a a minimum "most" apparatus (especially Type 1 engines). As happened in Gilbert years ago, and just last year in Green Valley, the community hires most (or in the case of Green Valley, ALL) former Rural/Metro firefighters in the new municipal agency.

Provided Rural/Metro plays nicely, the past has proven it can be a very successful and smooth transition. If I recall correctly, Gilbert, Sun City, and Sun City West were all once Rural contracts that made the transition over.

By the way, for those who didn't see the article today, take a look at http://www.azcentral.com/news/articles/0328ruralmetro-ON.html

From: Michael Todd
Topic: 2812 Message: 2815

Scottsdale does indeed own most (if not all) of the fire apparatus in Scottsdale. They DO NOT own the ambulances. Rural Metro owns the ambulances and most all of the equipment on the trucks. Litchfield park has long spoke of moving on to a contract with Avondale or Goodyear, but to date, the majority of citizens don't want to pay the extra taxes involved with such an agreement. As it is now, Litchfield Park is a subscription area for Rural Metro.

Time will tell about Scottsdale, but typically when such talk arises (and it does about every 2 years), they find out Rural Metro is far cheaper than going on their own. The one argument Rural Metro has is that in 12 years they have not had one fatal fire in a sprinklered building, and rarely do they have a fatal fire anywhere in the city. As scanner listeners, stop and think about how many times you actually hear a working fire in Scottsdale. I am sure the crews would love to leave Rural, but in order for the city to stay competitive in its hiring practices, they have to spend a lot more money than people think. The retirement and pension plans of public departments in this state are amazing. Oh don□t forget an entire extra shift of firefighters, as well as the increase in manpower. Once Scottsdale steps out from behind the protection of using a private, for profit company, they'll have to spend a lot more money.

Mike

I believe Scottsdale already owns all of the apparatus and the stations that house them and Rural just provides the manpower (or lack of as the case may be). There has also been talk, nothing too serious about Litchfield Park either contracting with Goodyear or Avondale for Fire service or starting their own department.

Topic: 2816 Message: 2816

As Mike said, the City of Scottsdale DOES indeed own all the stations and actually about 99.8% of the apparatus. The exception being, Trk813, Engine 812, Engine 808 & possibly Engine 811. These are to be phased out with replacement by either new or reserve rigs. Look for a new Ladder 819 very soon. A way to tell if a rig was city or company owned was to look on the side and see if there was a City of Scottsdale logo on the side. But that has apparently gone by the way side and now you have to look on the back and see either the 4 digit city shop number or the 5-6 digit R/M shop number. Replacements have stepped up with the delivery of 4 new engines and a the new ladder coming soon. There is also a 2nd new rearmount platform coming for the city and a brand new ARFF truck at Scottsdale Airport. All city owned of course.

I do believe that many of the brush trucks are company owned as are the rescues as Mike stated. Once you are in the county areas, now thats a whole different ball game.

Also look to hear Ladder 823 very soon. That is the town owned and town of Ftn Hills lettered new 75-ft ladder getting ready to go in service very soon. They are finishing the company training.

I certainly don't want to turn it in to a debate on this list, but the whole reason this all came about this time around, is because the outside analysis done over the past two years showed Scottsdale can get a lot more for less money on it's own. Rural has always held that as an efficient private corporation, they were cheaper. But reality showed otherwise in Gilbert (today, their budget is much higher since they've grown so much, but not after they split), and now in Green Valley (4 more firefighters per shift, smaller budget). in Scottsdale, the expense of fire protection right now is astronomically higher than many people think, because the Rural contract is not the end of the story. Per the report a while back, when you combine what the city pays for the stations, apparatus it owns, and associated expenses, and then combine that with what it gives Rural, you have a fire department budget much more on the level of the other valley cities.

As for sprinklers, Rural loves to talk that up, but that's a Scottsdale City Code. It doesn't have a whole lot to do with the fire department, but rather the city building codes, which is enforced by the city. True, Rural advocated it heavily, but it is the city that passed it and enforces it. Something any valley community could do.

For many, the issue with Rural in Scottsdale is apart from fire, and boils down to the desires of many to have more than 2, and at best 3, firefighters arrive within a few minutes to a code arrest. As scanner listeners, any of us who listen to Scottsdale have heard things quite frequently we can shake our head at and say "well, that's Rural." :)

As for ambulances, Rural has the CON (Certificate of Necessity) not Scottsdale anyway, so Rural would retain all ambulance transport services in Scottsdale. Scottsdale needs no ambulances for that reason, just like Mesa and other cities where the municipal fire department doesn't have the CON anyway.

The idea that municipal fire service would cost more may be true (it hasn't proved true in several Arizona communities, even with a slightly better level of service after; in some it has been true), but I don't think anyone can fairly say these events and the past year or so is not the single strongest bid by citizens and firefighters to leave the company yet. Mike's right that talk like this has occasionally come up, but I don't recall (and from everyone I've talked to, they confirm) it ever being this serious and likely at some point. The issue with citizens, it appears, is not Rural itself but service levels. That being the case, the community may be at a point where it wants to spend a whole lot more money on fire services anyway. Which begs the question, won't a counter citizens group come along and suggest retaining Rural, but paying them more for more service? Probably.

As scanner listeners, it will be a lot of fun (I think) to hear how things change in their operations if/when they go on their own. The writing has been on the wall for several years. Even from a communications standpoint... Ch6 and Ch7 was licensed by the City of Scottsdale, not Rural/Metro... presumably so that when they go on their own those channels could become new Tactical channels on the Phoenix system if they went that route for alarm.

I hope I didn't just fuel what could become a raging policy debate on a scanner list. LOL. :) Just wanted to provide some additional thoughts from Mike's email, for those interested in the topic.

2819. Radio codes...

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2002-03-30 16:59:05 UTC
From: John LaBua
Topic: 2819 Message: 2819

Hi all,

I just heard on the scanner that the Glendale FD and PD going to be doing a door-to-door canvas of the neighborhood around what was called a 904 Fatality between 1100 and 1200 hrs today. Since SWFD 6th Edition doesn't list a 904 for Glendale, I went digging. About the only thing I can come up with is from the MCSO listing which has a 904 as a Fire (with several sub-designators, none of which are for a fatality).

However, Glendale has a code (905) listed as an Arson.

Does anyone have a clue as to what this is all about?

On one hand, it sounds like an arson death. But, if it is, why don't they call it a 905 Fatality?

Curious minds want to know....

John

Probably firefighters helping canvas the area for apartments with windows modified like the one involved in the multi-fatal apartment fire a couple days ago in Glendale. Just a guess. If 904 is fire, it wouldn't really need a specific suffix just to say "904 fatality". That works.

Well, a couple of things have happened since the original post.

I've heard that it does indeed concern a fire that happened near 69th and Glendale a couple of days ago which matches the article link you sent Dan.

However, I suppose my question remains: Since Glendale HAS a code for a fire (which is a 905 according to the SWFD 6th) does anyone know why they would use a 904 Fatality for this? I understand that you don't really need a code to further describe a fire that had a fatality, but is the 905 code valid for Glendale? If it is, anyone know why they would use 904 to describe this? From the article you sent, it doesn't appear that arson is a primary suspected cause.

John

I need to correct some of the info above. The code listed in the SWFD is a 905 which is for an arson, not just a fire.

Maybe the 904 code (which isn't shown under Glendale or Phoenix, but IS shown under MCSO as a fire) is either a new code for a fire without arson or something that has been there all along but mistakenly got left out of the SWFD (since Glendale is shown as being the same as Phoenix EXCEPT for the ones listed).

What say Dan?

John

The Glendale code list I have is two years old so it may in fact be a newer code. And I haven't got up from my computer since 8:00AM and most of the email I'm replying to now has arrived since then. New messages arrive faster than I reply. So for that matter, the weekend may never progress. :)

Donnie :)

Go up Kolb to Speedway, hang a left on Speedway, pass Wilmot and get to the left. Just after you pass Wilmot Rd, you will see Fuddruckers on your left, the southside of Speedway. It's around 6100 E Speedway.

Looking forward to finally meeting you face to face :)

John

p.s. Will anyone at our gathering have SWFD 7.0 Books for sale?

John,

I will be at the Phoenix scanner meeting tonight with book, so I guess that is a no. I should have sent my brother (he's a radio geek for a fire department down there, came with me to the last Tucson meeting) a few copies and asked him to have them there. Oh well. Obviously you can still order them from www.scannerstuff.com and they will be shipped right to your door... Won't come with a Fuddruckers cheeseburger though. :)

"904", like many other codes here, is/was used in California as the code for FIRE. There was also a version that used "929" for FIRE.
Both were supposed to have been CA Sheriff's Ass'n codes from way back when.
They were old when I started using them in Oakland in 1961.

2828. Active Pursuit in District 11

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2002-03-31 01:30:33 UTC
From: David French, N7FAN
Topic: 2828 Message: 2828

Active on 460.475 at 18:30 3/30/02

AIR 4 calling the pursuit. Vehicle has stopped and two male occupants have exited vehicle number 1.

Vehicle #2 turned around and took off in the opposite direction. AIR4 is maintaining cover for Vehicle 1 until all are in custody. No DPS units following Vehicle 2.

I don't know where this is, but I'm listening in Chandler on a small telescoping scanner antenna.

David, N7FAN

AIR4 reports that they used their PA system and advised Vehicle 2 to stop, turn around, and return to the DPS officers.

No one is sure if Vehicle 2 is involved, but when he spotted the roadblock (set up for Vehicle 1?), he turned around and fled in the opposite direction, until stopped by the Air unit.

Dispatch cleared the "air" at 1836. Anyone else catch what happened?

Final Notes:

"Unit 1140 to be notified, at home, of pursuit."

"Will be classified as a "Failure to Yield." Lead on-scene unit states that they set up a perimeter and the vehicle stopped.

Vehicle 2 is not involved as far as anyone knows.

Unit 1146 requesting that dispatch "advise Falcon that we are Code 4."
Dispatch called "AIR4."

I thought Falcon was a Mesa PD bird? Does it pull double duty, or did the officer call it wrong?

David

Topic: 2828 Message: 2831

Falcon is the Mesa PD helicopter, but they are also referred to as Air 3 and Air 4. Mesa PD never calls them Falcon on their air that I am aware of. The Falcon (and Firebird, in Phx PD's case) are mainly calls signs used for the Air Traffic Control, although Phx PD helos call themselves Firebird anytime they are off of a Phx PD frequency. It's a bit confusing sometimes even for the pilots. On many occasions I have heard a Phx PD aircraft call themselves AirXX and then correct it to Firebird or never even realize they didn't call themselves Firebird.

The big difference is Mesa PD only uses Air 3 and Air 4, while Phx uses Air 1-24 to signify the time the aircraft if going down for Pilot rest. Air 23 basically says "Don't count on this aircraft after 23:00 hrs" while Air 1 signifies the same thing but only for the 1am time frame.

Hope that clears things up!

Mike

Subject: Re: [ArizonaScanner] Active Pursuit in District 11

Final Notes:

"Unit 1140 to be notified, at home, of pursuit."

"Will be classified as a "Failure to Yield." Lead on-scene unit states that they set up a perimeter and the vehicle stopped.

Vehicle 2 is not involved as far as anyone knows.

Unit 1146 requesting that dispatch "advise Falcon that we are Code 4." Dispatch called "AIR4."

I thought Falcon was a Mesa PD bird? Does it pull double duty, or did the officer call it wrong?

David

For some reason I thought that either Life Net or Air Evac sometimes go by Falcon...infact, I'm pretty sure that's what they call themselves on Air Traffic Control.

Lifenet nor AirEvac ever go by Falcon. Those are actually registered call signs with either Air Traffic Control. Just as America West calls themselves Cactus on tower frequencies, Phx PD has chosen Firebird.

Lifenet uses "LIFENET" AirEvac uses "AIREVAC" or sometimes "EVAC" and Native Air uses Native. Those call signs are "local call signs. Native Air is in the Process of getting a national or international call sign at the moment. Not sure what it will be, every employee was asked to submit suggestions.

Hi,

I've got a problem with the BNC antenna connector on my Bearcat that is preventing any reception.

After taking a look, I've decided that I'm probably not the person to crack it open and attempt to repair it, so I was wondering if anyone in the metro-Phoenix area here can recommend a local repair shop that is authorized to service Uniden.

I went to the Uniden website, but in that case I have to actually ship them my radio, which I'm not to fond of.

Any ideas are welcome. thanks in advance.

Alan

Charles Simmont <csimmont@...>

2839. E316 on 460.600?

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2002-04-01 10:51:37 UTC
From: jhguetherman
Topic: 2839 Message: 2839

Sunday morning I heard E316 clear fire dispatch (not fire alarm, if I recall correctly), for a radio check on 460.600. Dispatch asknowledged them. I was at Cave Creek and Jomax Rd's., at about 8:15-8:30 am. I'm wondering if this was Buckeye, or was some skip rolling in? I was using my PRO-43 handheld scanner, with a dual-band Amateur whip from my old Standard dual-band HT. The signal was crystal clear, no noticeable noise or other interference.

460.600 is Peoria PD ch. 3.

Buckeye Doesn't have an Engine 316 yet that I am aware of. I believe their current apparatus consists of BC311, E311, L311, LT311, BR311, T311, R311 (haven't figured that one out yet), U311, E312, B312, & possibly E319. Being up that far north you may have been hearing on the departments in Yavapai County. I don't know which if any depts use a UHF radio system though.

Charles, I have had a GRE PreAmp for about a year now and it does increase signal strength. I don't use it all that often but it has come in handy several times. I ordered it through a local Radio Shack and they shiped it directly to me a few days later. If you order one and don't like it you can return it to any RS. I would suggest that you never turn it up all the way. I've heard of people blowing the front end receiver on their radios by leaving it turned up all the way and then being too close to the transmitter source.

If it's just a weak signal it is great at pulling it in and clearing it up a little. If it's a signal that is already garbled from cross talk or too many transmitters in the area it *can* make things worse.

Just my two cents, I still carry mine in my radio bag so it's handy. If you don't like it and want to return it, your only out shipping.

Jeff

2847. Fire Service Question

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2002-04-02 08:32:43 UTC
From: jhguetherman
Topic: 2847 Message: 2847

I'm wondering if anyone here knows. On the phlscanner group (Philadelphia), there's a thread going about the fact that fire companies in a Philly suburb are scrambling to find the funds to equip each and every firefighter with their own HT, instead of only the command personel and company officer's having them. If I recall correctly, it's because of a recommendation that every firfighter have their own radio, for safety purposes.

Who made the recommendation, when, and can the text of it be found online? If it isn't available online, can someone post at least the title and whatever other pertinent information regarding the recommendation, so that someone could go look it up some other way? I'd like to pass it on, if someone else on that group doesn't do it first.

Thanks.

Yes, I think this was on Mesa Drive. I took these photos while enroute to the Easter Pagent at the Mesa Temple on Saturday. I also took some photos (poor quality photos) of an engine and a ladder truck rolling code-3 to the shooting incident in front of the temple.

I'm suprised that I couldn't find any mention of either incident in the newspapers even though a PIO was dispatched to the scene of the crash. While I can't say for sure I think they did mention that a pedestrian was involved in the traffic accident. Much of the street was still blocked off hour later when we went home.

It was sure nice to have a radio scanner with me so I could know what was going on around us. The FRS frequencies were also very active at the event. There were no wireless mics that I could pick up (I think all of the sound for the show was pre-recorded) and I didn't find any frequencies used for the event, I didn't spend much time searching for them.

Im sure that it was a recommendation from the NFPA. More specifically, NFPA 1221: Standard for the Installation, Maintenance, and Use of Public Fire Service Communication Systems, 1999 Edition. I dont know the wording on that standard, but that would be where I would start. The text can be viewed @ www.nfpa.org, but you have to pay for it.

I believe the recommendation was made by the NFPA.
It hasn't been a problem around this valley for years. Every
firefighter has had his own radio for years.

This standard has been out of years. I am surprised Philly is just now
wanting to follow it.

I am not sure about Philly, But I just read the Southwest Supermarket fire/Brett Tarver report, And as I remember, That was a recommendation in the report, To equip each Firefighter with a portable radio.

Kevin

John,
This is as close as I can get because I must run but there are about
1300 Phil. Fire related sites here and I think it may just pop up for you.

You can go to your favorite search engine and go from there.
<http://www.google.com/search?site=swr&hl=en&q=Philadelphia++fire+department+radio&as_q=firefighter&btnG=Search%A0within%A0results>

2854. Re: Sedona Fire District 460.60 WNZC977

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2002-04-03 00:02:29 UTC
From: John H. Guetherman
Topic: 2854 Message: 2854

Interesting. I've never heard them at home here in Peoria. I wonder if it was due to my location at Cave Creek and Jomax Rd's. in northeast Phoenix, or if there was some kind of propagation enhancement that kicked their signal up and over the mountains?

I know I can hear Amateur 2m repeaters on Mingus Mtn. Perhaps due to my location at the time, though, the site on Squaw Peak near Camp Verde is what I heard.

Anyway, thanks for the info, Mike.

2855. Re: Fire Service Question

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2002-04-03 00:54:49 UTC
From: jhguetherman
Topic: 2847 Message: 2855

This is a suburb of Phildelphia, not the city itself. Here's the
original post:

Radio proposal costly for firefighters MONTCO's

http://www.philly.com/mld/inquirer/news/local/2975914.htm

Jim Bonner
PhilaFireFilms/PhilaCityWide

And some responses:

Thanks for the link, Jim. Reading the story left me with a question,
though. When the chiefs bemoan the cost of equipping their
firefighters with radios are they proposing each FF gets a two way
radio? That's the impression I get with the dollar figures mentioned.
Doing the math, looks like each FF needs a $2700 radio, except in
Horsham where the price is $5000 each. Why is that needed? When I was
in the fire service we just had pagers that alerted us to an alarm
and we went to the firehouse. What are all these radios for? Bad
enough I have to buy FIVE chiefs in my township new Ford Expeditions
or Explorers every few years to run to fires in. Now each FF needs a
walkie-talkie? Sorry if I offended anyone with those last couple of
comments, but I think we need to put things in perspective here.
Sounds like a lot of puffery coming from some of these chiefs.

Regards,
Bob

...The only people I see in a fire company needing their own radios
would the command personnel.

Edmond

I made my own post, mentioning that it was most likely due to a
recommendation that each firefighter carry their own radio for
safety purposes. By the way, I grew up in eastern Montgomery County.
Most, if not all, the departments are volunteer, and are currently
using a mix of VHF-Low and VHF-High band gear. Now, the County wants
all of it's FD's to get on the new 800 MHz trunked system which the
police are already on, and which has talkgroups set aside for the
FD's. But the FD's don't have the funds to do so, since they get very
little from the townships, borough's and cities, unlike the PD's. And
from the above responses, some are wondering why every firefighter
needs their own radio. Which is why I was looking for who made the
recommendation on that.

John.

In a message dated 4/3/02 3:14:08 AM US Mountain Standard Time,
ArizonaScanner@yahoogroups.com writes:

> I am not sure about Philly, But I just read the Southwest Supermarket
> fire/Brett Tarver report, And as I remember, That was a recommendation in
> the report, To equip each Firefighter with a portable radio.
Kevin

Kevin, having the 35th Ave final report in front of me and reading it several times, on what page did you find that there was a recommendation to equip all the FFs with a radio??? As Mike Todd said, thats been a standard here in the Phx area for years now. Even Rural Metro has them for everyone on their trucks.

Let me know what page you found that on.
David

Just new information regarding more Phoenix Battalion Chiefs.

Also from the recommendations in the final report of the 35th Ave & McDowell 5th alarm. Battalion 8 has been placed in service. I was told they are quartered at Station 41 and the North Deputy (ex BC4) is now at Station 30. I will confirm the move on Thursday for sure. More BC's to go in service soon. Remember though they are NOT new BATTALIONS just more Chiefs to scenes for safety reasons.

page 27 on the .pdf file titled "Lessons Learned and Reinforced"....It just says all ff's must have a portable radio

Kevin

2861. RE: [ArizonaScanner] Phx Fire Dept

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2002-04-04 01:03:35 UTC
From: Michael Todd
Topic: 2859 Message: 2861

I am pretty sure that□s one of those lessons to be reinforced, not
learned.
Kevin, you guys in Buckeye don□t all have radios? Just command staff?
Man, I really thought even the smallest of the departments around here
had radios for everyone.

I have not seen the report in full yet, but I do know Phx FD and at
least I thought most other departments here in the state ensure radios
are assigned to every person on a truck.

Mike

2862. Re: Radios and Phx FD

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2002-04-04 02:59:20 UTC
From: fyrfotog2@aol.com
Topic: 2862 Message: 2862

Ok, I might have been a little quick to jump and say that the recommendation for the radios in Phx was not in the report.

Page 26 Chapter 8 "Lessons Learned & Reinforced"

* "All firefighter must have a portable radio. Is all I could find.

I think what they really meant was that everyone should have their assigned radio with them at all times. Not we (the FD) need to equip our members with radios.

It also goes with the little sticker on their helmets that say what company they are part of. Every time I go into a station ride on a truck no matter what city around Phx and them included, there is at least 1 person that has NOT changed that sticker. When I rode Ladder 9 a few weeks ago to photograph it, 1 engineer had L20 on his helmet and the other had an engine co sticker on his. So go figure!! :)

>>>Kevin, you guys in Buckeye don’t all have radios? Just command staff?
Man, I really thought even the smallest of the departments around here
had radios for everyone.

There are at least 2 portables on each truck right now, and the bigger
stations will have 4 per truck in the next few weeks.

Kevin

2864. SWFD #7 Review....

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2002-04-07 20:08:58 UTC
From: Don Armstrong
Topic: 2864 Message: 2864

For those of you who haven't yet purchased the latest version of Scannerstuff's "Southwest Frequency Directory 7th Edition", may I present you with my impressions, and mostly my opinions, of this latest version. Please keep in mind, this is strictly my impressions and opinions!! Like most of you, I have the 6th Edition and the supplement, and I have found both of these publications to be very valuable because of the accuracy and the "up-to-datedness" of them. I have come to rely on them to further advance my enjoyment of this wonderful hobby. In keeping those thoughts in mind, here is my review.....

First impressions.....

Well, the very first thing that hits you is the fact that the paper size is significantly bigger, it is now 8 1/2" x 11" as compared to the 5 1/2" x 8 1/2" 6th edition, and the plastic spiral binding device is now red instead of black. There is a wonderful picture of Native Air helicopter "Native 5" on the cover, with the backdrop being some of the towers on South Mtn (Phx). It really is a much better quality picture (and probably a wee bit more appropriate!) than the one on the 6th edition. There is still the clear plastic cover sheets covering both the front and the back pages, which I find to be a plus for keeping the covers of the book in good condition.
Next thing that hits you is that this one is not near as thick as the 6th edition! A quick thumbing from the front to back covers, shows that this book has 185 pages of info, compared to the 392 pages of info in the 6th edition. And another quick scan, this time of the printing, seems to indicate that the print size is the same for both of the books! I was somewhat disappointed... there doesn't seem to be as much info in the new book as compared to the 6th edition! (remember, this is my FIRST impressions!)
Again, while thumbing through the book, I notice that the layout is similar to the 6th edition, State and Federal info following the introduction pages, then there is the listings by counties, followed by the last few pages with travel info and misc freq info. Very familiar feelings... navigating this book will be the same as the one before it! However, its at the end of this book where I find the major difference between this one and the 6th edition...., Nevada, Oregon, Utah, and Washington state info is not in here! Gone, missing, omitted... not present! This explains why the new book is thinner than the old one.

OK... I have had the book for 3 days now... I have had the opportunity to sit down and pour over it and heres my second impressions... probably the ones that count the most!

Again... I really like the cover picture! I think it is most fitting for a publication such as this! Great idea Laura, and a great

picture Michael! I also find the statement on the top of the back cover to be most appropriate! (you'll have to get the book to understand that statement!). I feel that I must mention the red spiral binding device... it is far better (read: superior!) than the black one on the 6th edition! There will be no more "rewinding" of the spiral which is a blessed and vast improvement!
I have found that this book is "significantly" more informative (first impressions can be wrong!) then the previous edition! For instance, 2 1/2 pages explaining Smart Zone & Smartnet Trunking, almost 2 pages devoted to aeronautical listening with terms and definitions and a nation wide map showing ARTCC areas, a full page devoted to medical helio ops, 2 1/2 pages devoted to fire dept ops, a "quick reference" page with Az counties and cities, a state map showing counties with a "quick reference" guide to the associated Sheriff freqs. All of these pages are written such as to inform both the beginning and seasoned listener. Very nice touches!
Next up is the Az state govt listings with a 2 page write up, including maps and definitions about the Az Dept. of Corrections. Followed by 6 pages of information regarding Az DPS... I say again, it's written with both the novice and veteran in mind! There's even a couple pages about the Az DOT!
Next up is the Federal listings... 9 pages of stuff including 10 codes, maps, designators... very little of this info is available in the 6th edition! The first 45 pages of this book will educate us all!
Next comes the county listings... again they are in alphabetical order, (there's that "comfortable" thing again!), I find the state map with the county shaded to be a very nice touch! And speaking of shading, you will notice that virtually every single "frequency" page of this book, has some, and in some cases TONS, of shaded areas on it... this is the new/updated info as compared to the 6th edition! This is a very nice and handy touch! It makes seeing the new/updated info very easy! I think everybody will like this feature... it allows the new purchaser to see the value of this edition vs. the 6th edition, and it allows those of us that have the 6th edition to spot very quickly what we need to change in our scanners!
Those people that live in the Maricopa and Pima county areas will be overwhelmed with all of the new information!... Maps, 10 codes, designators, talk groups ect.... the amount of info is almost doubled from what is available in the 6th edition!
Overall, I am very impressed with this new edition! I liked the new spiral binding, I liked all of the new listings for the state, I enjoyed the trunking information, everyone in the Maricopa / Pima county areas will be very happy with this book. I am proud to have contributed to this publication, and I can pretty much agree with a statement from the back cover....
"Every effort possible is made to ensure that this directory includes all of the information a scanner enthusiast in Arizona could possibly want."

This brings me to the cons of this edition... remember, this is only MY opinion, your opinions may vary! Also, this in no way detracts from my pride in participating in this edition. I want that to be perfectly clear!
As mentioned above, I was somewhat alarmed at the lack of thickness of this book... it is because there is no info for Utah, Oregon, Washington, and Nevada, so if you were hoping to get updated/new info for those areas (which are available in the 6th edition) your out of luck.
Also, I feel that I must point out that this book is mainly coming from a Public Safety point of view! Now, this is not a bad thing... mainly because all of us first got interested in scanners because we wanted to hear what the cops were saying. Right?!... Well, alot of us are still interested in what the cops have to say but, there are alot of other areas that some of us have ventured into... such as railroads, airplanes, military ect., and while this book does a pretty decent, "well-rounded" job of covering most of the above, I feel that there is alot more info available for some of the more "specialized" portions of the available scanning world. This is where those of us that have "special interests" need to get involved and participate! If we submit the info, I'm sure it will be published!

That about summs up my feelings and opinions... I think this edition is a necessity for those that dont have the 6th edition AND its supplement, or for those that are new to the area or new to the hobby! I will not throw away my 6th edition and I will forever covet my 7th edition (at least until the next edition comes out!)

Ditto here, Don.

Neato 7th, Dan... except for lack of quick lookup by freq. in back of directory.... but we all know why you don't do this. ;)
Keep up the high quality. It can only result in greater sales.

2866. APCO Needs 800Mhz Interference Reports - in a nutshell

Yahoo group: ArizonaScanner (1999 — 2002)

From: jhguetherman
Topic: 2866 Message: 2866

Copied from socalscan. For more information/background, check
the "800band" Yahoo group.-John.

Date: Sun, 7 Apr 2002 07:02:39 -0700
From: "Harry Marnell" <ham148@...>
Subject: APCO Needs 800Mhz Interference Reports - in a nutshell

FORWARDED From: <zerg90@...>
Sent: Sunday, April 07, 2002 06:56
Subject: [fr2] APCO Needs 800Mhz Interference Reports

APCO (the Association of Public Safety Communications Officers) has
put out a call for interference reports - and they need the info
immediately. http://www.apcointl.org or http://www.apco911.org is the
website - they have an online form where you can report 800 Mhz
interference problems.

The background goes something like this - NEXTEL wants all 800Mhz
public safety users to move to 700Mhz - and they want business users
on 800Mhz to move to 900 Mhz - the FCC is now asking for comments on
NEXTELs proposal - NEXTEL is giving $25 million to APCO (who
coordinates all police radio licenses before they are submitted to
the FCC) - Microsoft just pumped a bunch of money into NEXTEL, and
signed an agreement to use NEXTEL as the wireless carrier for
Microsoft wireless web services / homepages / Net content

More or less overnite, this seems to have turned into a battle
between public safety and Microsoft.

2868. Re: [ArizonaScanner] Re: Arizona License Grants

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2002-04-08 18:59:52 UTC
From: walter.howard@juno.com
Topic: 2858 Message: 2868

Right hand doesn't know what the left is doing.

They gave up all of these.

Just like the FCC broadcast bureau licensed a channel 64 on South
Mountain.
This is smack dab in the public safety 700 MHz assignments.

Argghhhh........

Subject: [ic706] YAHOO:INVASION OF PRIVACY!
==========
Yahoo is at it again! Urgent protect your info!
Please let everyone you know, know of this right now!

Yahoo is now using something called "Web Beacons" to track you around the net & see what you are doing. ...like cookies......

Take a look at:
<http://privacy.yahoo.com/privacy/us/pixels/details.html>
Somewhere about halfway down the page on the right hand side there is a blue tiny little link that lets you opt-out of their electronic snooping.

I advise everyone to do so immediately if not sooner.

Also note that when you opt out, a window opens that says you have successfully opted out, but also says that if you want ot cancel opt out to press the small window below.

DON'T click the small window thinking that it is the final opt out. NOT!!!!!

2871. BC8 & the Phx FD

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2002-04-15 06:23:44 UTC
From: fyrfotog2@aol.com
Topic: 2871 Message: 2871

Just a note on Phx Fire Dept.

Spoke to the NDC on Saturday which has now moved to Sta30 on what they think is a temp reassignment.

The NDC told me that NONE of the recommendations from the 35th Ave 5th alarm final report have been implemented.

BC8 is just a trial and is staffed by only captains & operates from Sta41 (odd as they went on a 3-1 with E39 WAY down south one day). Also the area in the far north part of the city is still BC4 and has not been renamed or renumbered BC8. He said look for them in the future to probably become BC4. He goes on to say that in the future the Phx FD wants to have in service 10 Battalion Chiefs each shift (NOT 10 different Battalion areas, just extra chiefs on the street) with 2 Safety Battalions or Safety Chiefs in addition to Car957 which is actually a TRT Safety Capt that goes on fires also. Those 2 are already in place (NDC & SDC).

I think thats about it. Look for a another most unusual truck to go in service at Foam 34. Its called a Schwing. I'll let you guys figure that one out!!!!

2873. Any Pima Co. Live Audio Feeds Online?

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2002-04-16 02:46:01 UTC
From: michael_m_rubino
Topic: 2873 Message: 2873

Dear Group:

Are there any live audio feeds for Southern Arizona specifically
the Pima County Sheriff's Department?

Thanks,

Mike

2874. UHF Med Channels-Part 90

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2002-04-16 05:13:09 UTC
From: jhguetherman
Topic: 2874 Message: 2874

What kind of radios are being used around the state for EMSCOM, and are they capable of all the channels, as required by the FCC's rules and regulations, based on date of license issue?

I got this from 47CFR90.20:

http://www.access.gpo.gov/nara/cfr/waisidx_01/47cfr90_01.html

http://frwebgate.access.gpo.gov/cgi-bin/get-cfr.cgi?TITLE=47&PART=90&SECTION=20&YEAR=2001&TYPE=TEXT

...(65) This frequency is primarily authorized for use in the dispatch of medical care vehicles and personnel for the rendition or delivery of medical services. This frequency may also be assigned for intra-system and inter-system mutual assistance purposes. For uniformity in usage these frequency pairs may be referred to by channel name as follows:

Frequencies base and mobile (megahertz) (MHz)	Mobile only Channel name
462.950	467.950 MED-9
462.95625	467.95625 MED-91
462.9625	467.9625 MED-92
462.96875	467.96875 MED-93
462.975	467.975 MED-10
462.98125	467.98125 MED-101
462.9875	467.9875 MED-102
462.99375	467.99375 MED-103

(66) For applications for new radio systems, the thirty-two frequency pairs listed in paragraph (d)(66)(i) of this section will be assigned in a block for shared operation under Sec. 90.20(a)(1)(iii) or Sec. 90.20(a)(2)(xiii) subject to the following:
(i) For uniformity in usage, these frequency pairs may be referred to by channel name as follows:

Frequencies base and mobile (megahertz) (MHz)	Mobile only Channel name
463.000	468.000 MED-1
463.00625	468.00625 MED-11

(ii) Except as provided in paragraphs (d)(66)(iv) and (v) of this section, mobile or portable stations licensed prior to July 6, 2000, must employ equipment that is both wired and equipped to transmit/receive, respectively, on each of the following MED frequency pairs with transmitters operated on the 468 MHz frequencies: MED-1, MED-2, MED-3, MED-4, MED-5, MED-6, MED-7, and MED-8.
(iii) Except as provided in paragraphs (d)(66)(v) and (vi) of this section, mobile or portable stations licensed on or after July 6, 2000, must employ equipment that is both wired and equipped to transmit/receive, respectively, on each of the following MED frequency pairs with transmitters operated on the 468 MHz frequencies: MED-1, MED-12, MED-2, MED-22, MED-3, MED-32, MED-4, MED-42, MED-5, MED-52, MED-6 MED-62, MED-7, MED-72, MED-8, and MED-82.
(iv) Except as provided in paragraphs (d)(66)(v) and (vi) of this section, mobile or portable stations licensed on or after January 1, 2006, must employ equipment that is both wired and equipped to transmit/receive, respectively, on each of these MED frequency pairs with transmitters operated on the 468 MHz frequencies.

(v) Portable (hand-held) units operated with a maximum output power of 2.5 watts are exempted from the multi-channel equipment requirements specified in paragraphs (d)(66)(ii), (d)(66)(iii), and (d)(66)(iv) of this section.
(vi) Stations located in areas above line A, as defined in Sec. 90.7 will be required to meet multi-channel equipment requirements only for those frequencies up to the number specified in paragraphs (d)(66)(ii), (d)(66)(iii), and (d)(66)(iv) of this section that have been assigned and coordinates with Canada in accordance with the applicable U.S.-Canada agreement.

Are there any plans to implement the new channels in the works? Will the newer MED 11-15 EMSCOM channels (453.025, 453.075, 453.125, 453.175, and 460.525) that just became available in the state be given new designators eventually?

It's really interesting what you can find when you browse through the rules. :-) I'm going to post this to a couple of the lists I belong to.

John H. Guetherman

One has to remember that EMSCOM is used as often (if not more so) by small rural fire districts and ambulance services as by larger, more organized entities. Regardless of what the rules say, if brand new splinter frequencies don't serve any purpose in the sticks, local ambulances are not likely to have them programmed. And I can just see the response from a small volunteer fire district's chief told by the FCC that they have to program dozens of useless frequencies in their radios: "Yeah, ok, and you can buy us all new radios with more than the basic channels we need, too." Arizona EMSCOM is not dependant on FCC nation-wide allocations anyway, as our Med-15 proves.

Also keep in mind the .00125 split (not to be confused with .0125) channels are brand new nationwide, and as of yet probably don't have a use.

Also in answer to your question more specifically, I've personally seen just about every kind of radio imaginable used for EMSCOM, from Motorola, Kenwood, Standard, Yaesu, Icom, GE, and more, and from 4-channel to 256-channel models, handhelds and portables. By the way, most departments around the state that use the system don't bother with their own FCC licenses unless they operate bases / remotes. There are a tone of agencies licensed on EMSCOM frequencies, but the number of agencies that use it is many times that.

And there probably aren't too many new licensees, that would fall under the rule requirements anyway, correct? Only radios under licenses first issued since July 6th, 2000 are required to have the Med-12, -22, -32, -42, -52, -62, -72, and -82 channels programmed. And it won't be untill January 1st, 2006, that the radios will be required to have all 40 channels in them.

And 2.5 watt portables are exempted, so if that's all a licensee has.....

460.050, 460.075, and 460.100 are the three new frequencies. DPS got 460.150, 460.175, and 460.200, I believe. Someone mentioned Peoria wanting 460.125?

So, according to what you know, the channel plan would look something like:

Channel 11 462.975 Response-East Valley
Channel 12 460.550 Move-Ups/Posts-West Valley
Channel 13 461.875 Fleet Management Operations
Channel 14 460.950 Operations-Pinal County
Channel 15 460.xxx
Channel 16 462.350 Tactical-West Valley
Channel 17 460.925 Move-Ups/Posts-East Valley
Channel 18 460.xxx
Channel 19 460.xxx Tactical-East Valley
Channel 20 460.xxx Interfacility Transports-Valleywide

Can you fill in Channel 15's useage, at least?

I seem to recall that ch. 16's frequency of 462.350 used to be the west response channel, before it went to ch. 12, correct? Now it's back again.

I still have the old MCSO channels in my PRO-43, so I'll keep an ear on them, and see if I can catch channel assignments.

John
Peoria

p.s. Posting in all capitol letters is considered shouting. It's alot easier to read if it isn't in all caps, as well. Just FYI.

Ch. x 460.100 and ch. 16 462.350 are being simulcast right now by the dispatcher.

AP835 responding on ch. 16. Ch. 16 is still 462.350. (01:13 or so.) Enroute "ALS no fire to Del Webb". (01:33 or so.)

Ambulance 17 available on 460.100. Dispatcher again simulcast on that channel and ch. 16. (01:22 or so.) In quarters, 01:34 or so.

Ambulance 845 (?) on-scene at Chrisridge (?) on 460.100. Dispatcher simulcast. (01:24 or so.)

460.100 Ch. 19 East Tactical, being patched to Ch. 16 West Tactical due to a slow night, perhaps?

John.

I just learned Radio Shack is selling their large VHF-UHF TV antenna usually priced at $100 for $50 P/N 15-2156. It has 9 VHF elenents and countless UHF elements with a corner reflector. This antenna can be mounted vertilally for use as a very directional scanner antenna.

If low band VHF is of no interest to you you can even remove several of the longer rear elements on it. The same holds true for the UHF - SUHF band as well. This is a lot of antenna for $50.

Just for info,
August

2886. Operation Tarmac - 28 Phoenix airport workers arrested

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2002-04-19 07:25:27 UTC
From: freqofnature
Topic: 2886 Message: 2886

PHOENIX, (Reuters) - Federal agents Thursday arrested 28 workers who had access to secure areas at Phoenix Sky Harbor International Airport for using phony social security information to obtain clearance, authorities said.

Agents were still looking for another five workers charged in a federal indictment made public late Thursday, said Mike Johns, a U.S. Attorney's Office spokesman in Phoenix.

The employees, who were illegal immigrants, worked for private companies that provide support services at the airport, including food service and janitorial work, Johns said. They had the security clearance for ramps, runways, aircraft, fueling and food service areas.

"We did not find any evidence during the investigation that anyone of these people threatened to do anything inappropriate," Johns said.

According to the indictment, the employees either lied to get an airport security badge or on an immigration application that was required as a condition for their employment.

Each worker faces up to five years in prison and a $250,000 fine if convicted, and may be deported by the Immigration and Naturalization Service.

Sky Harbor officials said those arrested represented a small sliver of the airport's 14,000 workers and that changes made since Sept. 11 should prevent a repeat.

"This is a nationwide concern," said Suzanne Luber, an airport spokeswoman. "It's important to know that these people were illegal immigrants trying to get jobs.

"I don't think they had a terror motive in any way."

The arrests are part of "Operation Tarmac," an enforcement effort to heighten security at the nation's airports. Investigations already have occurred in Boston, Charlotte, Las Vegas, San Francisco, San Diego, Salt Lake City and Seattle.

In case anyone keeps up with the apparatus around the valley FDs.

You all know that Phoenix Foam 34 (Ex Engine15) is a structural foam truck NOT a CFR/ARFF foam truck. They are purchasing a new rig that is along the lines of the Schwing aerial cement pumping trucks. You can check out what it will resemble at www.schwing.com

since the rig will be so big, it will be moved to station 44 as Foam 44.

Yes indeed, it's fire season in my neck of the woods! We have another blaze in the Huachuca Mtns. This one is called the Merrit Fire, it started around noon this afternoon in Merrit Canyon (which is near Parker Lake), and so far the three tankers that are currently stationed here have been doing continious loops all afternoon! I believe there is two helio's also helping out. Ground crews are there, but comms are impossible to copy from my location. So far the blaze has comsumed approx 500 acres which includes homes and other personal property. Its gonna be a bad one they say. The freqs to listen to are:

169.150 CNF A-G
168.150 CNF Fire Net
123.975 Libby Tanker Base Ops
135.975 Tanker A-A

I hope to have a better round up of who is involved tommorrow morning.

2895. Tucson AZ Scanner Get Together

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2002-04-21 04:44:12 UTC
From: Mark Pagel
Topic: 2895 Message: 2895

For those Pima County Residents that did not get to attend tonight's Tucson AZ Scanner Get Together, we had what I thought was a great meeting.

The new location at Coco's on Campbell worked out well. We were able to have the back room, we had a very energetic waitress who spoiled us rotten, we could order off the breakfast menu or the 55+ menu, and it was QUITE! We could hear each other talk for a change. We decided to have about 3/4 of the future meetings at this Coco's and the other 1/4 at some Central or East location for the nonmajority of our group that live on the East side of town.

We again had a guest appearance from Dan Rollman who hand delivered some of his new SWFD 7th edition books for those of us eager to get our hands on them. He also handed out a Tucson Scanner Frequency Sampler post card to all in attendance. (for those locals who could not attend this meeting, I did manage to snag a few extra Sampler's and will have them available in May).

The theme was Trunking. We talked about equipment, basic programming of a trunked system, and lots of tangent discussions on talk groups within given systems in Pima County. We then had a great discussion on what is "The Best" program for controlling/programming trunk tracking radios. We agreed to disagree!

The meeting started about 5pm and was over by 7pm.

May's meeting will again be at Coco's on Campbell and the theme will be Mil Aero!

Mark Pagel

Channel 19 should be 460.100. It's the only former MCSO channel I've heard active so far, unless one or both of the other two became active in the past day or so. Here's the list, according to the SWFD7, your info, and my monitoring:

Channel 11 462.975 Tactical-East Valley-Mesa, Gilbert, Apache Junction
Channel 12 460.550 Move-Ups/Posts-West Valley
Channel 13 461.875 Fleet Management Operations
Channel 14 460.950 Operations-Pinal County
Channel 15 4xx.xxx
Channel 16 462.350 Tactical-West Valley
Channel 17 460.925 Move-Ups/Posts-East Valley
Channel 18 460.xxx
Channel 19 460.100 Tactical-East Valley-Tempe, Chandler
Channel 20 460.xxx Interfacility Transports-Valleywide

Anybody have any idea what the useage and/or frequency is for channel 15?

What I've seen says 4th quarter of this year: October, November, December. Maybe in time for Christmas?

What Uniden did, was to develop a new base scanner, and a new handheld scanner. You also have to buy a plug-in card in order for either scanner to do digital. Each scanner, *and* the digital card will be in the $300-400 price range, also according to what I've read.

So, you're looking at $600-800 for one radio and the digital card. I'll see if I can find the url for the pics from the CES that are on the web.

(All above information is subject to change. I'm only reporting what I have read elsewhere. I give no guarantee of accuracy.)

Topic: 2900 Message: 2900

Hello Group,
Since the SWFD Vol 7 was printed, Southwest Airlines has abandoned the trunking frequencies they were using at Sky Harbor. According to Dan, those freqs were bought up by (close the kids eyes, I'm going to use profanity) NEXTEL. But SWA had to go somewhere and I would like to know what frequncies they are using now. If anybody knows would you please post a message about it. Thanks, John

From: fyrfotog2@aol.com
Topic: 2902 Message: 2902

The fate of the Laveen Fire Dist (E111 T11) is near.

I don't have all the details as they have not all been ironed out yet. But, C shift on Monday April, 29th 2002 the Laveen Fire Dist (E111 & Tanker111) will cease to exist. At 8am on that day, they will become Phoenix Fire Station 58. At the moment, its not clear what exactly will happen that day. Whether there is adaptive response unit that will run out of there or staffing arranged for Engine 58.

More details to follow.

Hi Dave,

Thanks for the info. Will E58 be responding first due to the former-Fire District areas outside Phoenix city limits, or will Rural be expected to "sort of" cover that area on a subscription bases, the way they do the county area south of Avondale, and the county islands encircled by North Peoria? I say "sort of" because as you know, Peoria responds to calls in those islands, but turns fires and such over to E833 an hour or so into it when they finally arrive. :)

Dan

Here's two Yahoo groups for the scanners:

http://groups,yahoo.com/groups/UnidenBC250D (Handheld)

http://groups.yahoo.com/groups/UnidenBC785D (Base)

Here's the press release which was posted on this group back several months ago:

Press Release

Date: 1/8/02

Title: UNIDEN DEBUTS NEW APCO 25 DIGITAL SCANNER MODELS

SubTitle: Electronics Giant to Sell Software to Customize Monitoring Experience

Synopsis: Uniden lifts the curtain on its long-anticipated APCO 25 digital scanner models.

Body: LAS VEGAS (January 8) - Uniden America Corporation today unveiled its new digital scanner line for 2002, including the consumer electronics leader's much-anticipated base and handheld APCO 25 digital scanning models. Speaking at CES, product manager Scott Carpenter showcased the new scanner products, underscoring the company's commitment to keeping its customers at the forefront of scanning technology. "Our retailers have been pushing us for a Uniden APCO 25 product for months, and our new BC250D handheld and our BC785D base/mobile scanning unit represent the fulfillment of our promise," Carpenter said. "With the ability to monitor conventional, trunked and APCO 25 conventional and trunked systems these models are state-of-the-art radio scanners."

According to Uniden representatives, the Bearcat BC250D and the Bearcat BC785D models, which are slated to hit shelves in late 2002, offer 1,100 channels, 10 banks and a frequency range of 25MHz - 1300MHz. The BC250D comprises all of the features of Uniden's market-leading BC780 XLT in a handheld model, plus adds APCO 25 capability and an additional 600 channels. Users of both models must purchase an APCO 25 card, the BCi25D, separately. "We're pleased to be bringing these great Bearcat APCO 25 units to market," Carpenter said. "We expect more big cities to migrate to the APCO 25 digital technology, like Los Angeles did this past year, to ensure agency interoperability among police, fire, EMTs and the like - and we know news organizations, businesses and consumers will want to monitor their signals." Uniden officials stressed that APCO 25

digital scanning technology simply gives users the ability to monitor the day-to-day activities and signals of standard city and government service departments - but in no way allows users to monitor encrypted signals from national and local security organizations.

In a separate announcement Uniden also announced its plans to market its own easy-to-use scanner programming software, which it is demonstrating in its booth at this winter's annual Consumer Electronics Show in Las Vegas. The software will allow the users of all Uniden scanners with data ports to easily program frequencies into the channels and banks of their scanner.

About Uniden Uniden America Corporation, the North American subsidiary of Japan based Uniden Corporation, manufactures and markets wireless consumer electronic products including cordless telephones, business telecommunications systems, multimedia communications devices, scanner radios, CB radios,FRS, Marine radios and other wireless personal communications products. Based in Fort Worth, Texas, Uniden sells it products through dealers and distributors throughout North, Central and South America. # # #

Might be worth it to keep an ear on the scanner around that time.
I've heard a few of the departments get welcomed by alarm as they
came online.

And my church is in one of those county islands on 75th Ave north of
Thunderbird Rd. Anyone who needs to call 911 for medical help or a
fire is told to specifically request Peoria FD to respond along with
Rural-Metro, as Sta. 193 is only a mile and a-half away, and
Glendale's Sta. 153 is only 2 and a-half miles, compared to whatever
the distance is for Sta. 833.

It's been done once so far, for a chest pains call. Almost comical
though, as the person calling was using his cell phone instead of one
of the regular phones, and couldn't remember the street address of
the church. I heard the call go out while on my way home from
ballooning, and listened to both PD and FD try to figure out just
exactly which church it was in the area. There's another church at
about 77th or 79th on T-Bird. Driving up there to make sure it wasn't
my father having the chect pains, I was talking back at everyone, as
if they could hear me somehow through my scanner. *grin*

Channel 19 is 460.075. Channel 20 is 460.100. I can't seem to hear ch. 19 here at home, but I did hear it weakly on my handheld while running some errands Monday in Glendale/Peoria. That's how I was able to confirm ch's. 19 and 20. Obviously, then, ch. 18 is 460.050.

That just leaves ch. 15 to confirm frequency and useage, and ch. 18's useage.

Channel 11 462.975 Tactical-East Valley-Mesa, Gilbert, Apache Junction
Channel 12 460.550 Move-Ups/Posts-West Valley
Channel 13 461.875 Fleet Management Operations
Channel 14 460.950 Operations-Pinal County
Channel 15 4xx.xxx
Channel 16 462.350 Tactical-West Valley
Channel 17 460.925 Move-Ups/Posts-East Valley
Channel 18 460.050
Channel 19 460.075 Tactical-East Valley-Tempe, Chandler
Channel 20 460.100 Interfacility Transports-Valleywide

Very interesting. I like the dynamic memory banks. I'd really like
to decide for myself how many memory channels go into a bank. At
least in groups of 10. In my scanner, I'd like to have

Bank 1: 10 channels with Peoria Police conventional, and the City
trunked system
Bank 2: 10 channels with VHF and UHF LE Mutual-Aid, and the 800 MHz
interagency channels
Bank 3: 10 channels with Glendale Police/City trunked system
Bank 4: 10 channels with West Valley PD's on conventional channels
Bank 5: 30 channels with Phoenix FD's A-Deck and Blue Deck channels
Bank 6: 20 channels with outlying West/North Valley FD's
Bank 7: 20 channels with Phoenix PD VHF and airband
Bank 8: 10 channels with Phoenix PD UHF
Bank 9: 20 channels with DPS statewide
Bank 10: 20 channels with DOC/DOJC, and Capitol PD and Legislative
Security
Bank 11: 30 channels with Game and Fish and State Land statewide
Bank 12: 30 channels with Maricopa County's White Tanks/Oatman
Mtn./Smith Peak/Yarnell Hill trunked system sites, and various county
agencies
Bank 13: 20 channels with Maricopa County's White Tanks trunked
system site, and Surprise PD/FD and Sun City West Sheriff's Posse

So far, that's 240 memory channels. Not all channels would be used
in every bank. I'd still need to put in the East Valley stuff. And
maybe some stuff from other areas of the state.

No CVSS needed. #1 lane blocked by FD apparatus, DPS requesting they move ASAP.

BTW, the time stamps I'm seeing are an hour ahead. It's about 5:57 by my clock, and DPS just gave 5:54. Time stamp says 6:55.

John.

Anyone know what is going on on Phoenix FD channel 9 tonight?

I've been hearing that they are sending folks to the hospital (tens of folks, not just one or two), sending 20 or 30 others home "with precautions" and about gathering samples to turn over to PD.

I also just heard something about deconning the FD personnel and a bus. Now there is something about sending another entry team in to "check the other registers".

This another anthrax scare or something else?

John

Well, now that I decided to post to see if anyone else had gotten in on
the beginning of this incident, they just announced that the additional
entry team is just being sent in to check and/or decontaminate "a couple
of other cash registers" and that command is now terminated.

<sigh> I guess I'll have to watch the news now..... :-(

I was wondering if there's someone up near Dewey who can monitor the General Mobile Radio Service channels 462.550-462.725. I was told that there are a high number of residents getting licensed for the service, and was wondering about the reason for the sudden surge.

Note that the split channels, 462.5625-462.7125, are shared between the GMRS at 5 watts ERP and the Family Radio Service, (FRS), at 500 milliwatts ERP.

The main channels have a 50 watt power output limit, with no ERP limit.

Thanks for any help.

BTW, in the Miscellaneous listings in the SWFD7, the new Multi-Use Radio Service, MURS, was left out. 151.820, 151.880, 151.940, 154.570, and 154.600. 2 watts ERP. Personal and business communications are permitted. FCC 47CFR Part 95, no license required.

Dan,

I can't swear to much as things are still very "up in the air" with Station 58. Thats another question I will jot down to ask. Another is the seniority for the ex Laveen FFs.
The plan is the Laveen personnel will go through an abbreviated Phx academy then go on their rotations just like any other booter out in the academy. The pay for the ex Capts will go down temporarily, but will go up to TOP FF pay once their proby time is up and they are FULLY integrated into the Phx system. The ex Laveen FFs however will be a different story. Just the same Phx pay rate. They are not to be assigned to Sta 58. They will go into the system and bid for stations or become rovers if they choose.

Hope that helps a little

David

Laveen Station 111 will become Phoenix Fire Station 58. They will certainly have Phx Firefighters there. The Laveen people come into the Phx system as Phx Firefigthers. See my newest post as to what they will be doing in the 1st few weeks.

Some may get assigned back to old 111 but it will be only for a short period.

I wonder if they are getting licensed at all. Right
now there is a flood of new very low cost handheld□s on
the market for GMRS. I was at target yesterday, and
they had 2 different ones under $40.

This is a quick reminder about the upcomming ICP Get Together in Phoenix this next Saturday the 23rd of Feb at the Fudruckers on Highland just East of the A51. We meet at 6:00pm and usualy go until 8:30-9:00 (sometimes later out in the parking lot or over on Air Lane by the Airport). Everyone is welcome and you do not have to belong to ICP to attend. We are there for the enjoyment of chatting about scanners and related topics and we generally have a great time. ICP is just the sponser of the get together and several ICP members are usually there as well.

Come on out and say hi!!

Thanks Jerry. I was notified by R. K. "Bob" Leef, KB6DON, about the sudden surge in licensee's in Dewey, and he asked me if I knew anything about it. I told him I'd ask here, and let him know if I found out anything. He had figured it would be for a Neighborhood Watch or C.E.R.T. program.

I'll be relicensing myself in a few weeks. My former KAE7927 license accidentally expired last November because I had problems getting into the FCC's website to renew, then I have had $$$ shortages. Now I have to get a new callsign, they won't let me keep the old one. *frown*

Thanks again.

Michael, yes those "bubble-pack" radios are already a pain for legitimately licensed users. Especially repeater owners. And the GMRS/FRS hybrids like the Motorola T6400 and T7200 are only going to make it worse. The license requirements are typically in small print, and are frequently ignored by the average consumer. Check out the "GMRS" group here on Yahoo, and the PopularWireless BBS at http://www.popularwireless.com/cgi-bin/Ultimate.cgi under the Family Radio Service and General Mobile Radio Service forums.

2930. Country Thunder

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2002-04-26 18:00:25 UTC
From: Dan Rollman
Topic: 2930 Message: 2930

I was reminded by another ICP dispatcher (www.incidentcommandpage.com) that Country Thunder is this weekend in Queen Creek. As most local avid scanner listeners know, this event often seems to cause the east valley air ambulances to turn in to the equivalent of "shuttle busses" shipping patients from the event to hospitals all day and night.

Apparently MCSO is using Special Details D for operations, and may also use Special Details E. These are the two analog talkgroups used most often at special events. Rural / Metro would be on Ch2, or possibly Ch5.

The event usually makes for good listening. I think in the past they've ended up with a farely steady "stream" of public safety incidents throughout, and then top it with one or two "big" incidents at some point (one year it was the dust storm and a major medical incident of respiratory problems, one year it was the partial collapse of some side stage, etc.)

Don,
The article states that the ordinance would only affect scanners
used in Motor Vehicles. I don't know if this would include a hand held
scanner not mounted in the vehicle or a 2way radio with scanning
capability. I am not sure what has prompted this idea, but I think it
stinks and have emailed the Mayor and several council members. Also I don't
know if any "reserve" (used to be volunteer) firefighters with Buckeye or
the Fire Dist. would be exempt as well as police officers on or off duty.
Guess we'll have to wait and see.

Not to mention that there is nothing preventing state and local laws
from being more restrictive than federal laws. Homicide, for example, is
not a violation of federal law. I'm looking forward to seeing the
language of the ordinance to answer the rest of your questions.

It would be interesting to know what they define a scanner as. As mentioned previously a 2 way radio such as a CB or FRS radio in search mode could be a "scanner" and what about your AM-FM radio in your car, you can SEEK/SCAN for radio stations. ---Charlie

I hadn't seen a mention of it in the Digest, so I thought I'd mention
the fact that Davis-Monthan is having their big air show this weekend:
Aerospace & Arizona Days 2002.
Check out http://www.dm.af.mil/AA/Default.htm.
Should be some good listening.

Armand Sperduti.

Kevin,
Didn't know that, when did they plan this? Not surprising though,
the new chief has some rather different ideas.

--- In ArizonaScanner@y..., Andrew Clark <andyclark@c...> wrote:
> Not to mention that there is nothing preventing state and local laws from being more restrictive than federal laws. Homicide, for example, is not a violation of federal law. I'm looking forward to seeing the language of the ordinance to answer the rest of your questions.

Hams are exempt from anti-scanner laws, but only so far as their Amateur radio equipment is concerned. Scanners owned by them are not covered.

http://www.arrl.org/announce/regulatory/pr91-36/pr91-36.html

PR Docket 91-36

PR Docket 91-36 is the federal preemption of state and local laws concerning amateur use of transceivers capable of reception beyond amateur allocations. This preemption allows amateurs to possess a transceiver capable of reception (but not transmission) on frequencies adjoining the amateur VHF/UHF bands. It does not apply to scanners which are separate from an amateur transceiver.

What constitutes a scanner?

http://www.arrl.org/news/stories/1999/04/07/2/

The FCC defines it as:

"...the definition of a scanning receiver to include receivers that automatically switch among two or more frequencies between 30 and 960 MHz and are capable of stopping at and receiving a detected signal."

If enough people object, it may be possible to prevent the town from enacting any anti-scanner law. Obviously, the most effective voices will come from folks living within the city limits, and to a slightly lesser extent, from those in the immediate surrounding area.

With that said, what are the emails for the various council members, etc.? Is anyone here a member of the ARA or any of the other local ham clubs in the Valley? They may be able to help come up with a good "defense" for scanner hobbyists and professionals who use scanners.

4 Dead In Nevada Casino Shooting

Clash Of Motorcyle Gangs Blamed
Posted: 9:59 a.m. EDT April 27, 2002
Updated: 10:16 a.m. EDT April 27, 2002

LAUGHLIN, Nev. -- Four people have been shot and killed at a casino in Laughlin, Nevada.

Eight others have been wounded, according to KGMN, a radio station in Kingman, Ariz. Authorities have confirmed the deaths.

Hospital authorities say at least nine people were shot or stabbed.

The spokesman for the Bullhead City Arizona Fire Department said no one can drive in or out of the city.

He said the shooting occurred on the first floor of Harrah's during the 20th annual River Run. The large gathering of motorcycle clubs brings up to 80,000 people into the gambling resort.

A spoeksman at the casino said there was a fight between motorcycle gangs.

The radio station reports that about 100 people were taken into custody and bridges over the Colorado River were shut to traffic.

This will backfire on them most likely. Unless they put in language to exempt licensed two-way radios that have broadband receive capability (like Amateur Radio).

Mike,

That is a pretty bold statement. Can you give us all some more background on your legal expertise and the research you did to come to that conclusion, or are you just telling us you've never personally heard of such a city code violating federal law? Federal laws often pre-empt state and local laws. For a foundation, see 331 U.S. 218, 230 from back in 1947.

Apparently you weren't aware that Don Johns is exactly right when he says "case by case" basis. Depends on the circumstances. It IS in fact in violation of federal law (in the form of an FCC regulation, FCC PRD 91-36) to prohibit licensed amateur radio operators from having and using wide-receive ham radio scanners in vehicles. And remember that federal regulations in most applications carry the same weight as congressionally-enacted federal law. (See 458 U.S. 153) Mounted or not. Moving or not. On PD freqs or not. So scanning Buckeye PD UHF on my TM-V7A along with fire and other frequencies is
perfectly legal, and there's nothing the town of Buckeye can do about it. 'Course they can cite me, and then I'd have to go challenge them, which for some can be more trouble than it is worth. If they move to a trunked system, it would be a different animal.

As Andy said, it certainly will be interesting to see the language of their ordinance.

Dan or Mike or anyone else {espically the person who initially posted the message} can't you go to city clerks office and look @ packet of info & data given to each council person PRIOR to meeting and read for yourself the language of the proposed new ordinance? There might also be some background info from several research sources.

2949. Sum Interesting Comms

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2002-04-27 21:59:43 UTC
From: d1033
Topic: 2949 Message: 2949

This morn about 10:00AM some interesting comms tween command post and officers in the field. Seems that part of the long term planning for the River Run in Laughlin was to apply for and receive a permit to have a gun show on this side {Bullhead City} of the river @ the Chamber of Commerce {a for profit enterprise}. Well in keeping w/the spirit of what occured @ approx 2:30AM {seige @ Harrah's w/shoots fired}it seems as tho the Chamber was gonna go ahead and have there gun show anyway. WRONG!

Ya see, a police officer was driving by and noticed that vendors were setting up and bikers were arriving to prowl around & do what ever one does @ a gun show. Well, this officer had some concers about this particular activity & placed a call to the command post. Command rank {Chief} officers overheard the inquiry from the officer in the field and instructed him to tell Chamber rep's that during the early moring hours of this date the three powers that be {Police Chief, City Attorney & Mayor} had taken action to revoke that permit & that the Chamber had been notified PRIOR to admitting vendors & bikers.

As it appeared the event was about to get underway, the Chief made it clear that the event would not take place & that a number of persons were going to jail if it did. @ this important point in time an ATF agent was heard to say that he would go over to Chamber and indeed the gun show would not take place, the Chamber exhibit rooms would be vacated and everyone on the property would be asked to leave forth with.

The End

An awesome scanner resource and highly recommended by me!!!

Remember the upcomming ICP Get Together is Today Saturday the 27th at the Fudruckers on Highland just East of the A51. We meet at 6:00pm and usualy go until
8:30-9:00 (sometimes later out in the parking lot or over on Air Lane, East of 40th ST by the Airport). Everyone is welcome and you do not have to belong to ICP to attend. We are there for the enjoyment of chatting about scanners and related topics and we generally have a great time. ICP is just the sponser of the get together and several ICP members are usually there as well.

Come on out and say hi!!

Did anyone go to the show today at Davis-Monthan AFB? I haven't seen anything posted by anyone. Unfortunately, I was in Phoenix, so couldn't go today. But, I did record the DM Tower and Ground frequencies while I was out.

I'm still listening to the recording, but can anyone confirm that the Ground freqs - 121.8 and 275.8 were the Airboss freqs?
I also heard them reference contacting the Airboss on the Tower freqs of 118.85 and 253.5.

Callsigns heard so far:
Death-31 and -41 - B-2's
Dog-80 - ??
Stealth-51/52 - F-117's
??-71 - ??
Air-1 - Tucson PD Helo
58K - ?? - He released something about 13:22 local

Were there any additional frequencies used?

Thanks,
John

Indeed if you have a license to have such equipment then obviously you can do it.
From my understanding, in speaking with the reporter who wrote the article, the law is pretty clearly written to include "receive only" type scanners. Basically, the way she understood the law, it would forbit joe-schmoe off the street from going to radio shack and buying a "police scanner" to be used in his car. I guess its like many other laws out there, there are exceptions. Perhaps the isue of concealed weapons. It is illegal to carry a weapon concealed in Arizona, UNLESS you have a permit.
If you are a ham, then would have a permit in essence to carry the proper ham radio equipment.

My response was merely responding to the thought of such a law impeding on one's rights to just go buy a scanner at Radio Shack and then be forbid to use it in his car. Without any special permits carried by the owner of that scanner, such a law would not violate any federal or state laws.

Hope that clears things up.

I have requested a copy of the article be emailed to me, but so far no such luck. I'll post it if I get it.

Mike

I understand. I was just curious how you knew this so confidently. I just don't really take as fact, without further research, the legal advice I get from a journalist. But if others do, they are certainly free to do that. I just thinks it's nice to provide some background (cite a case or two, etc.) when sharing very firm ("this would NOT violate...") legal oppinions with the list. One could also just say their legal knowledge came from a reporter, and then we'd be able to say "ahh, ok" and quickly move on. :)

Those at the meeting yesterday saw the article that Kevin Wiley brought in. Thanks Kevin! It had three or four sentences that briefly mentioned the scanner law, so it didn't say much of substance. It will be interesting to see the text of the ordinance itself.

Dan

2954. Multiple scanner help...

Date: 2002-04-28 16:16:06 UTC
From: John LaBua
Topic: 2954 Message: 2954

How would one go about having multiple scanners (different antennas) working in near vicinity to each other?

I have a Pro-2046 that is picking up some terrible interference from my BC780XLT when placed very close to each other. The 2046 is using a telescoping antenna and the 780 is using an external antenna on the roof.

I realize it would be better to have them both using antennas that are outside, but can't do that right now. Is distance my only friend in this case?

Thanks for any help anyone can offer!

John

2955. Phoenix - 453.150

City of Phoenix has applied for a license on 453.150, with repeaters on South Mountain and Thompson Peak. It is currently pending. Wonder what it may be used for? South and Thompson would give it real nice coverage around the valley.

John,

I did not make it to the show but did turn the 780 on and found a lot of a lot of talk on 148.300 AM and 148.53 FM. There was a lot of what sounded like PD, food etc, on 148.53. I have 148.300 down as the 355th CAM but still active here on sunday.

Kelly Thanks :)

After listening to my recording, 123.15 was mentioned as the show freq for
Sandy-1 (A-10 Demonstration). Today, I've heard show acty on an old airshow
freq of 123.40mhz.....

Here is what I have currently:

118.50 - Aircraft to Narrator - played on PA system
118.85/253.5 - Airboss (Tower)
121.8/257.8 - Airboss (Ground)
123.40 - First thing this morning, used by aerobatic acft
148.3 (AM?) - Airshow-1 with Airboss and Narrator
148.53 (FM) - Airshow-2 with Oscar, Media Tower, Media Control, Rover, PA, Exhibit, and Photo...basically ground personnell working at the show
119.5 - Mentioned by an aircraft - heard nothing.

Bruce, can you confirm that 148.3 is the correct freq and AM or FM?

Thanks,
John

BOY OH BOY... I think we are in for some exciting scanner action this season!!! We have another fire down here in Cochise County.... This one is the RYAN Fire... its located somewhere north of Cannelo (look a wee bit south of Parker Lake along 83)... estimates are 500-600 acres so far (just heard that one!), it started somewhere around 1400 this after Heres the freqs for now:

168.150 CNF Fire Net
169.150 CNF A-G
123.975 Libby Tanker Base Ops
135.975 Tanker A-A
118.950 Helio A-A

ASSETTS (so far)
Tanker 21 P3
Tanker 25 P3
Tanker 65 DC-4
Tanker 130 C-130
Helio 212 Type 1 helio

73's Donnie

Somewhere in the "pucker brush" near
Libby Army Airfield
Ft Huachuca Az

From: jhguetherman
Topic: 2894 Message: 2963

4 Confirmed CTCSS updates, 29 April.

Channel 9 155.235 Dispatch/Paging PL 85.4
Channel 11 462.975 Tactical-East Valley-Mesa/Gilbert/AJ
Channel 12 460.550 Move-Ups/Posts-West Valley PL 156.7 (Not 77.0)
Channel 13 461.875 Fleet Management Operations
Channel 14 460.950 Operations-Pinal County
Channel 15 4xx.xxx
Channel 16 462.350 Tactical-West Valley PL 151.4
Channel 17 460.925 Move-Ups/Posts-East Valley
Channel 18 460.050
Channel 19 460.075 Tactical-East Valley-Tempe/Chandler
Channel 20 460.100 Interfacility Transports-Valleywide PL 146.2

I can't hear the East Valley channels 11, 17, 19 here at home in Peoria.

The SWFD7 has 77.0 listed for channel 12. I'm monitoring 156.7 at the moment.

Something I've been wondering. Channels 1-10 are EMSCOM, correct? If so, why is dispatch channel 9? (A holdover from an older Rural-Metro channel lineup?) And why is Med 10 also channel 11?

What are the definitions for the various types of helo's?

Also, what are the definitions of the various types of engines? I know it has to do with water capacity, and in the case of engine companies, hose types and length's, and crew size.

Can anyone give an example of engine's in the Valley for the various types? (Standard structural engine is a Type 1. El Mirage BR122 is a Type 6. Any Type 2's, Type 3's, etc?)

Thanks DJ. Med 10 and channel 11 are the same frequency, do you know why they set it up that way? And do you know what the frequency and use is for channel 15, or the use for channel 18? They're the only two holes in the list.

This is what I have so far (0735), the tankers havent launched as
of yet, but there are 2 helios in the air as of now. Heres what I have
for freqs:

122.850 Rotor wing A-A (new freq for today)
169.150 CNF A-G
169.600 CNF Forest Net (for sit reps)

I am also getting comms on 163.100, it seems to be fire related,
but I have no idea who/what?? I know that this is a NIFC freq, but as I
said, no idea who is using it currently.
123.975 Libby Tanker Base Ops, just lit up, so the tankers
will be flying soon (aprox 30-45 min).

From: Don Armstrong
Topic: 2972 Message: 2972

It would appear that there is too much interference on the
122.850 (rotor wing A-A) freq (Coolige UNICOM) so it will probably be
changing... I do have the fixed wing freq:
123.075 Fixed wing A-A

I just heard the Air Attack say that the Rotor Wing A-A will be
the same as yesterday... 118.950...

So here's a recap:

123.075 Fixed wing A-A
118.950 Rotor wing A-A
169.150 CNF A-G
169.600 CNF Forest Net
123.975 Libby Tanker Base Ops

From: Temp Berdan
Topic: 2975 Message: 2975

Hi,
When I was in CA, I used to get the "NCIC (now NIFC) Morning Fire Report",
via a subscription.

Since I have moved and the NCIC has changed to NIFC and I cannot find the
web site where one subscribes to this interesting report.

Anyone got it???

Thanks much,

Temp

2976. RYAN Fire Evening Update:

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2002-05-01 03:45:54 UTC
From: Don Armstrong
Topic: 2976 Message: 2976

Well boys and girls... it's been one hell of a day for scanner listening!! The freqs I passed along this morning were burning up the speaker!
123.075 Fixed wing A-A
118.950 Rotor wing A-A
169.150 CNF A-G
169.600 CNF Forest Net
123.975 Libby Tanker Base Ops
168.150 CNF Fire Net

I wish I could pass along all the air assets that were in use today but I really wasnt able to keep any kind of list (work kept getting in the way!) but I can tell you that there was approx 4 helio's involved and about 6 tankers, 2 P-3's, 2 DC-4's, and 2 C-130's and others that I cant keep track of!
Well, the last 90 minutes (posted at 2045 local) or so has been turned over to ground units, Ft Huachuca FD, Huachuca City FD, Whetstone FD, Fry FD, Sierra Vista FD, and a few other units from Palominas and Bisbee. The only kind of sit rep I can give you'all is that this morning they were estimating roughly 2000 acres burned, and as of dark o'clock the estimate was 10,000 acres... so in 12 hours it burned up 8000 acres, and the majority of it is now on Fort Huachuca. I can tell you this... I can see the fire line from my front porch, and evacuations are in the ready for both Ft Huachuca, Huachuca City and possibly Whetstone during the next 12 hrs or so. This fire is not any where close to being "under control". The last hour of daylight was devoted to doing slurry runs around Huachuca City and the airfield itself!

Heres the freqs to listen to as of right now:

Ft Huachuca FD 172.325
Huachuca City FD 155.430
Fry FD 155.865

The majority of traffic is on the first two (Ft H and HC FD). I dont mind telling you'all... it's getting down right scary out there! The smell of smoke is everywhere. I think it's going to be a long night!!

73's Donnie

Temp,
Go to Southwest Area Wildland Fire at:
www.fs.fed.us/r3/fire. Click on Fire Intelligence then
scroll down to the National Situation Report, Download
PDF Reader and you will have something much like the
old NCIC reports. This is a very good site. Checkout
the SIT 300 report for the Southwest Area.
Take Care, John Nolan

From: irsars
Topic: 2979 Message: 2979

question for the local tucson area people.
i have in the last two days heard a lot of traffic on the
gateway channel uhf, dispatcher indicates gateway when communicating
and was dispatching to "TUCSON RANGER" then she called some 800
numbered units about 8 of them that were located from congress street
downtown to speedway and river view and a few inbetween locations.
she also made comment about a motor unit at the end of the wash and
made a few references to tpd units, who or what is tucson ranger(s)
and what units are number in the 800 series???? anyone know...
i have my scanner on daily to and from work and at home, and have had
the gateway freq's programmed for a year or so, and this is the first
time i heard traffic especially so much in the last two days and
almost 45 minutes or more and with steady and regular transmitting.
just curious, thanks all

Tucson Ranger is the Arizona DPS Ranger helicopter. See Page 23 in the new 7th edition Southwest Frequency Directory (www.scannerstuff.com) for a complete list of Ranger (and other) helicopters, with their names and base locations.

800 units are DPS (Highway Patrol) District-8 units, since the Tucson area is District-8.

thanks for the info Dan, and I tend to agree to your statement, because that is what I figured, I use your directory as a bible, however "tucson ranger" was on foot in a wash by the rilito river area on a mobile handheld it seemed and concurrently on the district 8 channel tucson ranger was barely 10-8 enroute to east pima county area????? and unit 813 was out on a traffic stop on 1-10 however within minutes unit 813 location on triband/gateway was given has riverview and speedway, so that's why i posted this question because it blows a hole in that theroy, unit 811 and 820 is the other numbers I remembered but others where transmitting, local tpd channels in the area's covered by the triband transmissions had no special activity going on, so point of jurisdication of why having dps units within city areas like that on foot, no "noise level activity as most air units", and each transmission of ranger was on foot, you could tell the power reception, then about 20 minutes later ranger trasmission was louder and stronger indicating in unit and proceeding up the wash>>> and other interesting thing was a male dispatcher came on around 1pm and advised that they were closing triband(almost sounded like the dispatcher that was on @oro valley main dispatch channel.... more interesting and less convincing that it was dps related... just my input...

Ok, well, 800 series units could also be Pima County Sheriff. They just go by badge number, and 800's are valid badge numbers. "Tucson Ranger" I suppose could be what a park ranger was calling himself, but that seems remote. Your guess is as good as mine, then. :)

2983. RE: [ArizonaScanner] TUCSON RANGER

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2002-05-02 00:44:26 UTC
From: Michael Todd
Topic: 2981 Message: 2983

Is it possible that one of the Tucson Ranger Crew members was on the ground and calling himself Tucson Ranger?

Here in phoenix, "Engine 1" is the captain on that engine.
If he's in an ambo riding to the hospital, he is still "engine 1".
The Engineer is "pump 1" and the firefighters are techinically "engine 1a" "engine 1b" etc.

The trick to this comes in play when they are off duty. Take for example today is "b shift" if the A shift captain is to make a radio call, he'd call himself "Engine 1 A Shift". I guess it's a bit tricky with the A's and B's etc.

So, perhaps that is the case with Ranger. Maybe it was a crew member working on the ground. Up here, most of those guys have call signs when they are not in the aircraft such as "Air 1". Air 1 is the chief pilot, and uses that call sign when he's not in the aircraft.

Man I think I have confused myself on this one, but maybe you can sort it out!

Mike

From: jhguetherman
Topic: 2984 Message: 2984

Heard something strange on the scanner today. Phoenix Alarm told 705 to go back in service, because Support 12 was ALS and would take it. (Didn't hear the original call.)

Was I hearing things, or is Support 12 capable of handling ALS medical calls on it's own? Maybe several FF's were returning from a training exercise with Support 12, and decided to jump the call?

I heard this about 3:50pm. Just curious.

The Laveen Fire District still exists. They have contracted the protection to Phoenix FD, and Engine 58 went in service as advertised Monday AM.
On the subject of what happened to the former Laveen FD paid staff, one is curious to know if "Hoot" Gibson retired (again) or managed to get back into the PFD.

INCIDENT MANAGEMENT SITUATION REPORT
THURSDAY, MAY 02, 2001- 0530 MDT
NATIONAL PREPAREDNESS LEVEL 2

CURRENT SITUATION:

Initial attack activity was moderate in the Rocky Mountain Area and light elsewhere. One new large fire was reported and contained in Eastern Area. Very high to extreme fire indices were reported in Arizona, Colorado, New Mexico and Texas.

SOUTHWEST AREA LARGE FIRES:

PENASCO, Lincoln National Forest. A Type 1 Incident Management Team (Bateman) is assigned. The fire, burning in mixed conifer forest, is 12 miles southeast of Cloudcroft, NM. Extreme fire behavior contributed to the loss of most firelines. Steep terrain, high winds, low relative humidity and heavy fuels are hampering containment efforts. Evacuation of local residents remains in effect and the mandatory evacuation area has increased significantly in size. An evacuation center has been opened at Cloudcroft High School. Twenty primary residences were lost and the town of Mayhill is threatened.

RYAN, Coronado National Forest. A Type 1 Incident Management Team (Humphrey) is assigned. This fire is 16 miles east of Patagonia, AZ. Moderating winds allowed significant progress on most divisions of the fire.

INCIDENT |ST|UNIT| SIZE | % | EST |TOTAL|CRW|ENG|HELI|STRC| $$$

OUTLOOK:

*** A FIRE WEATHER WATCH HAS BEEN ISSUED FOR SOUTHEASTERN ARIZONA AND PORTIONS OF NEW MEXICO FOR STRONG WEST TO SOUTHWEST WINDS AND VERY LOW RELATIVE HUMIDITY ***

A weak cool front moving into the Southwest Area will bring mostly sunny to partly cloudy skies. High temperatures will be in the 50's and 60's in

the mountains and in the mid 80's to mid 90's at lower elevations. Minimum relative humidity will be in the single digits in southern New Mexico and 10 to 30 percent across the remainder of the area. Winds will be west to southwest at 10 to 20 mph over much of the area, gusting from 35 to 40 mph in southern New Mexico and southeastern Arizona.

A low pressure system moving into the Rocky Mountain Area will bring partly cloudy skies with a chance of afternoon showers and isolated thunderstorms. High temperatures will be 45 to 55 degrees at higher elevations and 55 to 65 degrees over the foothills and plateaus. Minimum relative humidity in western Colorado will range from 12 to 25 percent. Winds be westerly, gusting from 25 to 40 mph over the higher terrain of western and southern Colorado.

A weak low pressure trough over the Southern California Area will bring sunny to partly cloudy skies. High temperatures will be in the mid 50's to mid 60's in the mountains, in the mid 60's to mid 70's in the valleys, and in the 70's to the 80's in the deserts. Minimum relative humidity will range from 25 to 40 percent in the valleys and mountains, and 10 to 20 percent in the deserts. Winds will be west to northwest at 10 to 20 mph early in the day, diminishing to 6 to 12 mph by late morning. Coastal areas will see onshore afternoon winds at 5 to 10 mph.

No, then his callsign would be AIR XXX
"Tucson Ranger" is for the bird, not the crew.
Same for Phoenix and Flagstaff. Not sure about western air rescue.

Give the web site a try. I still get it daily. They do publish it during the
winter, but on a weekly basis on Fridays.

2990. Re: Laveen FD

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2002-05-04 03:25:26 UTC
From: fyrfotog2@aol.com
Topic: 2920 Message: 2990

Ed,

So many things had to be worked out by 8am the 29th. From what I understand, the Laveen Fire Dist under the Laveen Fire Dept does not exist anymore. I will have to double check now that its the end of the first week of Station 58 and see what its called.
I am pretty sure they did NOT have an Engine 58 in service at 8am. I believe Engine 710 was down there briefly. They also told me that the community of Laveen will stay the same at least until Phx annex's the rest of it. The field on the west side of the station is Phx as is the one across to the south. But the fire station is in Laveen.

And as far as "Hoot" Gibson, he got a Phx Fire Dept identification card like the rest of the Laveen guys and are now part of the Phoenix Fire Dept. I was told he will be some type of District/blah blah blah type of Chief for the area. Then maybe after a while he will go back to resource. Go figure.....

I will however check it all out with him next week and keep you all posted. As they said in Laveen, the absorbtion of the Vol Co's back in the 60's or so in the Sunny Slope & S. Phx areas was not well or documented at all. So all this take over is new and lots to work out.

2991. Peoria PD

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2002-05-04 05:25:12 UTC
From: jhguetherman
Topic: 2991 Message: 2991

Listening to them now. Heard a unit go in service, and tried to clear as a "Charlie" unit, (3 Charlie 22, for example) indicating he had a civilian observer ride-along with him. Dispatch told him they no longer had "Charlie" units. They simply noted he had a ride-along.

Callsigns I have heard within the past several weeks:

Adam 804, 807, 808, 809, 810, 811, 812, 817, 819 (Police Service Officers, includes animal control, accident investigation, traffic control, etc.)

George 10, 11 (Day shift sergeants)

George 20 (Swing shift sergeant)

George 30 (Night shift sergeant)

Patrol 10 (Day shift Lieutenant, heard referred to, formerly Lincoln 10)

Patrol 20 (Swing shift Lieutenant, formerly Lincoln 20)

Patrol 30 (Night shift Lieutenant, formerly Lincoln 30)

Charlie 30 (Detective sergeant of some sort?)

Charlie 332, 333 (Detectives of some sort?)

Mary 551, 555, 556, 557 (Motor officers)

Victor 70 (Not heard recently, I believe I have heard a Victor 7xx unit or two recently. Detective sergeant of some sort?)

John 334 (No idea)

Sam 675 (No idea)

Sam 789 (may be K-9, formerly King 9x, heard a dog in the background a few times, not recently)

William 661, 662 (Bicycle officers, I believe, heard recently)

Tom 132, 143, 230(?), 234, 241, 342 (Field training officers with rookie officers, heard recently)

Nora 240 (Not heard recently, QRT like Phoenix PD?)

Current units on this evening:
222, 223, 224, 232, 242, 252, 262,
322, Tom 332, 342, 352, 362

George 20
George 30
Bravo 230 (Just went 10-8, reserve officer, I think)
Sam 789

John H. Guetherman
KB7MIB/KAZ7FA/KBKF9922/SSB-83T/KAE7927 (expired)
Peoria, AZ.

p.s. Trivia: At last count by the International Association of Chiefs of Police, there are 18,769 state and local law enforcement agencies in the U.S., employing 663,535 officers.

FEMA's National Fire data center reports that there are 26,354 fire departments in the country, with 1,064,150 career and volunteer firefighters. On average, a fire department responds to a fire in the United States every 18 seconds.

Of interest on NOVA:

http://www.pbs.org/wgbh/nova/fire/

Welcome to the companion Web site to "Fire Wars," scheduled for broadcast on May 7, 2002. In the program, NOVA accompanies the men and women of a wildland firefighting crew known as the Arrowhead Hotshots as they battle one of the most destructive wildfire seasons ever, the summer of 2000. Here's what you'll find online:.....

Now that looks really interesting. Especially:

Wildfire Simulator (Hot Science)
Use this simple fire-growth computer model, developed by NOVA Online, to see how conditions such as wind speed and direction can affect the spread of a wildland fire. Also, try your hand at using virtual firebreaks and backfires to control a wildfire.

The video will be available May 28th.

From: Dan Rollman
Topic: 2994 Message: 2995

Only interesting new license issue I noticed...

More new frequencies for Southwest Ambulance?

462.250 and 462.450 repeaters on White Tanks and down in Casa Grande.
462.300 and 462.525 repeaters on Usery and in Fountain Hills.

Don Johns or anyone else have any info on these?

Dan

Shhhh .. they are for spying on drug dealers and taggers. Look for
licenses in the 2Ghz range in the FCCs land mobile broadcast database.

Actually, it wasn't all that large. Wednesday's Arizona Republic said 30 acres, I think.

It started as a car fire that Avondale FD thought was out earlier in the morning. Guess not. Most traffic was on the 122.225 Victor channel, which all aircraft used. (123.025 was used intially by the helo's, untill air attack came on-scene.) BLM's 168.300 and R/M's Ch. 9 155.385 repeater were close behind, although I could only hear BLM's base and aircraft, not the Hotshot crew that the paper said was there.

There was some traffic on State Land's 151.400 repeater. Most likely, mutual-aid 154.280 was being heavily utilized, but I couldn't hear it up here. Phoenix channel 9, 155.670 is the standard tactical channel down there, but again a simplex channel I couldn't hear up here.

The air tankers were released at around 4:30, and the BLM 1 Kilo Aplpha and the DPS Ranger 41 helo's continued with bambi buckets. Saw 1KA RTB'ing northwest towards Deer Valley airport around 7:15-7:30pm. Hand crews and brush trucks probably stayed overnight mopping up.

Sorry I didn't post an update. The Arizona Republic's website may have the story archived, it was on the front page.

If you sent an attachment with a picture, we didn't get it, since attachments are not permitted on the ArizonaScanner list. I believe Dale was asking where in Arizona you observed the transmitters you are wondering about.

Drive around the perimeter of ASU West. Along Thunderbird Rd. and
Sweetwater Ave. between 43rd and 51st Ave.

And frequency counters won't work to capture the channels they use.
There was a thread on socalscan about them.

As a matter of fact, there was a thread here on ArizonaScanner a year ago. Here's some stuff I had posted then.

The system runs at 128Kb/s, in the 900 MHz range, spread spectrum. The antenna is a no ground-plane design. Ricochet had a technical page (it's not working at the moment) at:

www.ricochet.com/ricochet_advantage/benefits/home/technology.html

Ricochet's home page: http://www.ricochet.com/

Yeah I thought Ricochet went out of business? That would explain why your frequency counter would not pick anything up, too (out of service). Around ASU West certainly seems like a prime spot for Ricochet to have set up, too.

??

3013. Increased security at airports?

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2002-05-11 03:59:18 UTC
From: jhguetherman
Topic: 3013 Message: 3013

I thought this was important enough to post. Has anyone noticed an increase in security around Sky Harbor or Tucson International? Was there any problem with scanners, et all, at the open house at Luke AFB? (I don't recall if DMAFB has had one yet this year.) Any train watchers on the list who have noticed increased security?

John H. Guetherman

Subject: Re: [FedCom] Re - Secret Law

Peter is correct BUT will this whole thing going to get out of hand again? Difficult to believe that FBI agents would visit people just for asking a simple question to avoid violating the law -- but just because an investigator talks to you doesn't mean you've violated any law!!!! Also even before 9/11 many airports had expanded their no parking/stopping areas on approaches to airports, public access roads close to taxiways, etc. Furthermore many 'sensitive' facilities always had a policy to respond to any vehicles stopped EVEN if on a public highway going right by that facility. Law Enforcement can ask

folks to move along in just about any circumstance anyways. Don't you think that the feds already have people assigned to look at all these scanner related hobby mail lists? On FEDCOM you don't even have to join the list in order to read and/or download the achieves. I would bet that the hobby publications such as "Monitioring Times", "Popular Communications", "Scanning USA", would be doing appropriate official press inquiries to alert hobbyists of such a law.

HOWEVER, apparently Hanscom AFB's open house/air show has restricted scanner operation for visitors to the show per their prerecorded show hotline at 781-377-5287 for details. Also the FAQ at the airshow website see htt://www.hanscomairshow2002.com appears to ban scanners, two way radio equipment, etc. BUT allows cellular/pcs phones.

FURTHERMORE, the U.S. Air Force has instituted a program called Called "Eagle Eyes," the program aims to prevent terrorism by encouraging and enabling Air Force members and citizens to report terrorist planning activities they observe. The program also features processes for rapid follow-up investigations and information sharing to other echelons of command and OTHER LAW ENFORCEMENT AGENCIES as appropriate. REPORTABLE activities include:

-- SURVEILLANCE. Someone recording or monitoring activities. This may include using cameras (either still or video), taking notes, drawing diagrams, annotating on maps, or using binoculars or other vision-enhancing devices. (BUT SCANNERS & RADIO COMMS ARE LEFT OUT??)
-- ELICITATION. People or organizations attempting to gain information about military operations, capabilities, or people. Elicitation attempts may be made by mail, fax, telephone, or in person.
-- TESTS OF SECURITY. Any attempts to measure reaction times to security breaches or to penetrate physical security barriers or procedures in order to assess strengths and weaknesses.
-- ACQUIRING SUPPLIES. Purchasing or stealing explosives, weapons, ammunition, etc. Also includes acquiring military uniforms, decals, flight manuals, passes or badges (or the equipment to manufacture such items) or any other controlled items.
-- SUSPICIOUS PERSONS OUT OF PLACE. These are people who don't seem to belong in the workplace, neighbourhood, business establishment, or anywhere else. This includes suspicious border crossings and stowaways aboard ship or people jumping ship in port.
-- DRY RUN: Putting people into position and moving them around according to their plan without actually committing the terrorist act. This is especially true when planning a kidnapping, but it can also pertain to bombings. An element of this activity could also include mapping out routes and determining the timing of traffic lights and flow.
-- DEPLOYING ASSETS: People and supplies getting into position to commit the act. This is a person's last chance to alert authorities before the terrorist act occurs.

So aero monitoring/photo hobbyists are probably going to be greatly affected by these new reporting guidelines that perhaps have also been instituted selected FAA civilian airports.

Regarding scanners at FAA major airports, etc. What isn't logically is that most radio signals travel off the airport site anyways. I'm 30+ miles away from the nearest major civilian passenger airport and even with a portable antenna on the scanner I can pickup the repeaters that carry airport administration, fire, and some of the security activity (one talk group is patched back into the old high band VHF system & may be used by some security personnel), the State PD troop assigned to security uses a digital trunking system.

Another aspect is that hobbyists generally are going to stick around an area for a fairly long period of time. Now they will become suspects when in fact a group of vehicles travelling quickly though the airport at various times could actually take pictures, record audio, & scoop frequencies relatively quickly. There's plenty of ways to do covert video surveillance from vehicles.

The potential terrorists we are dealing with have shown in the past that they have some very smart people who plan these attacks and part of the equation was the surperb "covert" surveillance.

I guess the aero related scanner hobbyists have become casualties to these well meaning programs. BUT frankly this could also apply to folks who like to watch trains, ships, and perhaps ANY non public related event as well. Furthermore, I would guess that even outdoor hobbyist/hikers that have knapsacks on their backs & are walking into the woods next to high voltage transmission lines could also be termed suspecious!!!

Perhaps more information will become available in the future. I highly doubt that any hobbyists wants to be a martyr to prove a point. If it IS THE LAW than that's the way it is!!!!

From the "About Us" webpage:

http://www.ricochet.com/about.html

"Ricochet Networks, Inc. is a wholly owned subsidiary of Aerie Networks, Inc., a privately held, broadband services company based in Denver, Colorado. In November 2001, the Company purchased the Ricochet® intellectual property and certain related assets from bankrupt Metricom. Metricom had invested over $1.3 billion to develop the Ricochet technology and deploy the network in 21 major U.S. cities and had acquired 51,000 subscribers prior to suspending its operations in August 2001."

So, the system was sold to Aerie Networks by Metricom. Also, the system uses a spread spectrum emmission, which is why a counter won't work on it. It's in the 900 MHz band, though. Of course, it's possible that the system was shut-down here in the Valley.

I think the ones you are looking at are for wireless internet called ricochet. They are small whitish boxes that have a black antennae pointing down. Im pretty sure that is what they are or were before the co went under. From what I heard they have been baught by some other co and will try to sell it again.

I'm a little slow on the uptake this morning, so bear with me...
I'm just wanting to know if anyone is monitering the Toadlena Fire up in Northern Az/Northwestern NM.... Here's the info I have been able to gather referencing this one:

http://www.cidi.org/wildfire/ixl9.html
NICC Incident Management Report 10-May-02
SOUTHWEST AREA LARGE FIRES:

TOADLENA 1, Bureau of Indian Affairs, Navajo Area Office. A Type 1 Incident Management Team (Humphrey) is assigned. This fire is three miles west of Toadlena, NM. Fire behavior was moderate with some flanking, backing and flare-ups. Significant progress was made in fireline construction and improvement. Two outbuildings were lost during the initial phases of the fire.

As well as:

http://www.fs.fed.us/r3/fire/
SIT300 (Resource Status)

VHF (Victor) FREQUENCIES
StateFrequencyStatusDateAssignedStateZoneUnitIncident Name
AZ 120.825 C 5/7 AZ FLZ NAO Toadlena 1 (rotorwing ??)
AZ 133.875 C 5/7 AZ FLZ NAO Toadlena 1 (fixedwing ??)

Can anyone verify the status of the 2 freqs, and possibly which aircraft are involved, and where they are coming from?! Any info would be appreciated!

73's Donnie

Somewhere in the "pucker brush" near
Libby Army Airfield
Ft Huachuca Az

3018. RE: [ArizonaScanner] Confirmation Please:

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2002-05-12 21:11:24 UTC
From: Dan Rollman
Topic: 3017 Message: 3018

The Region 3 website now shows the following:

The 766-acre, human-caused TOADLENA #1 is contained. TOADLENA #1 is 3 miles west of Toadlena, New Mexico, on the Navajo Nation. Road closures were lifted Thursday night. Larry Humphrey's Southwest Area Type I Incident Management Team turned management of the fire over to a Bureau of Indian Affairs Type III incident management team on Saturday. Resources assigned: 4 Type I crews, 6 Type II crews, 1 helicopter, 3 engines, 2 water tenders, 274 total personnel.

So it doesn't appear any tankers remain assigned. I don't know which ones they were, either. (Lots of help I am!!) If I remember correctly from the ScanColorado list, I think Larry Humphrey was on one of the urban interface fires outside Denver last week, so he must have reassigned to come down to Toadlena.

Dan

Thanks for trying Dan... I was just curious because the 3 tankers here at Ft Huachuca have been out for "joyrides" for the lats couple of days, but I dont know where they are off to... thought possibly they might be heading either there or the fire in New Mexico near Cloudcroft.

Donnie,

The current SIT300 report shows T-26 and T-131 assigned the Bouquet Fire
in California. I am in Tucson for Mother's Day, and I do remember one of
those tankers on Friday (the day the SIT300 says they were assigned) talking
on ForestNet collecting Victor frequency information for a fire in California.
That makes sense.

Dan

From: walter.howard@juno.com
Topic: 3015 Message: 3028

To Dan and all.

Notice that 155.865 is the INPUT to Capitol Police.

When the request fo coordination came around,I took a portable radio to the site and heard Capitol loud and clear.

DPS, acting for Capitol Police, protested the coordination based on my test.
APCO International, in their infinite widom, overruled the local coordinator, and
approved the frequency.

So, when I saw that the license had been issued, I got a little peeved. I am
pursuing this with the intent of killing it.

My point is, THANK YOU!!! for getting the license listing posted to the list.
It has given me a chance to keep an interfering signal off the air, instead
of having to run it down afterwards.

And if anyone passes through Yarnell, at the south end of "town" on the East
side of the highway, look for the cellular/microwave tower. That's the intended
site, and tell me how well you hear Capitol Police in the area.

3030. Tucson AZ Scanner Subgroup Get Together

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2002-05-14 04:05:13 UTC
From: Mark Pagel
Topic: 3030 Message: 3030

Dear Folks,

A reminder for those so inclined.
Our monthly Tucson AZ Scanner Subgroup Get Together will be on
Saturday, May 18th, 5PM, Coco's Restaurant, 2990 N. Campbell Ave. Tucson, AZ
(520) 795-7494.
Back Room.

This month's theme will be Mil Aero monitoring.

Sincerely,

Mark Pagel

Good Catch on that one Kelly, I heard the dispatcher (169.600)
speaking to someone referencing Gardner Canyon around 11 am this morning,
I'll bet there is a wee bit of smoke in Tucson from that one! We are some
what smoked out here in the Cochise county area as well, not from the
Gardner Fire, but from a fire burning somewhere around Douglas on the
other side of the border.
BTW... where did the 415.525 freq come from, is that a link freq
for the FIRE NET or what?!

From: Spaceflight Inc.
Topic: 3022 Message: 3032

Donnie,

169.60 and 415.525 are linked together. I think some crews only have UHF radios and they also use the 415 to link in the moble repeaters. As for the smoke from Dougles they where talking about it was just starting to cross over the border around 1300 today.

I wonder if Sky Harbor would be willing to do something like this, what with all the complaints from Tempe and Scottsdale. May also be of interest to the aviation buffs, even though it has a 10-minute delay for security reasons.

By the way, what frequency do the police and media helo's use when they need to transit over Sky Harbor northbound or southbound, or are otherwise near the airport?

John H. Guetherman

Subject: LA Time story on LAX Flight Tracking

Here is an interesting story in today's LA Times about a LAX web site for tracking flights in the LA area.
Clark

LOS ANGELES
Web Site Casts Ear on the Sky for Noisy Flights
Aviation: Residents near LAX can use the city-created system to identify offending planes right down to their tail numbers and altitude.

By JENNIFER OLDHAM, TIMES STAFF WRITER

Westchester resident Danny Schneider is used to a certain amount of airport noise interrupting the early morning quiet. But when he stepped outside to pick up his newspaper one day recently, a low-flying turboprop plane overhead seemed even closer, and louder, than normal.

So Schneider did just what city officials and federal regulators hoped he would do: He went inside and used his computer to find out exactly how low the plane was flying, its tail number and which airline was operating it.

If it had been an egregious violation, which Schneider did not consider it to be, he could have reported the offending flight. Schneider logged on to a new Web site--LAX Internet Flight Tracks--that was created by the city agency that operates Los Angeles International Airport so the 90,000 or so people living under the

flight path can better monitor aircraft noise.

Officials hope that residents will use the site to gather information about wayward flights and report it directly to the airlines or the Federal Aviation Administration, which determines flight paths into and out of LAX.

*

Web Site Averages 660 Visitors a Day

"If someone gets woken up at 3 a.m. because of an eastern departure, they can go online, click and see who it was, and call the airline and ask what they're doing," said Roger Johnson, deputy executive director of technology and environmental affairs for the city's airport agency. "We hope this will allow us to be responsive without being as labor intensive."

The airport's noise monitoring program lost employees and resources in the budget crunch after the Sept. 11 terrorist attacks, forcing officials to look for other ways to serve residents.

The flight tracking system--a year and $35,000 in the making--has logged about 660 users a day on average since it debuted this month.

It determines a plane's location by listening in on communications between an airplane's transponder--a device that sends a signal communicating unique information about the craft--and the FAA radar system at LAX.

Many airlines and airports already use this software to keep track of aircraft in the air and on the ground.

"This system allows a gate agent to tell people exactly when the aircraft will come in, when it will be able to leave, and if it has been delayed," said Ron Dunsky, director of marketing for Megadata Corp., the Greenwich, Conn., company that designed the Flight Tracks site for the city.

"The public doesn't have access to information at any other airports that people are going to get from LAX," Dunsky said.

Visitors to the site can view arriving and departing flights, shown in blue and green, respectively, and aircraft moving through the region, shown in black. All of it appears on a 10-minute delay for security reasons.

Planes are superimposed on a map of the Los Angeles area. Users can zoom in on neighborhoods, and view flight activity anywhere from six to 96 miles from the facility. Clicking on an airplane icon provides additional data including aircraft type, altitude and track identification number.

To get more information about a flight, surfers can wait an hour and use the site's replay function, which provides the airline, the tail number, the airport where the flight originated and its destination. The replay feature archives data for three months.

The system has several quirks, including the propensity for an icon to temporarily disappear from the screen when a flight passes directly over the radar antenna on the airport's western edge, causing the device to lose the transponder signal.

The site works best with a high-speed Internet connection and an updated browser. It's slow to load on dial-up Internet connections.

Members of the LAX Community Noise Roundtable, a year-old organization composed of representatives from 17 communities and agencies such as the FAA, said the site gives residents the ability to assess for themselves whether an aircraft has strayed from its flight path.

"A big 747-400 went right over the homes of people in Playa del Rey, and we were able to look up and find out who the offending aircraft was," said Westchester's Schneider, also a member of the Noise Roundtable.

"And then we could ask why did that plane do a go-around of their homes at 1,900 feet?" (A go-around is when an aircraft aborts a landing and flies back around the airport to approach the runway again.)

The ability to provide an airline and flight number when reporting problems has saved residents and airport officials time and headaches, Schneider said.

He added that in the past when residents called the airport about a flight, officials often were unable to find it on their manifest.

*

Bay Area Uses Similar System

San Francisco aviation officials say a similar flight tracking system has allowed them to better communicate with communities about noise issues around San Francisco International Airport and San Jose and Oakland airports.

The year-old Bay Area site-- live.airportnetwork.com/sfo/ --is similar to the LAX site. It provides residents with the altitude and air speed for arriving and departing aircraft, but doesn't give the airline or tail number.

Residents can call the airport for this information, said Ron Wilson, a San Francisco airport spokesman, adding that the site averages about 300 hits a day. It doesn't have a replay feature.

"It has debunked the myth that the plane is really 500 feet over someone's house," Wilson said. "It makes it easier for us to live with each other."

They talk directly to the tower. I believe the frequency is 118.7 and 120.9.
All of the helicopter operators in this area are signers on the "sharp delta" agreement, which allow them to certain routes. They don□t have to deal with anyone other than the tower. No approach or anything like that.
This would include News, Medical, police and many other helos in the area.

I wonder if Sky Harbor would be willing to do something like this, what with all the complaints from Tempe and Scottsdale. May also be of interest to the aviation buffs, even though it has a 10-minute delay for security reasons.

By the way, what frequency do the police and media helo's use when they need to transit over Sky Harbor northbound or southbound, or are otherwise near the airport?

Subject: LA Time story on LAX Flight Tracking

Here is an interesting story in today's LA Times about a LAX web site for tracking flights in the LA area.
Clark

LOS ANGELES
Web Site Casts Ear on the Sky for Noisy Flights
Aviation: Residents near LAX can use the city-created system to identify offending planes right down to their tail numbers and altitude.

By JENNIFER OLDHAM, TIMES STAFF WRITER

Westchester resident Danny Schneider is used to a certain amount of airport noise interrupting the early morning quiet. But when he stepped outside to pick up his newspaper one day recently, a low- flying turboprop plane overhead seemed even closer, and louder, than normal.

So Schneider did just what city officials and federal regulators hoped he would do: He went inside and used his computer to find out exactly how low the plane was flying, its tail number and which airline was operating it.

If it had been an egregious violation, which Schneider did not consider it to be, he could have reported the offending flight. Schneider logged on to a new Web site--LAX Internet Flight Tracks-- that was created by the city agency that operates Los Angeles International Airport so the 90,000 or so people living under the flight path can better monitor aircraft noise.

Officials hope that residents will use the site to gather information about wayward flights and report it directly to the airlines or the Federal Aviation Administration, which determines flight paths into and out of LAX.

*

Web Site Averages 660 Visitors a Day

"If someone gets woken up at 3 a.m. because of an eastern departure, they can go online, click and see who it was, and call the airline and ask what they're doing," said Roger Johnson, deputy executive director of technology and environmental affairs for the city's airport agency. "We hope this will allow us to be responsive without being as labor intensive."

The airport's noise monitoring program lost employees and resources in the budget crunch after the Sept. 11 terrorist attacks, forcing officials to look for other ways to serve residents.

The flight tracking system--a year and $35,000 in the making--has logged about 660 users a day on average since it debuted this month.

It determines a plane's location by listening in on communications between an airplane's transponder--a device that sends a signal communicating unique information about the craft--and the FAA radar system at LAX.

Many airlines and airports already use this software to keep track of aircraft in the air and on the ground.

"This system allows a gate agent to tell people exactly when the aircraft will come in, when it will be able to leave, and if it has been delayed," said Ron Dunsky, director of marketing for Megadata Corp., the Greenwich, Conn., company that designed the Flight Tracks site for the city.

"The public doesn't have access to information at any other airports that people are going to get from LAX," Dunsky said.

Visitors to the site can view arriving and departing flights, shown in blue and green, respectively, and aircraft moving through the region, shown in black. All of it appears on a 10-minute delay for security reasons.

Planes are superimposed on a map of the Los Angeles area. Users can zoom in on neighborhoods, and view flight activity anywhere from six to 96 miles from the facility. Clicking on an airplane icon provides additional data including aircraft type, altitude and track identification number.

To get more information about a flight, surfers can wait an hour and use the site's replay function, which provides the airline, the tail number, the airport where the flight originated and its destination. The replay feature archives data for three months.

The system has several quirks, including the propensity for an icon to temporarily disappear from the screen when a flight passes directly over the radar antenna on the airport's western edge, causing the device to lose the transponder signal.

The site works best with a high-speed Internet connection and an updated browser. It's slow to load on dial-up Internet connections.

Members of the LAX Community Noise Roundtable, a year-old organization composed of representatives from 17 communities and agencies such as the FAA, said the site gives residents the ability to assess for themselves whether an aircraft has strayed from its flight path.

"A big 747-400 went right over the homes of people in Playa del Rey, and we were able to look up and find out who the offending aircraft was," said Westchester's Schneider, also a member of the Noise Roundtable.

"And then we could ask why did that plane do a go-around of their homes at 1,900 feet?" (A go-around is when an aircraft aborts a landing and flies back around the airport to approach the runway again.)

The ability to provide an airline and flight number when reporting problems has saved residents and airport officials time and headaches, Schneider said.

He added that in the past when residents called the airport about a flight, officials often were unable to find it on their manifest.

*

Bay Area Uses Similar System

San Francisco aviation officials say a similar flight tracking system has allowed them to better communicate with communities about noise issues around San Francisco International Airport and San Jose and Oakland airports.

The year-old Bay Area site-- live.airportnetwork.com/sfo/ --is similar to the LAX site. It provides residents with the altitude and air speed for arriving and departing aircraft, but doesn't give the airline or tail number.

Don,

Not able to hear anything from the Valley. It's in Coconino NF, not Tonto. Along Hwy87 a few miles up from Strawberry. Highway remains closed as best I know. I guess we'll find out in the AM if a Type I (Jim Batemans team is on until midnight, then Larry Humphrey's team is up for 2 weeks) or Type II incident management team was assigned to it. Check the Morning Report and SIT300 report on the Forest Service Region 3 webpage http://www.fs.fed.us/r3/fire/ in the morning for more info.

Frequencies would be Coconino NF Freqs listed on Page 39 of SWFD (www.scannerstuff.com) and the NIFC Frequencies listed on Page 41.

In the City of Peoria, they became the property of the city when the company filed for bankruptcy. Peoria has been looking to maybe use them to read water meters. I think there about 150 in Peoria. APS has demanded they be disconnected from the street lights. Peoria has hired someone to go around and disconnect the units.

Morning group... Lately, my scanning interests have leaned toward listening to the Forest, the State Land, BLM ect ect type fire related freqs... after all, it seems to be quite the fire season already!!
Anyway, naturally one of the freqs I am monitoring is the State Fire Mutual Aid freq 154.280... As most folks know, this is a "statewide use", simplex freq, that is monitored via remote base stations on various mountain tops throughout the state, by State Land folks in Tucson and Phx (maybe else where as well). This freq can be very active when there is a State Land fire, as well as other types of wildland fires involving multiple agencies....
Anyway... heres my question, has anyone else noticed that approx. every 15-30 min (I really haven't timed it as of yet) there appears to be a solid, dead carrier, for about 4-6 seconds? Which coincidentally, is about the length of time needed for a CW ID, but alas there is no CW ID to be heard!
I have noticed this phenomenon going on now for several months... anyone have any clues as to what's happening???

3051. DISCONE ANTENNA GAIN??

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2002-05-18 21:49:12 UTC
From: k1fhz
Topic: 3051 Message: 3051

The subject of Discone antennas has come up in this group on many occasions. I tripped across a military spec. UHF Discone Antenna while on a search today. The web site is listed below, only a single page. You will note the GAIN from 225 MHz through 400 MHz is spec'ed at -.3 dbd!!! That's MINUS .3 dbd, less than unity gain!

I have frequently mentioned this fact when folks are talking about the wonders of their Radio Shack or other brand of discone antenna. The Discone antenna IS NOT the cure all antenna for all men?!!

It has its place as a wide band antenna, perhaps the RS spec. from 25 to 1300 MHz is quite a stretch, but it will NOT provide you with a gain antenna which so many of us require as we move up in frequency into the UHF and SUHF frequency range!

If you are not receiving well at 800 to 950 MHz try adding a 6 to 9 dbd gain antenna to your scanner and sit back and listen to what perhaps you never knew was there before!

So the next time someone tells you just how wonderful their Discone Antenna is performing please ask them the following question. Just what are you comparing your Discone to??? So often the answer will be Well it's the only antenna I've ever used?!!! Or, it works much better than that little whip on top of the radio!

Again this information is just for reference. A discone antenna has wide band width but little and most always less than zero db of gain. It will work well for aircraft because with 30,000 feet of elevation even a 10 or 20 watt aircraft transmitter pounds out a good solid signal!

As for its use for everyday local Police, Fire, Emergency and other radio services it leaves a great deal to be desired. If a discone is all you have it may well be time to try something new with positive numbers in the gain column!

Please check out this URL: (There's a drawing and dimensions and spec's!) <http://www.rami.com/197lg.gif>

Thanks for reading,
August

I believe Donnie, Somewhere in the "pucker brush", asked the question about the 4 to 6 seconds of dead air carrier only on this frequency and as I have thought about it it would seem to often to be an ID'er. I would think Howard would be our man to answer the question. I do know when I was a Comm Chief in CA a number of years ago we took the CW ID'er off the DA's channel because it bothered him and went to AM ID'ing the repeater! You are allowed to ID by voice (Live or recorded), CW (what most all do) or using a common data stream. You can modulate the FM carrier as most do or you can AM modulate the FM carrier I believe we used about 30% AM on the carrier and tone modulated that sub carrier. With a good FM receiver you will never be aware of it except in a fringe area. I do not believe anyone in AZ is doing this however again a good question for Howard.

It could also be a defective ID unit that is keying up but not modulating the carrier. It may also be a data burst and you are just not hearing the data like to new digital systems going in all over. The State of NV is installing a VHF digital Trunking system and all you hear is a hiss with the exception of an occasional burst of what sounds like 4 phase pager encoding then more hiss!

That's all my guesses for the week.

3057. The ICP Get Together for May.

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2002-05-21 01:40:23 UTC
From: Roy Schahrer
Topic: 3057 Message: 3057

Due to the Memorial Day Weekend the normal May ICP Get Together is being pushed back a week to Sat June 1st.

This meeting is going to be at the Fudruckers at A51 & Highland and everyone is welcome. We have no set topic and spend a few hours just chatting about scanners and the interesting things we have heard. The event is held by the Dispatchers and Members of Incident Command Page (www.incidentcommandpage.com) but any scanner listener is always welcome to come on down and meet the group.

3059. maricopa co numbering(re-hashed)

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2002-05-21 15:08:36 UTC
From: famwiley@aol.com
Topic: 3059 Message: 3059

Maricopa County
Regional
Numbering System
001-099—Phoenix
100-109—Sun City West
110-119—Laveen
120-129—El Mirage
130-139—Sun City
140-149—Daisy Mountain
150-159—Glendale
160-169—Tolleson
170-179—Avondale
180-189—Goodyear
190-199—Peoria
200-229—Mesa
230-239—Sun Lakes
240-249—Guadalupe
250-259—Gilbert
260-269—Apache Junction
270-279—Tempe
280-289– Chandler
290-299—Salt River
300-309—Surprise
310-319—Town of Buckeye
320-329—Buckeye Valley
330-339—Black Canyon City
340-349—Tonopah
350-359– Palo Verde Nuclear
360-369—Salome?
370-379—Harquahala
380-389—Gila Bend
390-400—Unknown
400-409—Fort McDowell
420-439—Gila River
700-799—Phoenix Adaptive
800-899—Rural/Metro
2200-2229—Mesa Adaptive
2282—Chandler Adaptive

I gleaned this from the Phoenix fire dispatch news letter.
Has anyone heard rumblings about county wide re-numbering? going to 4 digit ?

Kevin

From: Michael Todd
Topic: 3059 Message: 3060

When the county wide numbering system first began, there was strong talk about making them 4 digits. Many complained saying that it was "too hard" to say 4 digits everytime you had to ID yourself on the radio. Thus, from my understanding, they decided on three digits. I have heard from many that they want to go 4 digits, which could eventually lead to a "statewide numbering system". The "statewide" talk has increased Sept 11 where everyone realized that public safety units could be doing a lot more moving to help out in other parts of the state.

Hello,

A few weeks ago I heard the same thing. The infrastructure is being put into place at the end of this month to the beginning of June. The process should take a few months to complete. Glendale PD will be analog for a while after the transition is compete onto the new upgraded system. Glendale is keeping its current radios which are analog only and buy digital radios later on. It has to be part of budgeting. No worries on not hearing them before the Digital scanner some out.

From what I heard the main site will be Shaw Butte with a simulcast site at Glendale Airport.

I hope you are right Joe. Any information I have is
from what our dispatcher has passed on. She said our
department can expect the 'new digital radios' sometime in
December. I'll pass on anything else I hear.

Am wondering if the system is going to be
'APCO 25' type?

Dave

Hi Tim,

Thanks for the kind words! We may do a CD (.pdf) version of the new 7th edition Arizona book, but it will likely not be until late this year for two reasons: The piracy issues (much easier to copy the CD than the actual book), and the fact that I'd like to get new editions of other regions (including a new Oregon/Washington book, as well as new coverage of ATLANTA) on the same CD. The CD will likely also include the 6th edition 5-state book (as was on the previous CD) so that some coverage is included for Las Vegas and Salt Lake City (areas which we have no plans for a new edition for). Essentially, then, it will be more like a compilation CD of the Scannerstuff Library.

I've been watching the area behind the Catalina Mountains billow smoke since last night. Today awoke to a huge thick smoke travelling between the Catalina and Rincon Mountains over Tucson and out to the west.

The following freqs are active today with the Bullock Fire

118.95 - Used by Fixed-wings for side local coordination since no helo's in the area.

122.225 - Fixed Wing A-2-A

123.075 - Fixed Wing

163.325 - Identified as new A-2-G freq. "Lead" aircraft have made contact with Prescott, Division Ops, Divisions "A" and "B", Chief Mountain, Mormon Lake, and Flagstaff. Talk of resupply for these guys and of course drops on the fire.

168.15 - Helo movement to fire

169.60 -

411.525 -

415.525 -

Also, the following URL shows a satellite map of the state of AZ and the three active fires for today, it looks like it is updated everyday. This is a good one to bookmark. http://www.fs.fed.us/r3/fire/

Found this on the SW Area Wildfire Site. It is this mornings situation report for the Bullock fire and details the different types of aircraft and ground vehicles/personnel in use there:

"Bullock (Coronado NF) 1,500 acres. Cause under investigation, started 5/21. Zero percent contained, no estimate of containment. The fire is located 15 miles northeast of Tucson, AZ burning in grasslands, oak woodland, and chaparral. Due to the fires' inaccessible location and the high winds yesterday, the fire spread rapidly to 1,500 acres throughout the day. Air resources were unable to drop retardant through most of the day due to the winds. Actions for today include establishing a solid anchor point and flanking the fire with retardant. The fire is currently spreading uphill to the north and west. Resources: The Southeast/White Mountain Zone Type 2 Team (Kvale) will take over management of the fire this morning at 0600, 3 Type 1 crews, 2 Type 2 crews, 3 helicopters, and 2 engines. Total 126 personnel."

Air Attack on 122.225 is coordinating the effort between ground and tankers on this frequency. Air Attack just advised that he would hold up the helo to let Tanker-131 (C-130) conduct a run to drop supplies. Unfortunately, I haven't heard any helo activity. Anyone have a freq for the helo comms? I still have 118.95 plugged in and there is no activity at this time.

Also, 163.325, in addition to the contact reported earlier, Air Attack contacted Sacramento, Divisions "C" and "D". He also advised that he is talking to Prescott on the "Prescott-3 freq?". Any ideas?

168.15 Helicopter-318 with 4 souls on board given permission to go to Forest-Net vs Fire Net.

168.15/169.60/411.525/415.525 are more admin type comms.

Thanks,
John

Tim,
I live on the east side of Pinetop about 19 air miles
from the base of Sunrise Park Ski Area. My home is at
7300 feet plus add another 45 feet for antennas.
I use a Icom PCR 1000 and a Pro 2006 for VHF and UHF.
Antennas are 2 Diamond D-130J discones. With the
elevation I have nice coverage for this part of the
state. By the way the Sunrise Fire is fully contained
but we our hoping to get through this weekend without
the smell of smoke. Wish us luck...

John,

What was 1,500 acres last night became 6,819 acres early this morning, and significantly larger now (10:45 AM). Hand crews are now reporting the fire is "pushing" the retardent lines, and Air Attack is being forced to lay additional retardant drops over pre-existing lines. Same crews are making multiple different requests, leading to the need to set priorities and let some needs slide for the time being. The resources comitted as of early this AM are reflected in the rundown below (from the Region 3 Fire Intelligence page). But combining what Region 3 page shows for resources, along with what I'm hearing on the radio (presumably assigned this AM after the morning report was done)... I show...

Lead-49, Lead-33, Helicopters 747, 212, 745, 315, 205, 320, 189, 194. Tankers 21, 23, 25, 65, 119, 131. Those who know wildland fire very well know that that is a massive resource response for what seems to still be a Type II incident. Van Bateman's Type I team is assigned the Borrego fire in New Mexico, but it wouldn't surprise me one bit to hear Larry Humphrey's Type I incident management team be assigned the Bullock fire this afternoon if it keeps up like it is. So much for their week off!

By the way, Coronado Dispatch assigned a helicopter a victor frequency of 119.475, but I didn't catch what it was for, so add that to the list of possibilities.

Dan

Bullock (Coronado NF) 6,819 acres. Cause under investigation, started 5/21. 25 percent contained, no estimate of containment. The fire is located 15 miles northeast of Tucson, AZ burning in grasslands, oak woodland, chaparral, and ponderosa Pine stringers. Drought conditions and upslope winds resulted in extreme behavior and high rates of spread yesterday. The fire continues uphill to the northwest toward timber stands and potentially poses a serious threat to residential and high value recreation use structures. Most activity during yesterdays operational period consisted of crew helicopter shuttle, flanking the fire with direct attack, line burnout, holding, and air attack. Over 700 structures potentially threatened, including Summerhaven, scattered rural communities, 2 major electronic sites, and a ski area. No structures have burned. Mount Lemmon access road has been closed and the Sheriff's Office has initiated pre-notification of contingency evacuation procedures. No evacuation order has been issued. Resources: The Southeast/White Mountain Zone Type 2 Team (Kvale) is managing the incident. 13 Type 1 crews, 1 Type 2 crews, 3 helicopters, 1 engine, and 3 water tenders are assigned. Total 410 personnel.

Hello all

I am working on a live scannering audio feed. If you want give this a try.
http://68.63.180.114:8080 It will be up and down from time to time as I work on it.

Kelly

Ok found the prob. You need to enter the url http://68.63.180.114:8080 into windows media player under Files > Open URL. I will make a web page in the next few days so that will not need to happen.

No, the state doesn't do anything fancy. Just a morse ID by audio tones.
All our public safety ID's are set for 30 minutes IF there's been
transmitter activity.

As to the data, it's possible, but not likely on a mutual aid channel.

Any more reports are welcomed. On ANY state or public safety channels.

Would Donnie give me a better idea of his monitoring point?

Private e-mail would probably be better. I promise not to use any reports
for anything other than interference tracking.

Donnie :)

I heard on 118.95, being used by the Fixed-Wings, that they'll be going back to Ft Huachuca, since they have the necessary fuel. The choice was 50 miles to FT Huachuca or Silver City (NM) at over 120 plus miles away. So you'll probably still see some of these guys down there.

The smoke is billowing as strong as yesterday. 135.95 appears to be the Helicopter frequency. Air Attack with Helicopters 745 and 747. Just started listening, so don't know if anyone else is on it. Thanks for the tip on this one.

On the way home today also heard on 118.95 a reference to Division "E".

I've got 2.5 hours of recording to listen to for today. I only had the air freqs up, so it sounds like they were busy :)

John

John and others listening in.... just as a side note I noticed that you posted references to "Div A, B, C, & D"... this is from the "Merrit" fire, 4-20-02 here in the Huachuca's, and it may be of some use to you'all:

168.050 Tac "Div. A"
168.200 Tac "Div. B"
168.600 Tac "Div. C"
168.075 Command
166.625 Air-Ground
168.625 Air Guard

Also, this is copy'd from the SIT 300 page of the SW Fed Fire pages:

AZ 118.950 5/21 SEZ CNF Bullock
AZ 135.950 5/21 SEZ CNF Bullock
AZ 122.225 5/21 SEZ CNF Bullock

Good luck...

73's Donnie

Dan :)

Thanks for the new freq. I've plugged it in, but it sounds like the helo's are on 135.95.

I haven't listened to all of my recordings yet, so it will take a moment to figure our all of the participants, although I have certainly heard some of the aircraft and leads that you've mentioned.

Judging from the size of the smoke, it does not look like they've got a handle on it yet.

John,

What was 1,500 acres last night became 6,819 acres early this morning, and significantly larger now (10:45 AM). Hand crews are now reporting the fire is "pushing" the retardent lines, and Air Attack is being forced to lay additional retardant drops over pre-existing lines. Same crews are making multiple different requests, leading to the need to set priorities and let some needs slide for the time being. The resources comitted as of early this AM are reflected in the rundown below (from the Region 3 Fire Intelligence
page). But combining what Region 3 page shows for resources, along with what I'm hearing on the radio (presumably assigned this AM after the morning report was done)... I show...

Lead-49, Lead-33, Helicopters 747, 212, 745, 315, 205, 320, 189, 194. Tankers
21, 23, 25, 65, 119, 131. Those who know wildland fire very well know that that is a massive resource response for what seems to still be a Type II incident. Van Bateman's Type I team is assigned the Borrego fire in New Mexico, but it wouldn't surprise me one bit to hear Larry Humphrey's Type I incident management team be assigned the Bullock fire this afternoon if it keeps up like it is. So much for their week off!

By the way, Coronado Dispatch assigned a helicopter a victor frequency of 119.475, but I didn't catch what it was for, so add that to the list of possibilities.

Dan

3081. Bullock Fire - Update 23 May

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2002-05-24 00:52:02 UTC
From: FLANO
Topic: 3068 Message: 3081

For those interested here is an update:

118.95 - Fixed Wing Air-to-Air (Heavy Comms)
122.225 - Fixed Wing Air-to-Air (Used on 22 May, not heard on 23 May)
122.85 - Poss related
123.975 - Unk Comms - Possibly Helo Base
135.95 - Helo Air-to-Air (Light Comms)
163.325 - Air Attack Air-to-Ground (Medium to Heavy Comms)
169.60 - Dispatch freq for acft to fire; CNF admin comms

Dispatch advised that 2 more out of Colorado, Wichita, and another location are on the way this evening.

Air Attack is advising the Divisions that it will be tough to get the air-tankers in there due to the wind.

19:00 will be the end time for all of the air-tankers per Air Attack.

I just finished reviewing my recordings from 22 May recordings from late afternoon:

Aircraft:
Lead-33
Lead-49
700SR
Helicopter-205BD
Helicopter-320 (Hot Chow for Ground Crews)
Heli-Tanker-747
Tanker-21
Tanker-23
Tanker-26
Tanker-131

Ground Units:
Prescott "Hot Shots"
Sacramento (20 personnel)
Mormon Lake
Chief Mountain
Divisions A,B,C,D, Operations

3084. Bullock Fire - 23 May Recap

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2002-05-24 05:25:29 UTC
From: FLANO
Topic: 3068 Message: 3084

23 May Recap:
Air Attack Operations began 07:00 and ended at 18:45.
5 Tankers out of Ft Huachuca in the morning.
1 Tanker out of Silver City.
Gaining 2 tankers today, but losing 2 tomorrow, 24 May

Air Units: - Base/Comments:
Lead-33 - Tucson Intl Airport
Lead-49 -
Tanker-21 - Libby AAF
Tanker-23 - Libby AAF
Tanker-25 - Out of Silver City, recovered at Libby AAF
Tanker-65 -
Tanker-123 - Springerville to Winslow, will participate on the 24th
Tanker-131 - Tucson Intl Airport
Tanker-161 - Out of Winslow, recovered at Libby AAF
Heli-Tanker-745 - Tucson Intl Airport
Heli-Tanker-747 -
(Helo)-109 -
(Helo)-12D -
Helo-205BD - Bucket
Helo-212 - Shuttling people/equipment, Bucket
Helo-319 - Running Groceries, the "Llama"
Helo-320 - Running Recon
700SR - "Air Attack"

Ground Units:
Divisions A,B,C,D,E,Operations
Prescott "Hot Shots"
Sacramento "Hot Shots"
Northwest Fire
Flagstaff - Air Operations
Mormon Lake

Frequencies:
118.95 - Good for following fire-fighting activities
119.475 - Alternate Fixed Wing Frequency per Air Attack changeover
122.225 - Start of todays Fixed Wing Air-to-Air but changed to 118.95,
primary freq but lots of interference
123.975 - Helo Base
135.95 - Helicopter Air-to-Air
168.15 - Fire Net
169.60 - Forest Net, Dispatch, Good for following inbound/outbound air
support

Other Nets mentioned - Command and Tactical

For 24 May:

3 Air-Tankers and 1 Heavy Heli-Tanker are sked at 07:00. All remaining aircraft will begin at 09:00.

From: Don Armstrong
Topic: 3085 Message: 3085

Looks like the prediction is going to come true (see below)! I
was in Nogales all day yesterday, so I missed almost all of the action at
Libby :(~ I hope things get squared away soon... I have a job to do up
on Mt Lemon next week!

73's Donnie

Somewhere in the "pucker brush" near
Libby Army Airfield
Ft Huachuca Az

****
INCIDENT MANAGEMENT SITUATION REPORT
FRIDAY, MAY 24, 2002 - 0530 MDT
NATIONAL PREPAREDNESS LEVEL 2

CURRENT SITUATION:

Initial attack activity was light across the nation. Eight new large
fires
were reported, four in Alaska, and one each in the Southern California,
Eastern, Southern and Northern Rockies Areas. Five large fires were
contained, two in the Southwest Area and one each in the Eastern,
Southern
and Northern Rockies Areas. Very high to extreme fire indices were
reported in Arizona, Colorado, Kansas, Minnesota, Nevada, New Mexico,
Oklahoma, Texas, Utah and Wisconsin.

SOUTHWEST AREA LARGE FIRES:

BULLOCK, Coronado National Forest. A transfer of command from Kvale's
Type
2 Incident Management Team to Humphrey's Type 1 Incident Management Team
will occur at 1800 MST today. This fire is burning 15 miles northeast of
Tucson, AZ in grass, oak woodland and chaparral. Drought conditions and
upslope winds resulted in extreme fire behavior with rapid rates of
spread. Crews are flanking with direct attack handline and burn out
operations as the fire continues to burn northwest. Seven hundred fifteen
structures are threatened, including a ski recreation area. The Pima
County Sheriff's Office has completed a pre-notification of contingency
evacuation orders. The Catalina Highway is closed.

BORREGO, Santa Fe National Forest. A Type 1 Incident Management Team
(Bateman) is assigned. The fire is burning in pinyon and ponderosa pine
two miles southeast of Cordova, NM. Crowning, running and spotting up to
a
mile and a quarter ahead of the front were observed. Strong winds, dry

fuels and rugged terrain are hampering containment efforts. The town of Truchas has been evacuated and Cordova has been advised of a potential evacuation. An evacuation center has been opened at Chimayo Elementary School. Fourteen hundred thirty structures are threatened.

LEFT FORK, New Mexico State Forestry Office, Cimmaron District. This fire,
burning in mixed conifer forest, is 32 miles west of Raton, NM. Drought conditions, high winds, low relative humidity, and low fuel moisture are hampering containment efforts. Dozers are building and improving firelines.

INCIDENT |ST|UNIT| SIZE | % | EST |TOTAL|CRW|ENG|HELI|STRC|$$$

3086. Bullock and Copper Fires

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2002-05-24 23:40:17 UTC
From: FLANO
Topic: 3086 Message: 3086

Well, went out at lunch with the portable, the Bullock Fire seemed to be quieting down. They advised that they didn't need the tankers to be stacked, at least during the lunch hour :)

One additional Heavy Heli-Tanker enrte from California was due to arrive at 12:30pm.

New Frequency - 168.25 - Sounds like the ground comms between fire fighters with some acft chatter (Helicopter-745) - coordination of lines and drops.

Players:
Lead-33
Lead-49
700SR
Helicopter-12D
Helicopter-212SJ
310
Helicopter-320
(Helo)-336
Heli-Tanker-745
Heli-Tanker-747
Tanker-21
Tanker-23
Tanker-25
Tanker-26
Tanker-60 - ETA to Fort Huachuca at 17:30
Tanker-65
Tanker-123
Tanker-131

Copper Fire - Location Unknown. Asking permission for a helo to dip once at the Lone Mountain Ranch via the Sierra Vista District Office. Not listed yet on the fire map.

168.15 - Copper IC coodination with Dispatch
169.60 - Dispatch with Red Mountain and Copper IC about Tanker-497
135.975 - Copper Air Attack

Players:
Tanker-497 - Holding at Libby AAF
Engine-94

John

From: FLANO
Topic: 3086 Message: 3089

Well, let's further refine the freq (166.6125 - thanks Jim) as a Command Net associated with the Bullock Fire. Command-6 was in comms with several different entities.

Also, head on the 23rd and 24th, Aircraft 107Z fly over the Bullock Fire after the tankers and heli left. Last night, he flew over the fire, advising he was finished, and then flew on to the Borrego Fire in New Mexico. He advised that he'll be back here tonight. Heard on the Forest Net, believe it was the pilots voice, advising that them where they could find the imagery that he left behind.

It's 08:20, Air Attack is up now, over Bigelow area, with quite a bit of fire activity.

169.60 - Air Attack with Dispatch
163.325 - Air Attack advised Helo Base "Full Day of Acty", not too much Air Tanker activity early on. Using Type 1's to get to work on the Heli-spots first.
135.95 - Air Attack with Helo Base

Below is this morning's (25 May) situation report:

Bullock (Coronado NF) 10,000+ acres. Human caused, started 5/21. 40 percent contained, no estimate of containment. The fire is located 15 miles northeast of Tucson, AZ burning in grasslands, oak woodland, chaparral, ponderosa Pine, and mixed conifer. Extremely steep slopes, rocky cliffs, lack of road access, and very dry and light flashy fuels hampering control efforts. Drought conditions and upslope winds continue to result in active fire behavior and spread. The fire continues uphill to the northwest reaching transitional timber stands and potentially poses a serious threat to residential and high value recreation use structures, and threatened and endangered species sensitive wildlife habitat. Most activity during yesterdays operational period consisted of crew helicopter shuttle, flanking the fire with direct attack, line burnout, holding, and air attack. Over 700 structures continue to be threatened, including Summerhaven, scattered rural communities, 2 major electronic sites, and a ski area. No structures have burned. Mount Lemmon access road has been closed and the Sheriff's Office has completed pre-notification of contingency evacuation procedures. No evacuation order has been issued. Public meetings being conducted. Plans today include continuing efforts to flank and hold, with extended attack of fire head with primary air resources. Projected spread of fire will occur in a west and north direction. Resources: A SWA Type 1 Team (Humphrey) is managing the incident. 16 Type 1 crews, 6 Type 2 crews, 7 helicopters, 15 engines, 1 dozer, 3 water tenders, 8 air tankers are assigned. Total 761 personnel.

The helicopters are double-crewed so they can "fly to their heart's content."

Division "D" has 90 people.

Pima Co Sherrif will be running a probably situation room at the office on Tanque Verde. They will be keeping times.

Weather report from CNF, dry with possible dry thunderstorms in the mountains. Just what these guys don't need.

Freqs:
118.95 - Tanker Air-to-Air
135.95 - Helo Air-to-Air
163.325 - Air to Ground
166.725 - Operations
166.6125 - Command-4
168.70 - Air Attack called Command once

Players:
700SR - "Air Attack" for the morning
67T - Current "Air Attack"
Lead-33
Lead-49
Helicopter-192CH - from Tucson Intl Aprt with Dip....
Helicopter-319 - "Llama"
Helicopter-320 - Medevac for a Fire Fighter
Helicopter-336
Tanker-119 - broke at Libby AAF, probably saw him fly over my house enrte to his homebase at Ryan
Flagstaff Hot Shots
Mount Taylor
Blue Ridge

I'm taking pictures of the smoke from the southside of the mountains. I'll try to load them up in the files temporarily this evening, for those interested. The smoke from the scene is huge.

John
SE of Tucson

p.s. Russ, thanks for the additional frequencies.

3096. Libby Tankers

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2002-05-25 20:21:48 UTC
From: Don Armstrong
Topic: 3096 Message: 3096

I have been noticing a fair amount of air-air chit chat from the tankers (?) on 122.750. This was a freq used in the Merrit Fire (back side of the Huachuca's) as the Fixed Wing A-A. I noticed the traffic on it around 0800 this morning, and although there is noone ID'ing, the voices sound the same as the tanker pilots I'm hearing. The traffic seems to be incoming as well as outgoing.
I am also hearing comms on 163.325 (air attack calling div zulu), so this must be an A-G freq.

Hey Donnie,

You got 163.325 on the nose. It has been id'ed as the Air-to-Ground freq.

I'm hearing some commes on 123.975 too, so you might want to punch it up too.

Also, new Division - "X" - 64 personnel. He attempted to call "Golden Eagle".

I am hearing sparse comms on 146.52 and 145.39 per Russ, but nothing really intelligible from my location:<

Date: 2002-05-25 21:49:32 UTC
From: FLANO
Topic: 3086 Message: 3098

Bad news for the tankers. They are grounded for now due to the winds. The helicopters continue to work the fire.

Additional Divisions noted "H" and "M".

Channels 9 and 10 (not further identified) are down since the repeater was burned.

I loaded a picture of four shots of the billowing smoke over the fire from my house. It can be found in the photo section.

166.725 - Ground Chatter
168.25 - HeliTanker-745 with ground units and Air Attack
168.70 - Air Attack Command freq

I decided to look up some of the aircraft registrations to see what type are up there:

N192CH is a 1967 Kawasakivertol model KV107-11 turboshaft helicopter. Air Attack is referring to him as the "vertol" and he is operating from TIA.

N700SR is a 1974 AERO COMMANDER model 690A turboprop plane. He is one of the "Air Attack" aircraft.

N107Z is a 1985 Beech model 200C turboprop plane owned by the Dept of Agriculture. He performed the imagery passes over the Bullock Fire.

N212SJ is a 1973 Bell model 212 turboshaft helicopter.

N205BD is a 1971 Bell model 205A-1 turboshaft helicopter.

Topic: 3086 Message: 3103

Ok, figured out 411.475mhz - It is the National Freq for Flight Following of Aircraft.

Additional play of 5LT, possibly 355LT at Bullock Fire

They were able to get 6 tankers off for one round of drops before the end of daylight. All returned to Libby AAF.

One of the tankers apparently doused a helicopter, oops....

That's all for today....

3104. Mt. Lemmon EVACUATION!

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2002-05-26 03:09:59 UTC
From: Spaceflight Inc.
Topic: 3104 Message: 3104

From www.mountlemmonfire.com

Everything is being done to save Mt. Lemmon. This fire is ranked #1 in the Nation!

Orders Received!
EVACUATE the entire mountain!

ALL PEOPLE MUST BE DOWN BY TOMORROW 10:00 SUNDAY MORNING, MAY 26

*This evacuation may be at least a week long. Red Cross will be set up at Sabino High School and will serve as a resource headquarters. Even if you don't need a place to stay, be sure to inform the Red Cross number below as to where you will be staying, so your family members located elsewhere will be able to contact their local Red Cross center and find out where you are or how you can be reached. This news has already gone National!

Looks like things are going down hill for them.

3105. Benefit for Deputy John Anderson

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2002-05-26 04:52:35 UTC
From: Andrew Clark
Topic: 3105 Message: 3105

As many of you may know, Maricopa County Sheriff's Deputy John Anderson was severely injured when he was run over after a pursuit on March 5th. His pelvis was crushed, and he faces a long and difficult road to recovery. To assist Deputy Anderson's family, there will be a benefit buffet dinner at Little Bite of Italy, 15456 N 99th Avenue in Sun City (N/W corner of 99th Ave & Greenway), From 11:00 to 20:00 on Monday, May 27th. Admission is $10 per person and there will be plenty of excellent Italian food for everyone. If you cannot attend, please consider sending a donation to the John Anderson Fund in care of MCSO District III, 13063 W. Bell Road, Surprise, AZ 85374.

A link to the incident is below.

Well, that's why we saw so many car lights coming down the mountain this evening after dark. We even joked about them being U-Hauls. I wasn't really listening to the scanner, so I missed any orders that might have been given.

I can tell you that we watched as the flames, crested the ridgeline that the tankers tried to hit before it was dark. Looks it crossed over in some areas, as I see the flames on the southside of the range now :<

From: Don Armstrong
Topic: 3108 Message: 3108

This may or may not be of interest to anyone, but I have complied
a list of freqs associated with the Coronado Nat'l Forest and all of the
fire activities of recent. I hope someone else is trying to keep a list
of similar freqs for other fires throughout the state this season.

5/26/02

(these 4 are always the first initial freqs for a fire)
169.600 CNF Forest Net
168.150 CNF Fire Net
169.150 CNF A-G
135.975 Tanker A-A

(these are what's been assigned after the fire is 12-24 hrs old)
163.325 "Bullock" fire A-G
166.6125 "Bullock" fire Command Net
166.615 "Bullock" fire
166.625 Air-Ground "Merrit" fire
166.725 "Bullock" fire Operations freq
168.050 Tac "Div. A" "Merrit" fire, TAC "Ryan" fire
168.075 Command "Merrit" fire
168.200 Tac "Div. B" "Merrit" fire
168.250 "Bullock" fire
168.600 Tac "Div. C" "Merrit" fire
168.625 Air Guard "Merrit" fire
168.700 "Bullock" fire Air Attack Command
411.475 "Bullock" fire Flight Following
411.525 "Bullock" fire
411.750 "Bullock" fire Command Net
415.525 "Gardner II" fire, "Bullock" fire

118.950 Rotor A-A "Ryan" fire, "Bullock" fire
119.475 "Bullock" fire
122.225 Victor Phx brush fire (BLM??), "Bullock" fire fixed a-a
122.575 "OVERSITE" FIRE
122.750 Fixed Wing "Merrit" fire, "Bullock" fire A-A to and from
Libby
122.850 Rotor wing A-A "Ryan" fire, "Bullock" fire
122.925 "OVERSITE" FIRE
122.975 "OVERSITE" FIRE
123.025 Helio's "Merrit" fire
123.075 Fixed wing A-A "Ryan" fire, "Gardner II" fire, "Bullock"
fire fixed
123.925 "OVERSITE" FIRE
123.975 Libby Tanker Base Ops, "Bullock" fire helio base
135.950 "Bullock" fire rotor A-A

I will continue to update the list and post it as necessary.
Perhaps we will see a pattern appear (sort-of already can).

3110. Bullock Fire - 26 May 02

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2002-05-26 17:52:21 UTC
From: FLANO
Topic: 3110 Message: 3110

From my house, I can see that the fire has definitely reached the south side of the ridge that they didn't want it to make it over.

Same players and frequencies as the previous days, with some exceptions:

Coyote-40/Blackhawk Helo - conducted a landing zone check up near the radome and surrounding area in case they are needed to conduct an evacuation. They recovered at Marana.

9 tankers are sked for today. One is broke (123) for the entire day. 2 additional tankers are on the way.

I uploaded some pictures of today's view of the fire on the Yahoo site (Bullock Fire -Srn Edge 26 May.jpg).

It is clearly moving up the eastern edge of the Catalinas. They are still battling fires just to the west of it as well.

3113. Bullock Fire - 26 May - Final

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2002-05-27 03:14:38 UTC
From: FLANO
Topic: 3113 Message: 3113

Here is a recap of today's fire fighting:

Biggest concern is the Division D area - Burro canyon. Tankers hit this area hard and heavy today, all day. Helicopters tried to take on the activity in the west. Even though the winds were blowing to the east, the flames continue to travel up along the mountains to the west. Tonight, after dark, it is clearly visible that it made it to one of the peaks, possibly the one with the lookout. This is the peak that is on the eastern edge of the photos that I've posted.

They also want to keep the fire out of Alder Canyon. This appears to be Division T.

Tomorrow they will try a burn-out, first thing in the morning. It may start around the antennas area on Bigelow.

Apparently, a couple of campers thought nothing of the helicopter and tanker activity, let alone the smoke in the area. They were spotted folding up their tent late this afternoon and walking down.

The helo-base is located in ?Sawyers? point. It is also the location for a dip site for the helicopters.

Lastly, only 7 of the tankers are available for tomorrow's operations, due to days off or mechanical problems.

Frequencies:
118.30 Tucson International Airport
118.95 Fixed Wing A2A
122.70 Air Attack A2A (67T and 5LT)---DONNIE - NEW FREQUENCY---
122.75 A2A
123.075 A2A
123.975 Tanker Base
135.95 Rotor A2A
163.325 Air-to-Ground
166.6125/411.75 Command Net
166.725 Tac Net - Division D and Structure
168.15/411.525 Fire Net
169.90/415.525 Forest Net
411.475 National Flight Following (also used by Flagstaff for a fire in the ?Kaibab? area)
416.80 Possibly referenced in traffic by Helicopter - nothing heard
460.875 Mount Lemmon FD (Cabin Search after Evacuation Order)

Air Attack:
67T - "Cliff"
355LT - "Tim"

700SR -

Tankers:
21
23 - out of Prescott
25
26
60
65 - out of Silver City
119
123 - Broke on the ground all day
131
161

Helicopters:
192CH
205BD
210
212SJ
21Z
319
320
336
510 - Type 212, Forest Service
59633 - Type 212
745
747

Miscellaneous:
Coyote-40 (Blackhawk) - In case of Evacuation
Decker-60
N613TV - Phoenix TV-3 Helicopter
Divisions D, H, T, X, and Z
Gila Hot Shots

Thanks for the detailed info John.

I think you may be referring to "Showers Point" for the helo-base. It's a campground area frequently used by boy scouts. Our cub scout pack had a campout planned in a couple of weeks at Showers Point...I'm guessing we will have to cancel it :-(

Date: 2002-05-27 09:53:14 UTC
From: mmi-comm@juno.com
Topic: 3115 Message: 3115

Are these still the frequencies for Mesa SID?:
SID1 867.1125
SID2 866.8375
SID3 866.8125
The reason why I ask is I have not heard any activity on SID1 recently.
Any info would be appreciated.

I show 867.0875 as SID3, but otherwise you have it correct. SID should still be active and SID1 should be simulcasting all HOT Traffic announcements as usual.

3118. Bullock Fire - 27 May - 01

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2002-05-27 17:14:35 UTC
From: FLANO
Topic: 3118 Message: 3118

Everybody is on the way up to the fire this morning. If you've seen the pictures that I've posted, "Saulers" point is the end that I can see that is on fire. They have the tankers working that edge to the south and down the ridgeline to the "Smokey Bears".

The Heavy Helicopters are working the fire at the bottom of Mt Bigelow, the middle of the fire.

New Frequency - 169.15 - I heard either prop or turbos on it and making reference to the fire. I've also heard CNF on it as well. Can anyone ID this one?

Same players as yesterday....

John
SE of Tucson

p.s. Saulers Point is definitely not Shower Point. They are clearly saying Saulers/Sawlers Point. It is also a dip site and is below some antennas.

3119. Re: [ArizonaScanner] Bullock Fire - 27 May - 01

New frequency for the Air Attack Relief Briefings - 123.45

Donnie, I think I might have misstyped at some point 123.975 is tankers only. Helo Base is using 135.95 as well as the Rotors.

Thanks,
John

Heads up Tucson folks... Libby Tanker Base is advising the
tankers to refuel in Tucson unless they want to wait for approx 2 hours.
I guess theres a fuel shortage 'round here at the moment!

It sure has been cool listening to those "round" motors for last
few days! I'm in the pattern for both inbound and outbound from Libby!
I just stepped out onto the front porch, and I can now see the
smoke to the north of me... it appears to be drifting somewhat east
today... hope the smoke hasnt been bothering you'all too much like it did
here a couple of weeks ago!

Date: 2002-05-27 20:39:28 UTC
From: FLANO
Topic: 3118 Message: 3125

Well, the AV-Gas situation continues. It is not a problem of gas, but trucks to pump the gas. TIA has one that broke down, but is trying to crank up to a third truck. Libby's access is limited due to the diameter of the hoses. They are also considering Ryan and Nogales, although the tankers aren't very excited about Nogales. Ryan has only 1 fuel truck, so not a lot of help. Marana was also mentioned.

Coronado-1 is in the area. He was aboard an aircraft that landed at TIA.

They are really worried about the fire near Mt Bigelow. Air Attacks have stated that if it gets within a half of a mile to the antennas, the FAA will have to be notified, since it will effect their control of the air traffic going east and west. At this time, it is not that close.

I don't remember if I mentioned that aircraft are also supposed to check in on 125.10 with TIA for flight following.

Critical-Air-3 picked someone up at Mt Lemmon this morning.

Phoenix TV Channel 3's helo is up again (Helicopter-TV3).

Kelly :)

Thanks for this one. I've been trying to figure out where Burro Canyon is exactly, now I know :) My topo atlas of AZ doesn't get this detailed....the western most edge of the fire near the highway and Barnum Rock is what I have been watching from my home.

Keep them programed in your radio and just wait they will at times be very active at night during sting's on drug house's and working girls of the streets during the evening hours. When I lived in Mesa near Dobson and Main I would here Scat Units and other's on simplex watching the "TARGET HOUSE" or subject. Then it would go quite I would here nothing for days sometimes a week would go by nothing happening and then they would be active again. They still have a working transmitter on Thompson Peak with one of the SID freq's up there that I am aware of

Tanker-119 blew the number 2 engine and is enrte to Ryan Field.

Heli-320 got the pleasure of ferrying around VIP's today, among them Coronado-1, and Congressman Jim Kolbe.

Can anyone capture the map off of the TV news? It has a great breakdown of where all the "Divisions" are located within the fire area.

Fairly quiet and routine at the moment.

John

Kelly,

That's Libby AAF's freq. You are lucky to hear that one. I can't hear Libby, even though they are just south of me. The Santa Rita's are in the way:< I'll plug it in anyway, since I can at least hear the Tanker side :>

I do know that the Air Attack has complained about interference on 163.325 from spanish language. This is the Air-to-Ground frequency and is pretty important as the Air Attack uses it to coordinate with the different Divisions. Don't be surprised to see this one change by tomorrow....

John

John,

I am getting air tankers on 124.950. Sounds like they are going back to Libby on there. Is this a new freq or has it been in use?

Kelly

3136. RE: [ArizonaScanner] Bullock Fire - 27 May - Final

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2002-05-28 02:23:13 UTC
From: FLANO
Topic: 3118 Message: 3136

And so end's the day at the fire, at least almost. A couple more tankers (Tanker-62, 123, and 60; Tanker-65 turned around)are inbound, but the fading light and the smoke and haze is playing havoc with a fairly good containment and preparation day.

Keep an ear for a change to the Air-to-Ground frequency tomorrow.

Basically the same players except for a few new tankers. Tomorrow, one of the lead aicraft has the day off. A lead from Silver City will fill in tomorrow for him.

My Opinion: From my house I can see that the fire near the area "Saulers" Point has broken through the retardent. Unless the tankers get it tonight, looks like it will advance pass this high point on its way to the next.

Local TV is reporting a chance of 50/50 for keeping the fire away from Mt Bigelow and the towers there. There has been a lot of concern for this area all day long. ABC, NBC, PBS are among the TV stations that will go off the air if they lose these towers. Now this is serious! I don't have cable or satellite and I rely on those antennas :)

123.45 was used throughout the day for the relief briefings between oncoming and outgoing Air Attack aircraft. Look for them to continue on a separate freq from the Fixed Wing and Rotor Wing aircraft.

OK, With all the fire stuff going on in Arizona I have made a egroup that we can post to. This is to have a place to upload maps, pics and all things that have to do with wildland fire. This is not to take away from Arizona Scanner but we can now cross post and not take all the file and pics space up in this group. The name of this new group is Arizona Wildland Fire and all are welcome. Let me know what you guys think.

It's going to be a long and hot summer with fire being a big threat!

Thanks, Kelly

Now that we have this separate group, lets limit the wildland details to the wildland group, and all else to remain on ArizonaScanner. Keeping the cross-posting to a minimum will assure that those who aren't interested in wildland info no longer have to see it on ArizonaScanner, and can sign up for the other group if they are.

Hey,

Been meaning to post this, but keep forgetting. Last week, I was around John C. Lincoln North Mountain hospital. In the parking lot I saw a Chevrolet Suburban, red and white, full lightbar & strobes, antenna farm on the roof, etc. It was Marked as Phoenix Fire, and did say "Batallion" on the side, but NO NUMBER. I was able to walk by it, and it didn't seem like the number was removed or had fallen off.

Is this some kind of backup vehicle, or something else?

Later,

Marc - W7/WH6CJD

3153. REACT Vehicles

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2002-05-31 05:01:50 UTC
From: jhguetherman
Topic: 3153 Message: 3153

Recently, I've heard Peoria PD requesting REACT for traffic control at some major (fatality) motor vehicle accidents. I've seen two vehicles used. One is a Ford Expedition, the other is a pickup cab-and-chassis with a commercial work-truck body. Both are white in color, with REACT in large, blue letters on the rear quarter panel areas, and an amber light bar. I believe the pickup had one of those arrow light bars as well. Couldn't tell what, if any, antennas they had.

What I'm most curious about, though, is the offical-looking goverment-type seal on their doors. Something along the lines of Maricopa County DOT in appearance.

There is only one REACT Team in the state, Superstition REACT in Mesa. I had been in contact with a member of the Team several months ago, and recently emailed him again about the vehicles, but haven't recieved any response.

Has anybody else seen these vehicles, or heard any other PD ask for them for traffic control? Any clue as to the agency the seal belongs to, if it is indeed a govermental seal? Any idea of active frequencies? (Haven't heard them on GMRS/FRS. Doesn't mean they don't use them, just haven't heard them yet.)

The vehicles you are seeing in Peoria with REACT on them are City of Peoria Vehicles. REACT is an acronym for something, but I forgot what it is.

They are official government trucks, owned and operated by the City of Peoria from my understanding.

I'll do some checking and let you know what REACT stands for.

Mark & Kevin,
Could have been 1 of 2 things. It could have been a reserve BC Suburban as the reserves either DON'T have any designation on them or they throw on a magnetic sticker that says Battalion with no number.

Or it could have been Battalion 8 from Station 41 which is a temp BC out of that station which may not be marked as BC8. The North & South Deputy's Excursions are marked. Or they used to be.

Also, Rural Metro BC related. I was at their 1st Alarm Medical on the Loop 101 & Frank Lloyd Wright Thursday night. Sounds like BC814 was finally renamed BC816 after at least 7 months of being moved to Station 816.

It was most likely BC8, possibly BC6, both relatively new BC's in the north valley. BC8 is the newest, and runs out of the old North District office at 41. The North Deputy now runs out of new station 30. Whether it was a reserve rig or their normal truck is impossible to determine, but I can't think of any other BC that may hang out up there. Now, we can take this a step further, and really stretch it a bit. It could have been practically anyone using a reserve truck who had to run an errand to JCL, in which case it could have been anyone from a secretary to the Fire Chief himself.

Nice find, Tracy!

Even better, go to http://www.aztech.org/overview.htm
and scroll down to the first "headline" on the left. It's a Peoria PD sergeant
thanking REACT for all their help in Peoria.

Apparently from this site, this REACT organization has neither anything
to do with the radio REACT group, nor any affiliation with the City of Peoria.
It's part of the Maricopa County Regional Transportation Partnership (the
valleywide transportation planning and management group) administered by
MCDOT.

I'm sure those who are interested found this on the REACT website, but
http://www.aztech.org/react/callouts.htm
has their callouts for 2001. I also found info on another page that said
MCDOT is starting REACT in 4 phases, all of which follow the 4 MCSO districts
(see SWFD for the map). The first phase is MCSO District 3 (NW Valley),
and that's why all the REACT callouts are county, Peoria, or Glendale.

Date: 2002-06-01 01:54:58 UTC
From: Dan Rollman
Topic: 3161 Message: 3162

Not at this time. PCSO is on a EF Johnson MultiNet II system (which uses ENHANCED LTR protocol, not standard LTR) and there is not currently a commercially available scanner that TrunkTracks it.

Kelly,

I believe the fire you are talking about is a Rural Metro fire at a hotel on Irvington. Several fire depts are there on M/A including TFD, & military. Bad water problems in the area along with exposure problems. ICP indicated it was a 2nd alarm, but if it went 3rd alarm hard to say.

Thanks all.

The callouts are done via alphanumeric pager. On-scene communications are on the MCDOT talkgroups on the county's trunked system?

"REACT trucks also are equipped with.....all required communication and safety equipment."

Better pictures would be nice too, but now I'm just being picky.

From: walter.howard@juno.com
Topic: 3167 Message: 3168

Yes, that is still the repeater output.

The posting was about the repeater INPUT.

Further information on Wickenburg Fire's new radio on Yarnell Hill.
I did some testing with the radio shop that is installing the new radio.
I can't hear it at the capitol, so I guess it WILL work.

Topic: 3169 Message: 3169

some interesting news arrived in my mailbox if none of you get the Phoenix Fire Works.

1st New Stations
Station 52 (Perm) 21650 North tatum under Const now.
4 bays E52 BC6 scheduled opening is Sept 2002

Station 43 4110 E Chandler Blvd under const now
5 bays at first L43 BC7 scheduled opening Sept 30th

Station 54 99th Ave & Campbell with construction to begin Sept 2003
with 4bays

Station 50 35th Ave & Beardsley const to begin Dec 2002
4 bays with BC & DC offices Scheduled opening June 2003

Station 32 still in planning stages for the area of 40th ST & Baseline
construction to begin August 2004

800Mhz radio system Some you might already know.....
system designed to cover 2000 square miles

Phoenix portion to have 24 radio sites with 9 additional sites in Mesa

system covers from Luke AFB To Apache Jct & Daisy Mtn to Chandler/SunLakes

Dedicated phone lines, fiber optic and microwave links interconnect all the sites.

All City of Phx departments to go to the system in 3 years

City of Phx buys 9,342 radios with 1,446 going to the Phx Fire Dept

each radio costs $4,000 with total cost of radios and accessories approx 61million

Total cost of the Phoenix system is around 123 million dollars

Radio sites under construction now with completion by fall 2002

Testing to begin spring of 2003 with test completion by summer 2003

Phx PD to go to the new system beginning in 2004

Phx Fire vehicle system installation scheduled for November 2004 and completed by July 2005

Phoenix Fire mutual aid partner installation to begin after Phx units.

Mutual aid city installation to be completed by 2005.

WHEW!!!!!!! WE'LL SEE IF THEY MAKE IT!!!

From: n7djr
Topic: 3171 Message: 3172

I monitored them all the time when I lived in Mesa last summer thats the last I was able to hear because mostly simplex is used so I get nothing out here in Gilbert. I used to receive sting operations on simplex alot I lived on W.Main with all those no tell motel's and a few target house's under watch my SED unit's from time to time. There would be days I whould monitor activity on that Ch (1) and then after that it would go silent for weeks and then back again whith heavy SED simplex traffic, it all depends on what they have going.
hope this helps
Dave (N7DJR) Gilbert

From: jhguetherman
Topic: 3174 Message: 3174

I was wondering if anyone knows anything about this department? The SWFD7 shows 158.7525 out/153.8675 in for a repeater. I've never heard anything on it. And 153.8675 is very close to 153.860 which is Rural-Metro channel 6, I have heard their dispatchers. My scanner rounds out .8675 to .865.

I'm looking for confirmation the department actually exists, apparatus numbering, radio channelization, who dispatches them, etc.

Thanks.

The department definitely exists.
As far as I know they are all volunteer and are self dispatched.
I am not sure of the frequencies however.

They do have some very old fire trucks, I do know that. I think it
might be nothing more than a water tender and a brush truck or two.

Mike

Thanks. Heard Wittmann refer to them a couple of hours ago reference a "campfire in the median" and that "Circle City-Morristown would handle". Didn't hear anything on CC-M's 158.7525 frequency, though. It may be a low-level repeater with limited coverage, unlike Wittmann's 154.175 repeater.

I have been taking my scanner to work for the last week and a half trying to search for something. In the process, on Chandler Fire's former dispatch freq (Now Blue Deck 12) 154.430 I have heard a high tone. Most of the time there is nothing else except once there was someone talking and all I got out of it was San Manuel. No PL of course.

Any idea's on this??

BLue Deck 12 154.085 has an input of 155.805 with a PL of 173.8. May I recommend the newest and greatest addition of the Southwest frequency directory that is featured at the beginning of this group. You will find the blue cover by going to "Home" for this group.

For those that haven't already read it, Uniden is NOT seeking beta testers for their new APCO 25 digital scanner. Here is the article on the Strong Signals website http://www.strongsignals.net/access/news/news.cgi?type=single§ion=radio&entry=606

3192. RE: [ArizonaScanner] Digest Number 674

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2002-06-14 02:43:09 UTC
From: Dan Rollman
Topic: 3191 Message: 3192

Charles,

Where did you initially hear they were seeking Beta testers? The original letter below basically asks individuals to email and tell them what type of digital system is in your town, so Uniden can decide if they themselves want to visit. According to the update on the StrongSignals site, they are still seeking that limited information by email. Was there some info from Uniden I missed that originally implied Beta testers? Just curious where mention of "Beta testers" came from.

Dan

My mistake, I hadn't read the message thoroughly and thought it was the same message that had been posted on Scan-L and had been on the Strong Signals site. Apparently some idiot was circulating an email that Uniden was looking for beta testers for the new digital scanner. Now that I actually read the message, its not the one I thought it was. Sorry for the confusion.

Two places to check. The first place is my own website what has trunking information is at http://members.cox.net/n7qyk and look for the link to "Central Arizona Trunked Radio Information" which will get you started. The second place to go is to www.scannerstuff.com and order the Southwest Frequency Directory", an awesom volume of information for the entire state of Arizona.

Hello,

Yes as Charles said the guy was circulating the email. I did receive an email from Scott from Uniden and he said they are doing the field testing themselves. I sent him some brief info on the current APCO-25 system here in the valley with a few talkgroups and control ch's. I asked him to email me with the results of how the digital scanner operates on the Maricopa County System.

Thanks guys for doing that meeting last night, sorry for getting
there a few minutes late (I underestimated the drive time), and I really
thank you'all for those new freqs, some of those I have been looking for
for some time now! They will be added to my database this morning. I am
looking forward to the get-together next month, those demo's will be
pretty cool!
Once again, thanks alot for the reminder, and dont forget to post
the next meeting here.

73's Donnie

Somewhere in the "pucker brush" near
Libby Army Airfield
Ft Huachuca Az

P.S.... 151.415 has been really active this morning, and I was
able to copy it pretty well in Tucson last night.

To you all:

If you've an interest in helicopters, do go and review Alex Calder's terrific chopper resource Helispot.
Alex has spent hundreds of hours assembling thousands of pictures of almost every chopper made worldwide.
He includes links to their manufacturers, so if you've ever wondered "Who makes that, and how do they use it?", here's where you can jump directly to Helispot.

http://www.helispot.com/

As most of us have seen the Erickson Air Crane in use at current forest fires, here's their URL: http://www.erickson-aircrane.com/firefighting.asp

Of interest is Erickson's recently patented 300 GPM water cannon (for use in fighting high rise fires).

Alex is a longtime airborne helicopter videographer/reporter for many LAX TV outlets, and currently is with KTLA.

Enjoy this timely resource.

I have two questions for the group:

1) Is it legal to monitor MDT transmissions?

2) If it is, does anyone have the MDT freqs that Phoenix PD uses?

No. A couple courts back east have found that MDTs carry an "expectation of privacy" (the same legal concept that makes monitoring cell phones and alpha pagers illegal) so you can find yourself in a heap of trouble if ever you monitored MDTs and a young federal prosecutor wanted to get some quick publicity (as happened a few years back in NYC to make monitoring alpha pagers clearly illegal). A few idealists will disagree and say "no one has ever been actually convicted of MDT monitoring so it is still legal", (duh, when everyone pleads out no one gets "convicted" per se) but I wouldn't recommend being the first example.

There is a fire at Cibeque on the White Mt. Apache
Reservation. Approximately 300 acres at 9:00 PM.
No structures threatened at this time.
Frequencies:
Victor: 122.425
Firenet: 172.675
Apache-Sitgreaves: 169.950 (West)
Air Tac: 169.200
Keep you posted, John

From: jhguetherman
Topic: 3211 Message: 3211

According to the NFPA catalog, there seems to be a difference between fire inspectors and fire investigators. What is that difference?

103198 NFPA 1031: Standard for Professional Qualifications for Fire Inspector and Plan Examiner, 1998 Edition

103398 NFPA 1033: Standard for Professional Qualifications for Fire Investigator, 1998 Edition

From: jhguetherman
Topic: 3212 Message: 3212

Does anybody have any information on frequencies and channelization for Lake Mead/Lake Mohave and Hoover Dam? I don't see any listings at all in the SWFD7. There is one list on the ScanCSP website, but I don't know how accurate it is.

Somebody on socalscan was looking for info for the Laughlin area, and the lake is part of that area.

I'm sure Dave Greenburg or someone like that can give you a more precise answer, but the short of it is...

A Fire Inspector comes before a fire, and Fire Investigator comes after.

Inspectors generally make sure buildings are in compliance with fire codes, have proper plans, watch for overcrowding calls, things like that.

Investigators show up when what the inspector did didn't quite work, and the place still burned down. :) They figure out how / why.

Think in terms of law enforcement. A fire inspector is like a DARE officer. A fire investigator is like a detective sergeant.

John,

I have noticed that your questions were posted in several areas and most have been answered pretty accurately. A Fire inspector comes before a fire to enforce codes etc and a fire investigator does just that. Investigates the cause of a fire after it has happened.

47.42MHz is their nationwide Disaster Frequency. All of their national Disaster vehicles operate on this frequency.

There are also several UHF channels licensed for Secondary Usage, but they're not in use in AZ at this point. Most communications is being handled by Satellite Phone and Amateur Radio between shelters and sites.

Here are the UHF frequencies (in MHz). You might hear something on them...

453.425
453.475
453.525
458.425
458.475
458.525

Red Cross also maintains licenses for HF frequencies, but I doubt you'll hear much at all. (All freqs in MHz)

2.8024
3.1714
5.1364
5.1414
6.8595
7.5505
7.6985

Scott :)

Picked up the 162nd FW/ANG CAP Flight (Puma-31 with wingman) and Tanker-82 the reufeler for the CAP. The CAP reacted to a couple of aircraft in the area. A US Customs aircraft was also working in the area (Omaha-01). At about 1pm, someone simply stated "Air Force-1 Robin". Unfortunately, I can not tell you which freq it was on, since I was scanning all of the NORAD/WADS, Rodeo-Chadiski Fire, and other related freqs. I left the tape running and the scanner was unattended.

Pretty much uneventful :>

John,

In Tucson a Fire Inspector is a promoted rank equivalent to Engineer or Paramedic. You have to be one of the three to get any higher. All the fire investigators are fire inspectors, at least in rank status. The have the same initial training with additional training related to just fire investigations. NFPA does outline different qualifications for each of the titles and that is because the duties are so vastly different and sometimes complex. The previous responses sum it all - one comes before the fire (hopefully) and the other after the fire. In Tucson, fire inspectors are routinely called after the fire as well to address any education or enforcement issues to prevent reoccurrance. Both titles in Tucson have the authority to take a person or entity to court. Hope this helps...

Wayne

3229. Tucson Fire Response Channel Change...

Yahoo group: ArizonaScanner (1999 — 2002)

From: waynedc61
Topic: 3229 Message: 3229

Effective 1 July, TFD will assign all fire / haz mat repsonses to F-1 (453.1) and all EMS responses north of Broadway to F-3 (453.6). There are no other changes to the channel lineup at this time. This change will facilitate safety on the fireground by allowing portable radios to identify the primary fire frequency quickly in any environment.

3231. APS/SRP Aircraft Frequencies?

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2002-06-26 21:34:12 UTC
From: icp803
Topic: 3231 Message: 3231

The other day Bruce Haffner NEWS-3 was flying alongside an APS chopper cruising their power lines north of the rodeo fire. I've been trying to get the freq they use (tried the trunked system freqs for Gila and Maricopa cnty with only ground crews found on those)

If anyone has the freqs please advise. Thanks

-Mike

3232. While searching for Forest Service freq's I found these?

From: n7djr
Topic: 3232 Message: 3232

Anyone have any idea who made be using these couldn't find them
listed anywhere?

162.6375-DES
173.6375-DES
164.650-Digital didn't sound like the usual DES noise more like MCSO
type of digital sound
166.200-Voice
162.7125-voice

3233. RE: [ArizonaScanner] While searching for Forest Service freq's I found these?

From: Dan Rollman
Topic: 3232 Message: 3233

166.200 is the VA Hospital operations, per Southwest Frequency Directory 7.
Don't know on the others.

Dan

Thanks Dan,
I have been searching around the Gov. VHF band and found those
encrypted signals? I just started the 138 to 144 band and found
138.580 AM to have some kind of air comm traffic not sure what they
are talking about yet but I think it may be CAP or some other Gov.
air control channel maybe for the fire?
Dave

3235. Updated Frequencies & Talkgroups posted

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2002-06-27 20:41:23 UTC
From: Dan Rollman
Topic: 3232 Message: 3235

ArizonaScanner members,

I've posted 3 more pages of page-by-page updates to the Southwest Frequency Directory 7th edition book. SWFD-7 updates are on a password protected website, but are available free to all SWFD-7-AZ owners. If you own a copy of SWFD-7-AZ, then you have the username and password already! Simply go to http://www.scannerstuff.com/Publication%20Updates.htm for directions on locating and entering the password for access to the Scannerstuff Publications Updates website.

This round of updates includes:

- More than 20 new talkgroups for the Central Arizona Project canal operator (an EDACS system). CAP Security unit designators.
- Another updated list of Southwest Ambulance channels and PL tones.
- Updated Tempe PD talkgroup usage, and many more unit designators.
- Rural/Metro FD Scottsdale dispatch protocol update
- New users on the Northwest Fire radio system
- Tucson FD channel usage change

Again, current owners of the Southwest Frequency Directory 7th Edition can go to
http://www.scannerstuff.com/Publication%20Updates.htm
for information on accessing these updates.

For information on SWFD-7 and purchasing the new directory, please see
http://www.scannerstuff.com/SWFD-7-AZ.htm
Arizona residents are NOT charged sales tax on orders from www.scannerstuff.com

3236. Nextel ane 800 MHZ Relocation

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2002-06-28 04:10:17 UTC
From: foresigt
Topic: 3236 Message: 3236

I ran across an article about how Nextel wants everyone to relocate to 900 Mhz. It has some intersting information.

I hope this link comes out okay, if it doesn't work, go to eweek.com, click on "check out this issue" on the left bar and then the article is "Unhappy over Moving Costs.:

3237. June ICP Get Together

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2002-06-28 07:21:59 UTC
From: n7qyk
Topic: 3237 Message: 3237

This is a quick reminder about the upcomming ICP Get Together in Phoenix this Saturday the 29th of June at the Fudruckers on Highland just East of the A51. We meet at 6:00pm and usualy go until 8:30-9:00 (sometimes later out in the parking lot or over on Air Lane by the Airport). Everyone is welcome and you do not have to belong to ICP to attend. We are there for the enjoyment of chatting about scanners and related topics and we generally have a great time. ICP is just the sponser of the get together and several ICP members are usually there as well.

Come on out and say hi!!

3238. New Cell Phone Blocking Technology

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2002-06-29 20:20:27 UTC
From: jhguetherman
Topic: 3238 Message: 3238

From Socalscan:

From: "Clark E. Rennie" <cerennie@g...>
Date: Sat Jun 29, 2002 7:37 am
Subject: Cell phone blocking, New Technology

From today's Los Angeles Times, Calendar Section.
Clark

Phone Breakthrough: No More Bells Ringing?

Tired of those cell phones ringing at the most critical point of a production? Take hope. A team of researchers has developed a wood filled with magnetic particles that can block phone signals. It's perfect for theater doors and walls, says the team leader, Hideo Oka, of Iwate University in Morioka, Japan.

The invention works by sandwiching magnetic nickel-zinc ferrite between layers of plywood, enabling 97% of microwave transmissions to be blocked, he told the New Scientist, adding that it may be on sale soon.

Until now, there have only been two ways of keeping cell-phone mania under control: signal jamming, which is illegal, and reminding customers to turn the machines off--seemingly beyond the capability of some.

From: "jtara" <jtara@c...>
Date: Sat Jun 29, 2002 1:47 pm
Subject: Re: Cell phone blocking, New Technology

Sounds like overblown hype from the manufacturer.

Cell phone signals - indeed any radio signals - can be stopped with metal shielding. It doesn't even have to be solid metal - in most cases a grid can be used. And windows can be coated with a transparent metalization layer.

This company has simply invented a (presumably) cost-effective and convenient material that can be used to block signals.

FWIW, the New York Stock Exchange apparently is shielded. Or, they are good at BSing guests. :) If you go on the NYSE tour, you are told to turn you cell phone off, "but that it wouldn't work anyway". They said that they have private cells inside the building for use by the traders, and that signals from outside are blocked.

From: "jhguetherman" <kb7mib@h...>
Date: Sat Jun 29, 2002 2:14 pm
Subject: Re: Cell phone blocking, New Technology

It's a really dumb and poorly thought out idea.

Yes, maybe it will block cellular (800 MHz) and PCS (1900 MHz) phone signals.

But it will also block 700, 800, and 900 MHz (and maybe lower frequency) public safety two-way radio communications right along with the public's phones. Public safety officials use phones and pager's, too.

When do the first lawsuits and/or criminal charges when someone dies because a firefighter, medic, or cop's radio signal won't get out of the building, start being filed?

I think he meant the conventional or trunked business frequencies used by the helo crews to talk to the company base while flying the power lines. Since I don't listen to them, I can't help any.

Yea, tried the air band stuff and the common helo freq. Also tried the trunked systems for APS/SRP (on the easy valley side at least) with no aero units heard. Theres one aero freq for SRP I found in the SWFD but it's for Coconino cnty. Will try it in my area (ftn hills) for anything.

Dan Rollman has a basic Phoenix list at:
http://www.scannerstuff.com/frequencies.htm That should get you started.
Dan is the author of the Arizona Frequency Directory, which is a valuable
addition to any scanner user in Arizona.

Topic: 3247 Message: 3247

If you're interested in daily grant activity, check out http://www.scannermaster.com/scanner/en/frequency/fcc/daily_fcc - a free site (log-in required), courtesy of Scanner Master and available since early this year. The host notes that an occasional hiccup may take the site down, but they're constantly looking for ways to improve it.

Subject: [ArizonaScanner] Scanner codes

I am new to Arizona, was wondering if anyone could help me with some
codes for my scanner, I have a bearcat Uniden BC60XLT and was wanting
some codes for Phoenix, Sun City, Suprise, El Mirage, Glendale,
Avondale, and around
Thanks to anyone who might be able to help me, or guide me on where
to look.
Neal

How old is this list?

DPS and Rural Metro divied up the Sheriff's 460 channels.
And MCSO on low-band???? I don't think so.

Phoenix PD has all their MDT's on 800.

Best bet is to get the 1 page sheet from the Scannerstuff website.

From: Dan Rollman
Topic: 3243 Message: 3250

It looks like two lists put together. The first one is really old and outdated with all kinds of errors. The second one, (about 3/4 way down) beginning with "Phoenix Area Scanner Frequencies" he did in fact take from the sheet on the Scannerstuff website. He just didn't bother to say so, and he deleted all the references to SWFD and the source that was in the list.

So if anyone would like to see the same list, with proper formatting, it's at: http://www.scannerstuff.com/frequencies.htm

Some of the stuff in that first list I haven't seen (or been active!) since the early 80's.

Dan

3251. Mesa PD hot tones

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2002-07-06 16:40:51 UTC
From: mmi-comm@juno.com
Topic: 3251 Message: 3251

Anyone know why Mesa is now using a single beep for a hot tone instead of the usual three beeps?

Lazy dispatcher? New comm center supervisor saids he wants one only from now on? Or they have those new computer radio dispatch consols where at the click of a mouse the tone is generated by the system.
Had any luck with SID?

I live in the southeast valley the nearist military air would be williams. I work on the west side,I hear luke fine.
I am looking for active frequencies in the or around the valley in addtion to the one's listed in my copy of the SWFD.
Anyone out there who monitor's Satcom or military UHF am air band I would be greatful for the info.
Dave

Just a curious thing of if the Suburban you saw was the new style of the older 80's style. I personally disasembled Bat 4's old 4X4 that became Bat 6's. It had apperently sided into a retaining wall or something. Does anyone know the story on the wreck?

> Been meaning to post this, but keep forgetting. Last week, I was

If memory serves me correctly, it was the newer, late '90s style Suburban. Not the older "box" looking ones.

I haven't seen that vehicle since that time at the hospital.

Dave, Dan and all others I can help ID some of those UHF freqs;

271.1 BMG Range Control , 63rd FS- Panther Ops CP
274.0 Yuma Range Control
276.9 Sells "A" & "B" MOA
296.5 BMGR North Tac
301.4 ????
305.6 BMGR East Tac
308.9 BMGR Air-Air HIGH
338.9 Gladden/Bagdad MOA XV
373.1 Gladden/Bagdad MOA WYU Pri / WY
379.7 ????

I cant take credit for all of the above info, but I believe it to
be pretty darned accurate!!! Any help on the 301.4 and 379.7 freqs would
be appreciated!

73's Donnie

From: walter.howard@juno.com
Topic: 3262 Message: 3262

I hope that some of you can help me with some radio
traffic I'm hearing on UHF Interagency, 460.375.

I think someone has a crosspatch engaged and isn't
aware of it.

It sounds like a dispatch operation, possibly at a college
(NOT ASU, I already checked).

I have heard some tactical callsigns like Ocean1, and
Charlie1, some parking lots and motorist assist traffic.

Could some of you listen to the traffic and give me some
idea who it is?

I'm hearing it at DPS HQ north of 19th Ave and McDowell.

Hi Walter.

The only agency I have ever heard "Ocean 1" is Tempe PD. Ocean 1 is a sergeant and I forgot his name. I did a ride with him about 2 years ago and they had some problems with a errant cross pass that day.

Hope that helps!

Hi Mike
I did not mean to point blame at you guys.
I did a ride along with two sergeants who were doing a prostitution sting along Apache (was doing a feature story for a local newspaper). I remember one guy kept calling himself Ocean 1. We were on a separate talk group. Maybe that was an old call sign? Or maybe it was just their "code" for the time.
I dont monitor Tempe so much so I'm not sure if maybe they use to use such call signs and have since switched to the type you describe now.

The day I rode along, I remember dispatch calling the units and telling them to switch talkgroups, as they were having some interference problems and DPS had called to inquire.

Was just trying to help Walter out a bit. Did not mean cause any "inter-agency" disputes or friction!

Mike

3267. RE: [ArizonaScanner] Need some help - Additional

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2002-07-11 00:06:51 UTC
From: Dan Rollman
Topic: 3266 Message: 3267

After pondering this for a few minutes and on a hunch, I twisted words around in an internet search engine. I've come up with a theory that others can see if they can give any support to, or determine is the wrong path, based on transmissions heard... either way...

Check out: http://www.mc.maricopa.edu/other/redmountain/generalinfo/

That page is for the new Mesa Community College Red Mountain campus. On it, it discusses how they use the Palo Verde building and the Mesquite building. It would not be unlike such a place to have a parking lot 'G' (though it is not marked as such on the campus map there), bike patrols, and of course sound like a college PD or security. So my thought is to follow the Maricopa County Community College District Security department route and see what comes up. Also, page 115 in SWFD7 has a set of entries for Maricopa County community colleges... perhaps the audio on one of those will match up.

No friction with me. I have teenagers and they use up all my friction. I did some checking and did find out that we do in fact have Ocean call signs. My mistake. They are used exclusively for Off duty call signs. In checking with the dispatch supervisor she also said they may use them on multi-agency prostitute stings. I asked if they set up a patch for that and she said she had never done it but this traffic is mostly at night and not on her shift. I will do some further checking. Sorry for the confusion on my part.

Hi Mike
I did not mean to point blame at you guys.
I did a ride along with two sergeants who were doing a prostitution sting along Apache (was doing a feature story for a local newspaper). I remember one guy kept calling himself Ocean 1. We were on a separate talk group. Maybe that was an old call sign? Or maybe it was just their "code" for the time.
I dont monitor Tempe so much so I'm not sure if maybe they use to use such call signs and have since switched to the type you describe now.

The day I rode along, I remember dispatch calling the units and telling them to switch talkgroups, as they were having some interference problems and DPS had called to inquire.

Was just trying to help Walter out a bit. Did not mean cause any "inter-agency"
disputes or friction!

Mike

The patch is still active right now. Not much traffic at the moment. Slow afternoon.

Ocean followed by a 3-4 digit badge number are typically off-duty officers. 1-2 numbers, I don't know. Charlie may have different meanings by agency. In Peoria, they seem to be detectives of some sort, but I haven't confirmed this. Charlie 30 sounds like a supervisor, while Charlie 323 would be one of his squad. I haven't been listening closely, but I don't think it's Peoria.

Any way, I just heard a unit id of "Ocean 99".

Dispatch about an alarm going off in the "Village". Alarm test, it appears.

Woman locked herself in her office, in the "Curt" Center (?), top floor, opposte the dean's office. Gotta be a college.

Don, (or anyone else), can a DPS dispatcher come up on the channel and request the unknown college to id themselves? That would seem to be the easiest way to find out. Or just telephone around to each college and explain what is being heard, and ask if they are inadvertantly patching? Does any agency monitor full-time, or have specific responsibility for the 460.375 repeater? Like MCSO?

There is a high-speed CW id'er on it. CTCSS is 100.0 Hz, if that helps any.

John H. Guetherman
Peoria, AZ.

An officer just stated he is the only one on campus now. Didn't catch the reason.

There are 2 Morse Code id'ers. One high speed, and a second slightly slower, and doesn't id as often. Is anybody good with reading Morse Code, or have an automatic reader they can try? Okay, the second one just popped up again, and came across both 155.475 and 460.375 together. That's probably the id for the link between them or something. The campus security folks are not coming across 155.475, at least I don't hear them.

The time that the dispatcher is giving appears to be about 7-8 minutes fast. One was 16:43, and my clock said 16:35 or so.

John H. Guetherman

John,
Just record the morse code ID and play it back at 1/2 speed if you can
do that with your recorder or over and over listening for the DTI and
Dash of the message and just write it down. The tape recorder will help
a lot.

Found it.

Red Mountain Campus of Mesa Community College,
just like Dan suggested.

The vendor (who shall remain nameless) installed a
repeater with the output on 155.475, which is picked
up by the Inter Agency Radio System and rebroadcast
on 460.375 to the entire valley.

Spoke to them today, and the vendor will be fixing it "soon".

Thanks to all who helped.

Again, you guys are great.

Phoenix FD paged all alarm room personnel to respond to the alarm room within the past few minutes. Looks like we might actually get something out of this lightning storm tonight. Wonder if it'll get the Northwest Valley with more than just winds and a distant lightning show?

Didn't hear any page for storm deploymment mode. I've been wondering, when they say to un-co-man the co-manned units, what do they mean?

I got at least a 1/2 inch at my house at 59th and Pinnacle Peak.

Also got a call about some "weird" things happening at our South Mtn
site.
Technician dispatched to investigate. Sounds like we took a lightning hit
nearby.

The PD command was to take two man cars and make two one man cars.

John-

thats when the 4 person ladder/LTgoes to : 2 bls on the big ladder,2als from the engine to LT and 2 bls from ladder to engine(4 on the E). It makes the engine bls to run fire/storm calls.Thats what it was recently.I stand corrected if i am wrong.Oh yea,if the station has a brush truck, a ff from the engine jumps on the brush and follows the engine on calls.

Thanks for the info.

Didn't get too much rain here. Some, but no flooding in the immediate area that I saw just before 5am. Got a good bit of wind, and a nice lightning display out of it.

I noticed earlier that the 162.550 NWS transmitter has some kind of problem. It was still transmitting, but the audio was lousy. Lightning strike? (91.5, 93.3, 97.9, 99.9 and 102.5 FM stations also went down for at least a short time last night. 91.5 came back on just after 11:30pm.) Also noticed that I could hear 162.400 Tucson, 162.425 Flagstaff, and 162.525 Sedona here at home without an outside antenna. (Just checked again. 162.550 is working now, and the other 3 are still audible.)

Walter Howard said:

>> Thanks for allowing this slightly off topic discussion.

On the contrary, Walter, for me at least it's been a very informative discussion. I would hope that anyone who thought your discussion was off topic probably doesn't realize how much of a help you've been to us.

For example, we learned:
1) About Tempe use of Ocean callsigns.
2) About a new Campus security group and possible radio traffic from it.

and we also had a great reminder from Dan Rollman about using resources such as Google or other Internet search engines to dig for information.

Maybe it's because of my background as a Voice Intercept Specialist in the Air Force many years ago, but I've always considered it a joy and a challenge to listen to radio communications, determine who was talking, and "break" any codes that the communicants are using. It doesn't take long to narrow things down.

You shared with us a challenge you had, and that gave the scanner community an opportunity to "pay back" professionals such as yourself for the information you have provided in the past.

I'd say we're a long way from getting even.

The NWS is in DPS's building on South Mtn.
We were having generator trouble. It kept cycling on/off every 2-3
minutes.
I ended up babysitting the site until the power came on and the generator

and A/C technicians got there. Got the call about midnite, got back to
the
shop after 8 AM

3291. Park Ranger SUV question

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2002-07-18 12:30:04 UTC
From: jhguetherman
Topic: 3291 Message: 3291

Late last night, I saw a white Chevy Tahoe or Ford Expedition with a light bar, "Park Ranger" in gold (?) on the side, and a blue stripe down the side, eastbound on Olive Ave. from 91st Ave. I'm not aware of Peoria having Park Ranger's, so I'm wondering if this was from a neighboring city? The county calls their's Park Police, so I don't think it was them.

John H. Guetherman
Peoria, AZ.

3292. Glendale APCO-25 TRS

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2002-07-18 14:16:09 UTC
From: Dan Rollman
Topic: 3291 Message: 3292

I don't recall if someone has posted this paragraph before or not, but Glendale's future digital TRS is mentioned in it by Motorola. Copied from the DIGITAL-SCANNING list.

Dan Rollman
www.scannerstuff.com

---Original Message---
Date: Wed, 17 Jul 2002 13:04:58 -0400
From: iDEN-i100 <Marcelrf@...>
Subject: New Motorola Systems-

During the quarter, Motorola received an order from the city of Cincinnati, Ohio for an
ASTRO(TM) 25 digital system. The system is compliant to the U.S. Project 25 standard for
public safety digital radio communication. Motorola also won digital two-way equipment
orders from Winston-Salem, N.C., Glendale, Ariz., and several federal government agencies.
Outside the U.S., Motorola was awarded equipment orders in Australia, China, Colombia,
Germany, Israel, Kenya, Puerto Rico, Spain and Venezuela.

3293. Re: Park Ranger SUV question

Yahoo group: ArizonaScanner (1999 — 2002)

From: jhguetherman
Topic: 3291 Message: 3293

Okay, apparently, Peoria does have 2 Park Rangers now. And I noticed that one of their Animal Control trucks has the same gold lettering I saw on the Park Ranger SUV, so it was most likely a Peoria Park Ranger. They use cell phones, not two-way radios.

I've gotten some info on Peoria PD that I'll consolidate into a post sometime this weekend.

John
Peoria

3294. Re: [ArizonaScanner] Re: Park Ranger SUV question

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2002-07-19 23:02:51 UTC
From: Emtb55868@aol.com
Topic: 3291 Message: 3294

JOHN-

do they use cell phones or cellular based radios?? using cell
phones just doesnt sound right.maybe a Nextel system or 8-900Mhz radios....is
the radio system compatible with what they are going to at the pd--

don

3295. RE: Glendale APCO-25 TRS

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2002-07-19 23:03:43 UTC
From: ravenfalls@aol.com
Topic: 3295 Message: 3295

Hi Dan,

I mentioned this about 3 months ago. From the progress I heard the system should be complete with 1-2 months. Also the system will be analog until the end of the year when the digital radio are expected to arrive for Glendale to use. This is what I heard a few months ago but anything can change.

As far as sites, Glendale will keep Shaw Butte and add a site at the Glendale Airport.

I know that varies from state to state! I do not know what the law is in AZ. I do know in FL it is against the law. I believe that is a major point in the Paula Jones case. I believe that was the case in point??

From: Dan Rollman
Topic: 3296 Message: 3302

Hi August,

It happened in 1994, during the 103rd Congress. Sure, I can do my best to point you...

A good summary of what's legal and what is not is at http://www.strongsignals.net/access/content/laws.html

From there, go to http://nf2g.com/scannist/us_laws.html for excellent detail on U.S. Federal communications laws and regulations.

Dave writes "Public Law 103-414, known as the Digital Telephony Bill, was enacted in November, 1994. One of the amendments to this bill adds cordless telephones to the list of prohibited listening targets in ECPA."

You can then go to thomas.gov and see that Public Law 103-414, Section 202 (which was H.R. 4922) modified Section 2510 of Title 18 of the United States Code (which was the original Electronics Communications Privacy Act, or ECPA) to add cordless phones to the list of illegal things, with an elaborate legislative description of what a cordless phone is (the skinny: it's exactly what we all think of when someone say "cordless phone"). :-) I'll do the work for you and tell you the link is http://thomas.loc.gov/cgi-bin/query/D?c103:1:./temp/~c103le64Sn:e37379: Browse around that bad boy for a while, and go to the main page of H.R. 4922 at http://thomas.loc.gov/cgi-bin/query/z?c103:H.R.4922.ENR: if you get bored with Section 202.

3303. Peoria PD/Park Ranger's

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2002-07-20 07:19:52 UTC
From: jhguetherman
Topic: 3291 Message: 3303

A friend of mine with the PD ran across my email address and contacted me, so I decided to ask a few questions. That's how I got the info. He asked that his name not be posted.

Here's some of the info in a Q and A format: (Stuff in parentheses are mine.-John.)

453.650 Ch. 1 Repeater PL 162.2
453.650 Ch. 2 Direct PL 162.2
460.600 Ch. 3 Repeater PL 127.3
460.600 Ch. 4 Direct PL 127.3
460.350 Ch. 5 Repeater PL 141.3
460.350 Ch. 6 Direct PL 141.3
453.675 Ch. 7 Direct-only PL162.2
460.375 Mutual-Aid
453.275 (El Mirage/)Youngtown (Car-to-Car)
453.100 Phoenix PD North Chase 1
453.450 Phoenix PD South Chase 3

Q: Are the PD's radios programmed with any other agencies' channels, or the 460.375 mutual-aid channel?

A: We have mutual aid, Youngtown, and some have Phoenix North and South Chase. These are not channel numbered, they just have the alpha ie. "Chase S" on the Spectra displays.

(458.675 (KNGE453, 200 Watts ERP) and 458.9125 (WPTY913, 2 watts ERP), mobiles only, are also licensed, according to the FCC. I'll ask about them.-John.)

I think the PD got a new frequency, but I don't know what it is as I haven't looked. (460.125 is pending FCC action. File # /0000883574.-John.)

I think the PD should go to the county wide digital system with Phoenix, et al, but the city doesn't want to spend the money to get in on it. From what I hear, the fire department will be going with it due to automatic aid.

I think the system will be done right with the people involved, and since they are providing correct coverage for the FD, correct coverage would be there for the PD.

Our new chief says he wants to stick with 450 UHF.

Peoria added a base, ch 1 only, at Tower Mountain which is microwaved to the Pinnicle Peak facility, which is then microwaved to

the PD. I know they have a voted receiver at Pinnicle Peak, I don't know about a transmitter. (Receiver only.-John) The equipment is housed in a building that is shared with the county wide digital site. I don't know if the Tower Mtn and Pinnicle Peak sites are online (yet).

We are using:

High powered Motorola Spectras in the cars.
HT1000 portables
MT1000 portables
Kenwood mobiles with mobile repeaters out of Pinnicle Peak, not in all units, using kenwood portables. (Mobile repeaters = Extenders.-John)

The mobile repeaters work good, but they are programed wrong. The portable is on VHF, and for some reason they used the Phoenix PD 800 district frequency as the link freq. (155.430-John.)

If Phoenix has their tone turned off, or at the end of a transmission, they can hear our ch 1, and it often interfers with their coms so I don't use it.

Q: What ever happened to the channel 10 repeater they had on 460.4625?

A: That repeater left when (name withheld-John.) lost his contract for maintenance on the radio system.

Q: Is there a list of which Adam unit does what exactly? Adam 807 and 817 I believe are the Animal Control units. 808, 809, 810, 811, 812, 819 are the others I've heard. Why 800 series?

A: I'll get a general list for you on these.

Q: Bravo units. Reserve officer with a regular officer, or the new designator for 2-officer units that used to be Adam cars?

A: Two man cars. We don't have enough cars to go around now, so they double them up when we run out of cars.

Q: Charlie (20, 30, 332, etc.)? Civilian ride-alongs now seem to simply be noted by the officer as he goes 10-8 along with his/her badge number, the car number, MDC or not, etc.

A: Charlie units are detectives now.

Q: John (334)?

A: I don't remember. I'll find out.

Q: Mary 50, and the 550 series are the motors. Used to be all 50 series.

A: M50 is a supervisor and the other motors that are assigned to him start with the third number.

M551 is probably the most senior motor.

When they add another Sgt. He will be M51 and the people assigned to him would be M511, M512, Etc.

Q: Nora (240)?

A: Neighborhood action team. I think it has four members on it. They work on neighborhood problems and try to avoid taking calls and paper.

Q: Sam (675)? Sam 789 is the K-9 Handler (former King 91 or 92?).

A: Sam 789 is our K-9 was King 91

Q: Victor (70)?

A: UC guys

Q: William (551 and others). Bike patrol unit?

A: Walking beat or bike officers not assigned perm call signs. They just take whats open when they work.

Q: What are the disposition codes? I think #3 is nothing found. I hear P-Paul a lot.

A: #1 Report Taken
#2 No action taken
#3 Unable to locate
#4 Arrest
#5 Civil matter
#6 Turned over to .....Fire, DPS, Etc.
#7 Warning (Traffic or criminal violation)
#8 Citation
#P Public relations

Q: Park Rangers

A: We have two park rangers now. Last time I talked to them they have no radios, just cell phones.

No, they are not armed, and as far as I know, they aren't carrying scanners.

They can write city code violations ie. dog at large, parking, Etc.

I think that they only have on the job training. One guy was with parks before and the other was one of our animal control officers.

Again, the city doesn't want to spend the money to buy the equipment.

That's all for now. I'll add any other info I get later.

John H. Guetherman
Peoria, AZ.

3304. Re: Peoria PD/Park Ranger's

Yahoo group: ArizonaScanner (1999 — 2002)

From: jhguetherman
Topic: 3291 Message: 3304

Addendum:

Q: PD has 458.675, which would be the input to ch. 7 if it was a repeater, licensed for 200 watts ERP, mobile only, and 458.9125 licensed for 2 watts ERP, mobile only. Any ideas on what channels they may be on, or they're use?

A: As I remember, Phoenix PD took too long to build all of their 450 system, so we put in an application to "share" it because of it's non-use which pissed off a lot of people. The whole thing went to the FCC to have a hearing and the FCC agreed with Peoria. We put up the ch 7 repeater, I think it was a 15 watt Uniden, and used it until Phoenix got their 450 Channel 6 on the air. We just use Channel 7 as a simplex car to car now.

I have no idea on the 458.9125. We do have a portable alarm system that transmits on UHF when tripped. It's called a VARDA alarm, but it is set up on channel one or three. Maybe they had planned to use it there.

Q: 460.125, one of MCSO's old channels, is pending with the FCC. Any rumors on what it'll be used for? Split the city into North and South precincts, maybe?

A: I saw an e-mail that said it was for "operations". I think they just want to add a channel for expansion since they are laying off trunking.

Q: Are the cell phones used by the Park Rangers strictly cell phones, or are they Nextel? Someone asked about that, they had the same "misgivings" about them only having cell phones I did.

A: Our UC guys have Nextel, but I think the Rangers just have a regular carrier.

3305. ECPA changes

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2002-07-20 09:03:20 UTC
From: jhguetherman
Topic: 3305 Message: 3305

Strong Signals has a link posted on their website regarding changes to amend the ECPA to make certain interceptions a felony under the Cyber Security enhancement act.

Story at http://www.strongsignals.net/access/news/news.cgi?type=single§ion=law&entry=660

Or got to:

http://www.strongsignals.net/access/news/news.cgi?type=chrono

and it's the last news item. Here's an excerpt:

New House Bill Changes ECPA
Posted on 07/16/2002 14:46 EDT

The US House of Representatives has just passed the Cyber Security Enhancement Act of 2002 (H.R.3482) which was designed to "provide greater cybersecurity."

Due to someone's hidden agenda, Sections 104 (Internet Advertising of Illegal Devices) and 108 (Protecting Privacy) amend the wording of the ECPA. The effect is to remove the misdemeanor penalty (less than one year jail time or $500 max penalty) and make it a felony (five years jail time maximum) for the intentional interception or dissemination of illegal signals (as defined in Section 2511 of the ECPA).

There's a link to H.R. 3482 in the story.

So, now it's a felony to monitor cordless and cellular phones. I do believe that Remote Pickup frequencies used by tv and radio stations and the like are also protected under the ECPA. How many of us regularly monitor them? If convicted of a felony, you also loose several other rights: voting, carrying a firearm, holding an Amateur, GMRS, or other radio license, etc.

And besides me, how many of us have, or have had, 49 MHz walkie-talkies, which can receive baby monitors, and the handset portion of some cordless phones? Maybe I'm just a pessimist, but I could see some over-zealous federal prosecutor trying to convict someone using those radios, or having those 5 channels programmed into a scanner.

3308. NAU Trunked System

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2002-07-21 23:54:42 UTC
From: Bryan Goldtooth
Topic: 3308 Message: 3308

Has anyone had the chance to monitor the Trunked System at Northern Arizona University(NAU) in Flagstaff?
I was in Flag the other day and monitored it while on the west side of town.
I picked up what appears to be new channel (talkgroups) on the system.

09936 Heard Baker 40
09712 Dispatch referred to it as Ch 2, also heard Baker 231 running 29 checks. Out at N. 1st Street.

Their was another talk group that I did not write down the talk group and also heard the 1616 talkgroup from NAU Police/Parking.
I did not have another radio with me to check if this was a rebroadcast of the Flag PD channels.
Could barely pick up the system on the East side by the mall. Anyone else have any info?

3311. Jail time for monitoring?

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2002-07-24 20:34:39 UTC
From: Keith Schlottman, KR7RK
Topic: 3188 Message: 3311

I received this on another mailing list today. Have not had time to check
for accuracy, but it certainly seems plausible in the current environment.
Anyone else hear anything about this?

>Thought I'd pass this along.....

>>From: Dave Emery die@...
>>To: fedcom@..., wun@...
>>
>>Something of enormous importance to radio hobbyists has just happened in
>>
>>Washington, and so far I haven't seen any mention or discussion of it on
>>
>>any
>>scanner or ham lists I follow. I hope this message will alert others to

>>
>>what has just happened and get people thinking about the consequences...
>>
>>The House just passed the Cyber Security Enhancement Act (HR3482) last
>>night
>>(7/15/02) by an overwhelming margin of 385-3. Buried in an otherwise
>>draconian bill that raises penalties for computer hacking that causes
>>death
>>or serious injury to life in prison and allows government monitoring of
>>communications and email without warrants in even more circumstances is
>>the
>>following seeming obscure language:
>>
>>: SEC. 108. PROTECTING PRIVACY.
>>:
>>: (a) Section 2511- Section 2511(4) of title 18, United
>>: States Code, is amended--
>>:
>>: (1) by striking paragraph (b); and
>>:
>>: (2) by redesignating paragraph (c) as paragraph (b).
>>
>>For those of you who don't realize what this means ....
>>
>>USC Section 2511 subsection 4 of title 18 (the ECPA) currently reads as
>>foilows.... the CSEA will strike part (b) of this language.
>>
>>Penalties..
>>
>>: (a)
>>:
>>: Except as provided in paragraph (b) of this subsection
>>: or in subsection (5), whoever violates subsection (1)
>>: of this section shall be fined under this title or
>>: imprisoned not more than five years, or both.
>>:
>>:
>>
>>[The following section will be eliminated by the new law...]
>>
>>: (b)
>>:
>>: If the offense is a first offense under paragraph (a)
>>: of this subsection and is not for a tortious or illegal
>>: purpose or for purposes of direct or indirect commercial
>>: advantage or private commercial gain, and the wire or
>>: electronic communication with respect to which the
>>: offense under paragraph (a) is a radio communication that
>>: is not scrambled, encrypted, or transmitted using
>>: modulation techniques the essential parameters of

>>: which have been withheld from the public with the
>>: intention of preserving the privacy of such communication,
>>: then -
>>:
>>: (i)
>>:
>>: if the communication is not the radio portion of a
>>: cellular telephone communication, a cordless telephone
>>: communication that is transmitted between the cordless
>>: telephone handset and the base unit, a public land
>>: mobile radio service communication or a paging service
>>: communication, and the conduct is not that described
>>: in subsection (5), the offender shall be fined under
>>: this title or imprisoned not more than one year, or
>>: both; and
>>:
>>: (ii)
>>:
>>: if the communication is the radio portion of a
>>: cellular telephone communication, a cordless telephone
>>: communication that is transmitted between the cordless
>>: telephone handset and the base unit, a public land
>>: mobile radio service communication or a paging service
>>: communication, the offender shall be fined under this
>>: title.
>>
>>What this does is change the penalty for the first offense of
>>intercepting
>>an unscrambled and unencrypted radio communication that is not supposed
>>to
>>be listened to (e.g. AMPS cellular calls, commercial pagers, cordless
>>phones, common carrier communications) for hobby purposes (eg not a
>>tortuous
>>or illegal purpose or for direct or indirect commercial advantage or
>>private
>>commercial gain) from a
>>misdemeanour (one year or less prison time) to a federal FELONY (5 years
>>
>>prison time).
>>
>>And further this changes the status of the specific offense of listening
>>
>>to
>>a cell call, cordless call, a pager, or a public land mobile radio
>>service
>>communication (eg a telephone interconnect) from a minor offense for
>>which
>>one can be fined a maximum of $500 to a federal FELONY for which one can
>>
>>be

>>imprisoned for up to 5 years.
>>In effect this removes a safe harbor created during the negotiations
>>over
>>the ECPA back in 1985-86 which ensured that first offenses for hobby
>>radio
>>listening were only treated as minor crimes - after this law is passed
>>simply intentionally tuning a common scanner to the (non-blocked)
>>cordless
>>phone frequencies could be prosecuted as a felony for which one could
>>serve
>>5 years in jail.
>>
>>And in case any of my readers have forgotten, a federal felony
>>conviction
>>(even without any jail time) deprives one of the right to vote, to own
>>firearms, to be employed in a number of high level jobs and professions,
>>
>>to
>>hold certain professional licenses and permits, and important for
>>certain
>>readers of these lists absolutely eliminates for life the possibility of
>>
>>holding any kind of security clearance
>>whatever (a recent change in the rules) - something required for many if
>>
>>not
>>most interesting government and government related jobs.
>>
>>So merely being stopped by a cop with the cordless phone frequencies in
>>your
>>scanner could conceivably result in life long loss of important rights
>>and
>>privileges.
>>
>>For some of you out there this may seem small potatoes and irrelevant
>>since
>>it merely changes the penalties for an already illegal act (which you
>>are
>>not supposed to be engaged in) and doesn't make anything new illegal.
>>But
>>this is a rather naive view.
>>
>>The federal government was certainly not going to prosecute a hobbyist
>>for
>>radio communications interception under the old version of the ECPA if
>>the
>>worst penalty that could be levied was a $500 fine - there simply is not
>>
>>the
>>budget or the staff to prosecute people for what would be a very minor

>>offense (equivalent of a speeding ticket). And even prosecuting
>>hobbyists
>>for more serious interception (eg not
>>cellular, cordless or pagers) was still a misdemeanor offense
>>prosecution
>>with jail time unlikely.
>>
>>So in practice the only prosecutions were of people who clearly had a
>>commercial or political purpose or otherwise engaged in egregious and
>>public
>>(e.g. the Newt Gingrich call) conduct - no hobbyist ever got prosecuted.
>>
>>And
>>this was doubtless the intent of Congress back in 1985-86 - it would be
>>illegal to monitor certain radio traffic but only a minor offense if you
>>
>>did
>>so for hobby type personal curiosity or just to hack with the equipment
>>or
>>technology - and a serious felony if one engaged in such conduct for the
>>
>>purpose of committing a crime or gaining financial or commercial
>>advantage
>>(e.g. true spying or electronic eavesdropping). But after this bill is
>>signed into law (and clearly it will be), it will be quite possible for
>>a
>>federal prosecution of a hobbyist for illegal radio listening to be
>>justified as a serious felony offense worth the time and effort and
>>money to
>>try and put the guy in jail even if the offense is not for a commercial
>>purpose or part of an illegal scheme. Thus "radio hacker" prosecutions
>>have
>>now become possible, and even perhaps probable.
>>
>>And federal prosecutors and law enforcement agents get career
>>advancement
>>and attention from senior management in their agencies in direct
>>proportion
>>to the seriousness of the offense they are investigating and prosecuting
>>
>>-
>>nobody ever advances to senior agent for going after jaywalkers, thus by
>>
>>raising the level of less than legal hobby radio monitoring offenses
>>from a
>>jaywalking class offense to a serious felony for which there can be real
>>
>>jail time it becomes much more interesting from a career perspective to
>>prosecute radio listeners.
>>

>>And needless to say, such prosecutions would be shooting fish in a
>>barrel
>>type things given that many individuals are quite open on Internet
>>newsgroups and mailing lists about their activities.
>>
>>And of course this MAJOR change in the ECPA also has the effect of
>>making
>>the rather ambiguous and unclear meaning of "readily accessible to the
>>general public" in 18 USC 2510 and 2511 much more significant, since
>>intercepting something that isn't readily accessible to the general
>>public
>>is now clearly a serious crime even if done for hobby purposes as a
>>first
>>offense. Thus one has to be much more careful about making sure that
>>the
>>signal is a legal one...
>>
>>And further than all of this, and perhaps even MUCH more significant to
>>radio hobbyists on Internet scanner lists ....
>>
>>The careful, thoughtful reader will note that section 4 has been revised
>>
>>a
>>bit lately, and that this new section 4 (see above) now makes it a
>>federal
>>felony with 5 years in jail penalties to violate section 1 INCLUDING the
>>
>>following provisions of section 1:18 USC 2511:
>>
>>: (1)
>>: Except as otherwise specifically provided in this
>>: chapter any person who -
>>:
>>: (c)
>>:
>>: intentionally discloses, or endeavors to disclose, to
>>: any other person the contents of any wire, oral, or
>>: electronic communication, knowing or having reason to
>>: know that the information was obtained through the
>>: interception of a wire, oral, or electronic
>>: communication in violation of this subsection;
>>:
>>: (d)
>>:
>>: intentionally uses, or endeavors to use, the
>>: contents of any wire, oral, or electronic
>>: communication, knowing or having reason to know that
>>: the information was obtained through the
>>: interception of a wire, oral, or electronic
>>: communication in violation of this subsection; or

>>:
>>: shall be punished as provided in subsection (4) or
>>: shall be subject to suit as provided in subsection (5).
>>
>>This seems to have changed the status of revealing as part of a hobby
>>list
>>any hint of the contents of a radio communications that might or might
>>not
>>have been legally intercepted from a potentially minor misdemeanor
>>offense
>>or less to a serious felony. Thus if a court finds that any
>>communication
>>reported on an Internet list was not legally intercepted, felony
>>penalties
>>apply for publishing the information even if the interception was for
>>hobby
>>purposes (which of course most scanner list intercepts are).
>>
>>Most significant for many of us, the section 18 USC 2510 exceptions to
>>the
>>prohibitions on intercepting radio communications in 18 USC 2511 are
>>pretty
>>silent about military communications - not prohibited, or specifically
>>allowed except as "governmental communications". So it is possible that
>>military comms might be found to be illegal to intercept and thus
>>passing
>>around information about them a potential felony, even though of course
>>the
>>military has complete access to the world's best COMSEC technology and
>>uses
>>for anything sensitive. But in a paranoid age (post 9/11) anything
>>goes...
>>and if the government wants to go after scanner lists (like Milcom) it
>>might
>>now be able to do so with prosecutions with real teeth and jail time.
>>Thus
>>the legal climate has fundamentally changed, and one can assume that
>>since
>>the Bush administration has been pushing for the passage of this bill
>>that
>>they perhaps intend to start prosecuting at least some category of radio
>>
>>hobbyists under the new provisions - no doubt as an example meant to
>>scare
>>the rest of us into handing our radios in at the nearest police
>>station...
>>
>>So yet another blow to the radio hobbies.... and a big one indeed...
>>
>>-- Dave Emery N1PRE, die@... DIE Consulting, Weston, Mass.

>>// AAR0JA Hood, swl via DXLD)
>>
>>This bill is not limited to just cell phone communications. But to ANY
>>communication not intended for general public consumption. So, that
>>could include listening in to the Coast Guard rescue communications,
>>local police and fire, and so on.
>>
>>I know that listening to any Shortwave Frequency that some governmental
>>agency decides is not for general public use would be covered by this
>>bill. Making even scanning through those frequencies a federal crime.
>>Cell phones are a very limited part of what this bill impacts. 73 de
>>(Tomas, NW7US // AAR0JA, ibid.)
>>
>>Next step, you'll have to register your radio down at the local Police
>>department obtaining a permit. And then later you'll only be able to buy
>>
>>radios that cover the FM and Mediumwave broadcast bands, and 'maybe' if
>>you're lucky the International Broadcast bands. Anyone owning a vintage
>>general coverage receiver such as a Hallicrafters, Hammarlund, Icom etc
>>will be "suspect" and possibly open to criminal charges. And, God forbid
>>
>>that you should even think of owning a ``DC to Daylight`` receiver. Of
>>course, criminals will always be able to "buy them on the street", for
>>the right price. Does that sound like any other kind of government
>>control we know of? (Phil, KO6BB Atchley, ibid.)
>>
>>
>>Many other countries do limit what radios their citizens can own and
>>operate. With only a handful of amateurs, most non-democratic countries
>>
>>do keep their licensed amateurs under some scrutiny. In China, unless
>>you are a loyal and ranked 'party member, having even a legal amateur
>>station subjects you to frequent inspections and monitoring. I've been
>>there and seen it... Many of our in-country employees who were amateurs,
>>
>>would come to work to use our own company stations for conversations
>>with their friends in other countries - afraid of being called on the
>>carpet to (McCarthy era like) to explain their actions.
>>
>>Could the US force you to 'register' your radio and limit ownership to
>>only standard broadcast band receivers? Sure. Probably not in the next
>>generation or so, but in the 'brave new world' of the mid 21st century,
>>who knows... 73 (Frank ----, swl)

3312. Gilbert PD / City of Mesa Trunked System update

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2002-07-25 03:11:59 UTC
From: Dan Rollman
Topic: 3309 Message: 3312

Gilbert PD has made the switch from the City of Chandler Trunked Radio System to the new City of Mesa system that is beginning to come online. Frequencies and talkgroups for this new system have been added to the Publication Updates page on the Scannerstuff website.

Southwest Frequency Directory 7th Edition updates are on a password protected website, but are available free to all SWFD-7-AZ owners. If you own a copy of SWFD-7-AZ, then you have the username and password already! Simply go to
http://www.scannerstuff.com/Publication%20Updates.htm
for directions on locating and entering the password for access to the Scannerstuff Publications Updates website.

For information on SWFD-7 and purchasing the new directory for radio hobbyists and public safety radio professionals, please see
http://www.scannerstuff.com/SWFD-7-AZ.htm
Arizona residents are NOT charged sales tax on orders from www.scannerstuff.com

Email danrollman@... with any questions.

From: FLANO
Topic: 3313 Message: 3313

Tucson-Ranger is enroute to Reddington Pass for a possible downed aircraft.

As Ranger-38, he asked Tucson if they were in contact with N923JK. Tucson advised that he was flying VFR, so no radio contact. N923JK is not a currently assigned aircraft registration, according to on-line sources, so I may heard the number incorrectly.

Subject: [ArizonaScanner] NAU Trunked System

Has anyone had the chance to monitor the Trunked System at Northern Arizona University(NAU) in Flagstaff?
I was in Flag the other day and monitored it while on the west side of town.
I picked up what appears to be new channel (talkgroups) on the system.

09936 Heard Baker 40
09712 Dispatch referred to it as Ch 2, also heard Baker 231 running 29 checks. Out at N. 1st Street.

Their was another talk group that I did not write down the talk group and also heard the 1616 talkgroup from NAU Police/Parking.
I did not have another radio with me to check if this was a rebroadcast of the Flag PD channels.
Could barely pick up the system on the East side by the mall. Anyone else have any info?

3317. New Tucson PD division

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2002-07-29 21:22:16 UTC
From: jwcooper141
Topic: 3317 Message: 3317

According to an article in Thursday's Tucson Citizen, TPD has set up a new Operations Division Downtown to patrol the area roughly between 22nd St on the south, 6th St on the north, I10 on the west and Euclid on the East. I haven't heard anything out of the ordinary anywhere yet. Anyone heard what channel(s) they are using? (Sure hope they are not the first users of the new digital system...)

Jim

3318. Re: New Tucson PD division

Subject: [ArizonaScanner] New Tucson PD division

According to an article in Thursday's Tucson Citizen, TPD has set up
a new Operations Division Downtown to patrol the area roughly between
22nd St on the south, 6th St on the north, I10 on the west and Euclid
on the East. I haven't heard anything out of the ordinary anywhere
yet. Anyone heard what channel(s) they are using? (Sure hope they
are not the first users of the new digital system...)

Never heard that one. Easiest way to figure them out is follow them on the map as they say known street nicknames until they say one you don't know (like ice cream), and see where the surveillance parade is probably at. Then start browsing street names in that area.

At this time, the Gilbert talkgroups are analog, so the info is very useful. With Uniden due to release the digital scanners by the end of the year, the information would be useful even if they had switched to a digital system.

APCO-25 Digital? Not sure who mentioned anything about that, but it's not. Gilbert PD is entirely analog on the new Mesa system. Your existing analog Motorola trunktracker will work just fine. And if they do go digital down the road, no problem there either. The BC250d and BC785d digital scanners are due out later this year, and many dealers (including national-electronics.com and usascan.com) are already taking orders for them.

3326. RE: [ArizonaScanner] New Tucson PD division

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2002-07-31 19:16:23 UTC
From: Dan Rollman
Topic: 3317 Message: 3326

Browsing quickly on the map in that area, my guess is Ice Cream is 31st St (as in 31 Flavors / Baskin Robins). That's not a real major street, but it would be pretty easy to use it to refer to other numbered streets that are larger. I.E. if they go South on Craycroft and turn on 29th (a larger street), they could say "we're eastbound, 2 North of Ice Cream".

Never heard that one. Easiest way to figure them out is follow them on the map as they say known street nicknames until they say one you don't know (like ice cream), and see where the surveillance parade is probably at. Then
start browsing street names in that area.

Dan

Subject: Re: [ArizonaScanner] New Tucson PD division

try f-7,f-10 and 155.250. I have heard lots of activity in this area recently. Also, does anyone know which street is nicknamed "ice cream?" I have heard reference to it on the east side of tucson.

Subject: [ArizonaScanner] New Tucson PD division

According to an article in Thursday's Tucson Citizen, TPD has set up a new Operations Division Downtown to patrol the area roughly between 22nd St on the south, 6th St on the north, I10 on the west and Euclid on the East. I haven't heard anything out of the ordinary anywhere yet. Anyone heard what channel(s) they are using? (Sure hope they are not the first users of the new digital system...)

Jim

3327. whar radio do I buy?

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2002-07-31 20:26:29 UTC
From: snakesrking
Topic: 3327 Message: 3327

I need information on the right radio to buy. I would like to monitor the new MESA apco25 system, Gilbert and Maricopa Sheriff. I also need to hear Chandler and Glendale. I heard there is a place that sells used digital radios around here. Does anyone know who that is? Any help would be appreciated, thanks

3328. RE: [ArizonaScanner] whar radio do I buy?

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2002-07-31 20:33:43 UTC
From: Andrew Clark
Topic: 3327 Message: 3328

I'd suggest that you wait until Uniden releases the BC250D, BC785D, an i25d this fall. Besides being significantly less expensive than a used Astro Saber or Astro XTS3000, they will be a lot more effective as scanners.

It's the way radio evolves over time, Dave. Rest assured the same frustrations were expressed in the late 80's and early 90's as trunked systems first became popular and scanner listeners had no way to track them. Then came the TrunkTracker. We all had to buy new scanners, but our hobby evolved into it, and now many people (I for one) prefer trunking over VHF simplex radio systems any day. The hobby is just making the next transition.

A "well designed and properly implemented" digital trunked radio system sounds better than an analog system any day. I've sat with a MCSO dispatcher for a shift, and I can tell you that when and where the system worked as it should, the audio quality is absolutely incredible. Granted the system has its problems (though I'm told they are being worked out), but digital doesn't have to be seen as a "bad" thing, even for scanner listeners. Yeah, we're in the dark right now. But digital scanners are coming, and they will likely be just as worth-the-wait as the original TrunkTrackers were.

Dan

3332. Legal view of mobile scanners

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2002-08-05 20:42:44 UTC
From: d1033
Topic: 3332 Message: 3332

Planning a trip thru AZ, NM, and TX during Sep & Oct and would like to know if a link exist to current legal opines re: scanners in an automobile. To antisapate the question, no I do not hold an HRO ticket.

Thank you in advance
Danny Mclean

Good Quick Reference website for mobile scanner laws is
http://www.afn.org/~afn09444/scanlaws/scanner5.html

Doesn't appear any of those three are "known" to have bans on mobile
scanners.

Dan

Apparently the owner of these pages has some kind of silly security functions on his website to prevent people from sharing links to the content of his website. As such, it is necessary to point your browser first to http://www.afn.org/~afn09444/scanlaws/
and then click the "State Scanner Laws" link on the left.

Most browsers pop up a message that tells you just that, if you try to access the link I original gave in my previous message. But at least one person didn't get that pop-up message in their particular browser, and therefore did not know how to access the scanner laws page I described.

Dan

3335. New Tempe talkgroups; New Pinal County SO Repeater Frequency

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2002-08-07 02:12:47 UTC
From: Dan Rollman
Topic: 3309 Message: 3335

The City of Tempe has added additional Parks and Events talkgroups to their trunking system, and Tempe Schools has also joined the system with 12 very active talkgroups. In addition, Pinal County Sheriff has added a new Channel 5 repeater frequency. Frequencies and talkgroups for these and other changes have been added to the Publication Updates page on the Scannerstuff website.

Southwest Frequency Directory 7th Edition updates are on a password protected website, but are available free to all SWFD-7-AZ owners. If you own a copy of SWFD-7-AZ, then you have the username and password already! Simply go to
http://www.scannerstuff.com/Publication%20Updates.htm
for directions on locating and entering the password for access to the Scannerstuff Publications Updates website.

For information on SWFD-7 and purchasing the new directory for radio hobbyists and public safety radio professionals, please see http://www.scannerstuff.com/SWFD-7-AZ.htm Arizona residents are NOT charged sales tax on orders from www.scannerstuff.com

Email danrollman@... with any questions.

3337. TPD changes

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2002-08-12 18:33:46 UTC
From: kd7eir
Topic: 3337 Message: 3337

TPD has created a new team.
It is team 5, and it covers the central downtown area.

They have taken the F5 155.8500 crosstalk frequency and
assigned it to this new team.

Most units are using F7 154.1150 (the digital MOU channel) for
crosstalk. Of course they are using it in analog mode.

Jim, kd7eir

From my understanding that "AMT" has nothing to do with the old Arizona Medical Transport once ran by Rural Metro.

It□s a newer company doing some inter-facilities.
I've seen the unit you are talking about and am doing what I can to get some more info it ... nice paint job none the less ... it's about time someone thought outside the box as far paint on ambos goes!

Subject: [ArizonaScanner] NAU Trunked System

Has anyone had the chance to monitor the Trunked System at Northern Arizona University(NAU) in Flagstaff?
I was in Flag the other day and monitored it while on the west side of town.
I picked up what appears to be new channel (talkgroups) on the system.

09936 Heard Baker 40
09712 Dispatch referred to it as Ch 2, also heard Baker 231 running 29 checks. Out at N. 1st Street.

Their was another talk group that I did not write down the talk group and also heard the 1616 talkgroup from NAU Police/Parking.
I did not have another radio with me to check if this was a rebroadcast of the Flag PD channels.
Could barely pick up the system on the East side by the mall. Anyone else have any info?

What a great meeting we had tonight!

It seemed to just get better and better as the night went on.
We had 8 or 9 persons in attendance. The group got together at 5PM and
was still going strong out in the parking lot of Coco;s at 8:45PM!

While next month's meeting is probably going to be a Coco's on Campbell
again,
Armand is going to look into finding a nice quiet Pizza joint in the East or
Central part of town for some other meetings.

Thanks all.

It is actually the TCC (Community Center) as you originally suspected Scott, per the SWFD (www.scannerstuff.com). I've confirmed this by listening and via representatives of the city. Any reference to Communications Center in older outdated lists some might have would only be because the GS (General Services) dispatch console at City Comm can transmit on it to communicate with Community Center personnel downtown.

3352. RE: AMT Ambulance-Arizona Flag Paintjob

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2002-08-19 10:18:19 UTC
From: Brian Bowling
Topic: 3344 Message: 3352

Hi Group,
No word on what Freqs. the new AMT is using, but I did see that snazzy ambulance parked at the Kyoto Bowl adjacent to Ham Radio Outlet last Wednesday. I
managed to catch the attendants on their way back to the rig and they confirmed that they are a new, independent inter-facility transport service (like PMT) and are
not a Bob Ramsey incarnation. They were ALS though, the gentleman I talked with was a paramedic, not sure about the driver. He hinted something about the futility
of the CON and Ramsey's venture and doubted its success. Nevertheless it will be interesting to see if some competition for emergency transport emerges it the
coming months.

I have some digi pics I grabbed of the ambo and they are located at the URLs below:

They are about 30k each so be prepared for a 640x480 JPEG...

Simply copy the URL into your address bar since this group is text email only.

Well, here is my two cents about this.

A few months ago, a couple of people I know that work for Southwest told me that AMT was comming back into existence.

If you remember, Rural Metro bought AMT from Baptist Health Systems and still holds the CON. AMT is owned by Rural and is an inter-facility provider at this time. It was started by RM to help ward off Ramsey's attempt to get a CON for his new company, Life Star.

At this time, there are no plans to make AMT a first responder but tie will tell about that.

I'll try to find out from my friend what frequencies they use. It was my friend's speculation that they would be on the new unassigned SW channels because the use of those was very hush hush.

I heard back from my friend at Southwest.

AMT is using their Inter-Facility channels 13 and 16 depending if they are Eastside or Westside units. They currently have 5 rigs. Some cars are ALS when they get them staffed as such but for the most part they are BLS bone cars. He wasn't sure of their call signs because he's been working in Pinal County for a couple of weeks.

Let me know if you want to know more.

From: Bryan Goldtooth
Topic: 3308 Message: 3355

I had a chance to listen to the NAU System today and it was busy with students still moving in. Here is what I snagged today.

1616 NAU Operations/Police/Parking
1712 ???
3216 ??? Dispatch? asking if unit was Code4. Unit answered "Code4"
9936 Flagstaff Police Ch 1 Dispatch
9712 Flagstaff Police Ch 2 Tac/Info
6448 Maintenance
6480 Maintenance
6544 NAU General Services
6608 NAU General Services
9904 ???

This is correct and up to date. Very busy today. Only had time to monitor it for less than 2 hrs today and this is what I came up with.
Also, heard Flag PD using a 800Mhz freqs. I think they where I-calls?? Anyone have a chance to monitor this system?

Well I was in Flagstaff today for the Hamfest and now can confirm that talkgroup 09936 is Flag PD Ch 1 or could also be called a rebroadcast of 156.210.
also heard 09712 and 01712.

Subject: [ArizonaScanner] NAU Trunked System

Has anyone had the chance to monitor the Trunked System at Northern Arizona University(NAU) in Flagstaff?
I was in Flag the other day and monitored it while on the west side of town.
I picked up what appears to be new channel (talkgroups) on the system.

09936 Heard Baker 40
09712 Dispatch referred to it as Ch 2, also heard Baker 231 running 29 checks. Out at N. 1st Street.

Their was another talk group that I did not write down the talk group and also heard the 1616 talkgroup from NAU Police/Parking.
I did not have another radio with me to check if this was a rebroadcast of the Flag PD channels.
Could barely pick up the system on the East side by the mall. Anyone else have any info?

Bryan Goldtooth, KD7CKQ

3356. NAU Trunked System

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2002-08-20 15:20:23 UTC
From: Bryan Goldtooth
Topic: 3308 Message: 3356

I had a chance to listen to the NAU System today and it was busy with students still moving in. Here is what I snagged today.

1616 NAU Operations/Police/Parking
1712 ???
3216 ??? Dispatch? asking if unit was Code4. Unit answered "Code4"
9936 Flagstaff Police Ch 1 Dispatch
9712 Flagstaff Police Ch 2 Tac/Info
6448 Maintenance
6480 Maintenance
6544 NAU General Services
6608 NAU General Services
9904 ???

This is correct and up to date. Very busy today. Only had time to monitor it for less than 2 hrs today and this is what I came up with.
Also, heard Flag PD using a 800Mhz freqs. I think they where I-calls?? Anyone have a chance to monitor this system?

Does anyone know the tac freq's these flites use around the airspace just outside the base during training or whatever those flites are around the western deserts? I hear them sometimes on the Control tower frequency. I also see groups of Jolly Greens in formation out there too. Any help with what frequencies I should monitor. My starting point location for monitoring from is 163rd and Grand Ave about 5 miles north of the intersection there CAP mile post 139
Thanks Dave

anybody successfully trunking Chandler on the Pro-92? I believe I
have everything correctly entered for both type I and type II motorola
systems(in different banks) but neither yields much traffic at all.
Is there a problem with the radio or with the programming?

thanks

Where are you located? That system is in Chandler no mountain top repeater sites and it's low power very difficult to monitor, you need a strong signal to get the Trunktracker to track it. I used to try an monitor Gilbert PD on it in Gilbert and even the police handhelds would be receiving the system weak . Make sure you have a control channel (the data ch) check to see you have all the right frequencies in there too. Also you may need an outside antenna depending on your location in relation to the city
Good luck
Dave

Do I need to do anything special/different with the control channels since they are part of the list of frequencies listed for Chandler in SWFD. They also point out repeater channels that have a mode type PL. How do I use these channels.

Pl's are used for regular repeaters trunked systems do not use PL
tones so those are most likelt tac ch's or failsoft when the Trunked
part of the system go's down.
about the data or control channel see if you can receive it solid
really clean then you should be able to track the system providing
you have all right frequencies
let us know how you do
Dave

On the control channel I get squealing, beeps, and hisses. Display
reads "MOT: CNTL". Should I expect a lot of traffic on this TRS.

Topic: 3332 Message: 3365

Sorry for the late reply...

I'm a 48 state trucker and have never had a problem involving mobile scanners in any of those states you propose to travel through. The subject never has come up during safety inspections or at weigh stations. And I'm not famillar with any restrictions on the books.

Mark-kd7lqw

Try 434.000. This is an output of a repeater (421.250 is an input).

Can someone update me on Gila Cty SO frequencies? I know they have two dispatch locations - Globe, and Mt Ord. Do they still have a North and South dispatch frequency? How about PL's? Same for both or do they use different PL's to access different repeaters? I don't believe the info in my past version of the S/W freq directory is correct

3369. RE: [ArizonaScanner] Gila County

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2002-08-24 16:45:09 UTC
From: Dan Rollman
Topic: 3368 Message: 3369

Yes, they still have North and South, but "South" is for most of the county, and North is a Payson area repeater that is basically only used where the main 155.310 (South) repeater is not working. I don't have a copy of SWFD-7 with me right now, but I do know the Gila County SO frequencies are updated in the new 7th edition (http://www.scannerstuff.com/SWFD-7-AZ.htm) and all the repeater entries, as well as a simplex alternate channel, all now include PL Tones / DPLs in the new edition.

3370. A request

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2002-08-24 18:27:06 UTC
From: d1033
Topic: 3370 Message: 3370

Would anyone know if there is a scanner site similar to this group for New Mexico. I will be traveling through there via I-40 in a couple of weeks and would like to monitor Hwy Ptrl and Cnty SO's. I already have the railroad freq's for road & detectors.

Thanking you in advance
Danny Mclean

3371. RE: [ArizonaScanner] A request

Hey Danny,

I've looked for one in the past, and I don't think one exists... at least not on Yahoo!Groups anyway. If anyone else knows of a New Mexico scanner email list let us all know here on ArizonaScanner!

Thanks,
Dan

From: Dan Rollman
Topic: 3372 Message: 3372

Can any scanner listeners in the East Valley comment on how well communications are working for Gilbert PD on the new Mesa system? There certainly were (at least handheld-based) holes in their coverage on the Chandler system... are you now hearing Gilbert PD better or worse, and where at?

Dan

Saw GFD EP's 150 and 151 going on a call this afternoon, along with a GFD Crown Vic. Followed them down to an apartment complex on 57th Ave. south of Missouri Ave. where EP and L152 were already at. BC151 was also there. (Probably food on the stove or something, no smoke or flames, and most of the crews were in the parking lot.)

BC151 is now using an F250 SuperDuty crewcab pickup with a camper shell. Also has one of those LED lightbars, but it wasn't lit up, unfortunately. Don't know what happened to their most recent 90's Chevy Suburban. I haven't seen their older 80's Chevy Suburban around for some time now.

I would assume that the Crown Vic is a Safety Officer? Can anyone fill in the id on it? Fully marked, standard light bar, etc.

Thanks.

From: jhguetherman
Topic: 3370 Message: 3375

I had looked for one as well. I believe there is an Albuquerque-area Ham Radio group on Yahoo, but no scanner group.

I have found, however, that the Albuquerque/Bernalillo County trunked system is digital, so you're out of luck there.

As far as NMSP goes, what I have from the 2nd Edition of "Monitor America" shows:

Ch. 1: 155.475 National Interagency
Ch. 2: 155.550 State Law Enforcement Net. Local PD and County SO to NMSP. (155.370 input.)
Ch. 3: 155.160 SAR; possibly some District use.
Ch. 4: 154.920 Command; Emergencies; Statewide Car to Car; Paging.
Ch. 5: 155.565 (Base) 155.655 (Mobile) Districts 1, 3, 12, 13, Sub-District 9.
Ch. 6: 155.580 (Base) 155.685 (Mobile) Districts 2, 10, 11, and Sub-District 3.
Ch. 7: 155.520 (Base) 155.535 (Mobile) Districts 4, 5, and 9.
Ch. 8: 155.790 (Base) 155.730 (Mobile) Districts 6, 7, 8 and Sub-District 7.
Ch. 9: 154.310 Statewide Fire Mutual-Aid
Ch. 10: 155.700 Link to State Corrections

Channels 5 to 8 apparently are/were in the split-simplex mode. Meaning they weren't repeated. You'll need to program both frequencies into your scanner. Channels 8 and 7, in that order, will cover I-40. Channel 8 in McKinely and most of Cibola counties, (District 6), and channel 7 in the eastern part of Cibola, and all of Bernalillo and Torrance counties (District 5). District 9 covers the rest of I-40 through Guadalupe and Quay counties, on channel 7 as well.

I-40 comes very close to both Valencia County (District 11) and San Miguel County (mostly District 2, except the southwest corner in D-5), both are on channel 6. It may be worth monitoring. The southern part of Santa Fe county, which I-40 appears to just barely touch, is in District 5.

Other channels:

154.905 and 155.430 New Mexico Mounted Patrol (NMSP Auxillary unit)
460.150-465.150 Mobile Extenders
154.875 Intercity Law Enforcement Net Northwest (158.730 input.)
(154.800 Southwest and 154.875 Southeast, repeaters.)

I have no clue as to the current accuracy of any of this. Hope it helps though.

One other channel that may be interesting is 462.675. This is a GMRS (General Mobile Radio Service) channel. There is a repeater on this channel on a mountain top, Sandia Crest, east of Albuquerque which should have some amazing coverage due to it's 10,678' altitude. It's owned by a REACT Team there, so you may be able to monitor traveler assistance and emergency calls on it.

All of Albuquerque city and Bernalillo county is digital trunked, from what I've been able to determine. I don't know anything about the other cities.

3381. Glendale, CA Police Department missing radios

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2002-09-04 22:20:00 UTC
From: lcinaz65
Topic: 3381 Message: 3381

FYI, from another group:

The Glendale Police Department is seeking information regarding the loss of four XTS3000R portable radios in the City of Westminster. The loss occurred on Tuesday, August 20, 2002 at 11:00 AM.

The radios are UHF (450-512 MHz), programmed with the frequencies of every UHF Police agency in Los Angeles County, are equipped with SmartZone trunking, and three are encrypted. The radios are new, were in Motorola boxes, and did not have batteries. All four radios have a Glendale Police Department decal on the front of the case in place of the Motorola nameplate, and a City property tag affixed to the rear.

If you have information which may assist in the recovery of these radios, please call the Glendale Police Department at (818) 548-4989, or you may remain anonymous by calling Glendale Crime Stoppers at (818) 507-7867. Persons providing information resulting in recovery of this property may be eligible for a reward of up to $1000.

We would appreciate your help in passing along this information to radio shops, amateur radio clubs, scanner clubs, and others who might possibly come across any information regarding these radios.

The serial numbers of the lost radios are as follows.

326ABY0631
326ABY0627
326ABY0318
326ABY0305

3382. APCO 25

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2002-09-05 17:36:32 UTC
From: foresigt
Topic: 3382 Message: 3382

Does anybody know what cities and agencies here in the valley are going to use the APCO-25? I know that Phoenix is but it seems all quite about the outlying areas. Is DPS and if so, statewide?

I haven't seen anyone mention it here but I was talking to a tech for one of the radio manufaturers yesterday and told me that they are still having trouble with the battery life on APCO-25 radios. Seems the chip sets they use chew up a battery in less than 3 hours. Anybody that can confirm or deny this?

Also, I was told that the Dept. of the Interior, BLM, Forest Service and such have been mandated to go to APCO-25 standards on VHF by 2005. I wonder what the range on a digial VFH radio will be compared to analog FM?

3383. RE: [ArizonaScanner] APCO 25

Yahoo group: ArizonaScanner (1999 — 2002)

Topic: 3382 Message: 3383

MCSO is on an APCO-25 System. Scottsdale, Surprise, Youngtown, and Sun City are all on the same system, although in analog. You can expect them to go digital eventually. Glendale is supposed to be switching to a Digital system, and it's a pretty good bet that Peoria will be on the Phoenix system.

My XTS3000 battery lasts about 26 hours if I'm just listening, or about 12 if I'm talking and listening.

MCSO and all the cities listed are in fact digital but they are not APCO 25 digital. There is a significant difference in the technical operations. The city of Tempe has no plans in the immediate future to switch to APCO 25 We are at least 6 years away.

From: Chuck Kimball
Topic: 3382 Message: 3385

In regards to the federal agency mandate.

All Federal Agencies have to be narrow band by 2005.
Forest service is just planning on going narrow band Analog. Several states are already complete.

Department of Interior has mandated that all it's agencies (Park Service, BLM, Bur Rec, etc), must be APCO 25 Digital by January 2005.

Some departments - such as the National Park Service have also mandated that all law enforcement communications will be Apco 25 Digital & Encrypted.

As far as range, the reports from the field is that the digital is actually working further than they usually get with analog radios, but it doesn't appear to any great difference.

Hope this helps. Keep in mind the dates have already changed a couple of times, and so far there has not been any money come down to complete the change over, so a lot of agencies are way behind. Things are probably going to change again.

Chuck

3386. RE: [ArizonaScanner] APCO 25

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2002-09-06 01:01:04 UTC
From: Dan Rollman
Topic: 3382 Message: 3386

Mike,

Can you confirm for us your statement regarding MCSO not being APCO-25? Are you saying the County system is VSLEP (a non APCO-25 format) rather than IMBE/CAI (which as you know is an APCO-25 compliant protocol)?

Thanks,
Dan

Mike is right, the Maricopa County system is using Astro Digital CAI (which refers to the type of digital modulation only) but that is only one of 6 interfaces defined under apco 25 standards. The county system is actually apco 16 compliant since it uses a 3600 control channel and apco 25 systems use a 9600 control channel. The other interfaces refer to data ports, computer protocols, network management, etc. and make up the remainder of the apco 25 specification. For scanner listeners to hear both types the scanner will need to be compatable with both control channel speeds. Hope this helps clear it up a little for everyone.

3388. RE: [ArizonaScanner] Re: APCO 25

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2002-09-06 18:44:50 UTC
From: Dan Rollman
Topic: 3382 Message: 3388

Certainly does clear it up, thanks! Andy said the system was APCO-25, meaning the digital modulation was CAI (which is an APCO-25 compatible modulation form), and Mike, in saying the system is not APCO-25, was referring to the APCO specs regarding control channel speed (3600 baud speed is not APCO-25, 9.6kb is). Both of them are right, according to your email. They were just referring to two different things (control channel, vs. the digital modulation).

Generally, when scanner listeners refer to an "APCO-25" system, they are concerned exclusively with the digital modulation scheme, not the control channel speed. Reason is, existing TrunkTrackers already do 3600 baud control channels, and the upcoming APCO-25 TrunkTracker scanners will do both 3600 and 9600. But importantly, existing scanners are analog only. The coming digital scanners will permit monitoring of APCO-25 digital modulation formats (like CAI), through either a 3600 baud or 9600 baud control channel.

So, to sum it up, the new scanners should in fact work with the MCSO digital talkgroups (with the exception of encrypted operations), because it will decode the APCO-25 digital modulation, and can do so on either older 3600 baud control channels (APCO-16, as you say) or newer 9600 baud control channels (APCO-25).

The county's control channels are not APCO-25 per say, because they are slower than required. But that's ok. The scanner can deal with NON-APCO-25 control channels (like 3600 baud), just not NON-APCO-25 digital modulation schemes.

The reason scanner listeners would be interested in this distinction is simple: If the digital modulation is VSLEP (or some other non APCO-25 digital modulation format), then the new scanner won't work with it! This is the case in Cleveland, Memphis, and a couple other cities.

When Mike said the system was not APCO-25 compliant, he meant the issues of the control channel, etc., not the digital modulation. When Andy said it was APCO-25 compliant, he meant the digital modulation, because as a scanner listener he knows that whether the control channel is APCO-25 compliant makes no difference, since the new scanner will be fine with control channels that are or aren't APCO-25. It's the digital modulation that makes a difference, and we're fine knowing it is CAI, thank goodness.

Thanks for helping us realize one person was saying one thing and it caught our ears because the other was hearing something different!

Dan

3389. APCO-25

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2002-09-06 20:13:30 UTC
From: foresigt
Topic: 3389 Message: 3389

Thanks guys! This group is always a wealth of information.

One thought come to mind though. Does this meant that MCSO's system will not be compatible and be able to talk to the other local's APCO-25 system?

Could it be that this idea of everyone being able to talk to everyone else is just a big fantasy?

3390. RE: APCO

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2002-09-06 20:14:27 UTC
From: Carl Reitz
Topic: 3390 Message: 3390

To Andy & Dan (et al),

Regarding the Maricopa County SmartZone system (the one which MCSO is just one of many different agencies utilizing that network), it is NOT APCO-25 compliant. Maricopa County's system uses a 4800 baud rate on the control channel data. Control channels on an APCO-25 system uses a 9600 Baud rate. The county's system is APCO-16 compliant. It is mixed-mode (analog & digital) with digital being IMBE.

Apparently the recently authorized APCO-25 radios that went on to that system do function, think of it as the higher speed modem (in the APCO-25 radio) can adjust to the slower speed of the APCO-16 system.

Hope this clears up any confusion.

3391. RE: [ArizonaScanner] RE: APCO

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2002-09-06 21:44:49 UTC
From: Dan Rollman
Topic: 3390 Message: 3391

Carl,

You are correct, and again we are all saying the same things differently. :) IMBE is the same as CAI (Common Air Interface) that I referred to in my last email. See my last email regarding the difference between an APCO-25 control channel (it is not) and an APCO-25 digital modulation scheme (IMBE/CAI is).

Since current scanners do the equivalent of APCO-16 (slower baud) data channels, and the new scanners will do both slower and faster data channels (APCO-16 and APCO-25), as well as all APCO-25 compliant digital schemes (including IMBE/CAI), the new digital scanners should work just peachy to monitor the digital talkgroups on the system.

By the way, since we are on the topic, if anyone is wondering why the County system doesn't use a 9600 baud control channel, keep this in mind: Motorola systems with 9600 baud control channels can be DIGITAL ONLY. There is NO backwards compatibility for analog-only talkgroups and radio. If you change to a 9600 baud data stream, you loose the ability to let some agencies (like non-public safety agencies who don't want to spend the big bucks, Red Cross, Jails, etc.) stay analog on your trunked system. Everybody has to be digital. If you stick with the slower data streams on the control channel, you can mix both analog and digital talkgroups on the system (as is currently done on the County system).

Oh Carl, by the way... might want to check again regarding a 4800 baud control channel. I've never heard of such a thing in Motorola trunking. The older ones are 3600, the newer (APCO-25 compliant) are 9600.

And lastly, if anyone would like to read a pretty good primer on the very basics of digital, go to http://www.trunkedradio.net and click on "APCO-25/Digital" under System Info on the left.

Dan

3392. RE: [ArizonaScanner] APCO-25

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2002-09-06 22:03:51 UTC
From: Dan Rollman
Topic: 3389 Message: 3392

Uh, it may be a big fantasy (all over the country we've seen tens of millions spent by large cities and counties for "interoperability" dreams that never come true) but it won't be because of the different control channel speeds. The reason is backwards compatibility. A newer radio with APCO-25 digital capabilities (like the XTS3000 and such that is common on the county system), can still operate on analog talkgroups, and (obviously) both 9600 baud and 3600 baud data channels, as I understand it.

Now when Phoenix gets their agencies moved over to their new wiz-bang super-duper-mega-supreme digital trunking system, it may use a super-duper 9600 baud control channel. As my last email described, this would mean only digital talkgroups can exist on the system. If they go that route, the new wiz-bang Phoenix radios will be able to go backwards to old technology and still communicate with, say, Tempe on their older, 3600 baud analog system. But a Tempe user with an analog-only, 3600 baud control channel-only radio won't be able to talk to Phoenix on the new wiz bang Phoenix system. If Phoenix implements their system to be technically similar to the County system we've been talking about (older 3600 baud control channel, but both digital and analog talkgroups on board), then older analog-only, 3600-baud only radios would still be able to access the Phoenix system. But of course only on an analog talkgroup!

So as you can see, hearing a politician say "vote for the bond so we can go to 800 Mhz and then we'll be able to talk to everyone else on the band!" is not nearly as simple as it sounds. But what is, right? :)

Dan

DPS will NOT be going APCO 25 for the forseeable future.
Our detective units are using GE/Ericsson/ComNet/MA-COM's proprietary
encrypted, digitized voice, AEGIS VGE.

There are claims on both sides of the distance issue. Digital voice is
either
real good, or not there at all. Conventional FM has a progressive
degradation,
and an officer hearing the poor signal just naturally moves around until
the
signal improves. With a digital system it's a lot more hit and miss.

And , Yes, any and all Fed agencies are moving quickly to P25 radio
systems.
Even their body bugs have to move to narrow band modulation, usually
digital.

Yeah, the southeast portion of Glendale got hit hard by a possible microburst late this afternoon. From 43rd to 51st Ave's. and Glendale to Camelback Rd's.

I was in downtown Glendale between 1 and 3pm. Saw GFD's BC151 Suburban driving around. Is GFD running two BC's now? Or do they have two seperate vehicles, the Suburban and the F250 SuperDuty? Both were fully marked, antenna's, lightbars, etc.

Apapche Junction also got hit hard. A 250KV power pole went down, leaving lines across a shoolyard there. They got the kids out fine after de-energizing the lines. Does AJFD have a large Command Van? Saw what looked like one in one of the news helo video videos. Appeared to be longer than one of the engine companies on scene.

Ok, now with all of the recent comments, it seems that I remember reading an article quoting Chief Hurt (Phx PD) that they wouldn't go digital until a later time because they get lots of information from scanner users.

If that is the fact, how can the system be APCO-25 if it only does digital? More mis-information to the future users?

That may have been a very premature statement by Chief Hurt a while back.
All indications now are the Phoenix system will be 100% digital.

Dan

Unless Chandler has changed in the last couple of months, they've got a great radio system. I have done two ridealongs in the last year with them and I never noticed a hitch in it. David, maybe when you go riding, you can verify this...but there was nothing to lead me to believe that their radio system has any problems.

Dave. how does one schedule a ride-along with the Chandler PD or any PD for that matter. I heard some talk about it at one of the beat meetings and would like to know more.

I am scheduled for a ride-along with Chandler PD on Sunday. I'll ask the officers how they like the radio system and post the feedback here.

3404. pd ridealongs

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2002-09-07 07:31:52 UTC
From: Benjamin R Russell
Topic: 3404 Message: 3404

Chuck:
Scheduling ridealongs are done different ways with different agencies.
I'll explain procedure for the agencies I have been out with:

AZ Highway Patrol:
Go down to one of the stations and fill out a waiver/application and sign it in the presence of a DPS employee or notary. They'll do a background check and contact you usually in one or two months. You will need to call them about a month after you have turned in your app. (if no contact yet) to check on the status. If you don't hear back from them within another couple weeks, call them back. You will enjoy your ride with this agency.

Chandler PD:
Go down to the station at Chicago and Arizona Ave. and fill out a waiver/application. They'll usually call you back within a couple weeks after your background check to schedule a ridealong.

Maricopa County SO:
Call the substation closest to you. If you call the Southeast substation you'll want to talk to JB...she'll set you up. I'm not sure with the other substations but JB @ Southeast can usually get you scheduled within a week. When you arrive at the station for your ride, you'll need to sign a waiver.

3405. Scanner Frequncies

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2002-09-07 10:25:19 UTC
From: d_stain
Topic: 3405 Message: 3405

I the pro93 software to program my scanner. The reason I'm saying this is I had to format my hard drive on my computer and lost all of my frequancies. I was hoping there was someone out there that can hook me up with some good frequncies or someone that uses the same software that can send me frequancies... Any help would be great...

Thanks
Kevin

Benjamin,

You're right. I think Dave may have got confused and thought we were talking about Chandler, not Gilbert. Yes, Chandler has a great system, and everyone I know there loves it. But Gilbert didn't like being on the Chandler system so much, because it doesn't cover Gilbert as well as it covers Chandler.

So, the real question was, how does GILBERT like their new system (the Mesa system). Dave/N7DJR says Gilbert likes being on the Mesa system better.

Dan

Dan,

I don't know where I came up with that 4800 baud rate, but you are correct on the 3600 rate (I must have had one of those "senior moments" I heard others talk about......or may be caused by too much exposure to RF...hi, hi). Never the less, this discussion has been good for the group and should help to clear up confusion.

Last I heard, Peoria PD only required a 3-4 day lead to do the background check after you fill out the waiver form. You could ride up to 3 times in a calender year.

That was 14 years ago, however. It may have changed.

I was talking about the Gilbert system, that the question right?
Sorry for the confusion. I spoke with a Gilbert PD officer about the
new system they are using and asked question like can you hear your
calls any better and has you noticed any better range with your HT
the answer to both questions....Yes
Dave

3410. Chandler RideAlong Report

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2002-09-10 05:33:26 UTC
From: David French, N7FAN
Topic: 3410 Message: 3410

I had a very interesting ride yesterday with Chandler PD. I found that the radio system covers the whole city with clear coverage...except for the 54th & Ray area..by the I10. It gets a little scratchy out there. Also, there is a complete dead spot at Elliot and Loop 101. Neither the radio nor the MDS unit worked in that intersection. 200 feet east or south and it worked fine.

Chandler runs on five channels normally. They have a Patrol A and B (A is west side). The dividing line is around Alma School Rd. They have Info A/B and they have a HOT channel. I also heard mention of a TRAFFIC channel, but I never got to hear that one.

The officer I rode with liked the radio system and said that he had experienced UHF with the sheriff's office and this was 1000% better (extra 0 intentional).

They are broken into 5 shifts. Days, Swing, Graveyard & two supplimental coverage shifts.

Chandler numbers their units as follows (Unit numbers given as examples):

1P1 = Patrol Officer, first shift, Beat area 1
2P2 = Patrol Officer, second shift, beat 2
4X1 = Extra unit, 4th Shift (Afternoon coverage), Beat 1-2 Overlap.
4X2 = Extra Unit, 4th Shift, Beat 3-4 Overlap.
5X3 = Extra Unit, 6th Shift (Swing/Graveyard coverage) Beat 5-6 Overlap.
(etc.)
Z## = Unit at Chandler Fashion Center (Cruiser & Bicycle Patrol)
L# = Leutenants
S## = Sargeants
T### =Traffic Units (Motor Officers...sometimes in cruisers on weekends)
I## = ID Techs
V### = Volunteers (Motorist Assist Personnel)
CARE# = Victim Assistance Unit.

It was a very enjoyable experience (except waiting for them to come out of briefing and collect me from the PD front lobby) and I will be doing it again soon.

My next conquest is a Dispatch Observation with CPD on Friday night (the 13th). I'll let you know what I learn.

David in Chandler

From: Ric Marshall
Topic: 3413 Message: 3413

Durham Communications, Mesa, Ariz., has won a contract to upgrade to the Los Angeles Fire Department's aging dispatch systems.
The $1.1 million project, which began four weeks ago, is slated for completion during the first quarter of 2003.

The Los Angeles upgrade includes an OrbaNET T-5 communications control dispatch console system with 15 dispatch positions and a ComLog digital voice logging recorder from by Montreal-based CVDS. The T-5 system is digital, which makes it reliable and scalable to handle radio, telephone and network resources, a statement from the company reads. The ComLog recorder is a PC-to-DVD-based digital recording system for telephone and radio lines.

"We were chosen to do this installation partially because of the extraordinary skill level required to seamlessly integrate the new equipment with existing systems. We demonstrate a willingness to be flexible and responsive, and to provide exactly what the customer requires," said John Durham, the company's president.

Among its Arizona customers, Durham Communications numbers the city governments of Peoria and Tempe, and the Phoenix Fire Department.

Ric,

Thanks for forwarding that!
Also, I'm not trying to doubt your writing skills or anything, but that just doesn't really look like something a scanner wrote up for an email list.
Maybe it's me. Would you mind properly citing where it came from for us?

Thanks!

Dan

From: John H. Guetherman
Topic: 3416 Message: 3416

This is the Montgomery County, PA. Emergency Dispatch Services 9-1-1 website. It should serve as an example to other agencies on how to make themselves and their radio systems public knowledge.

http://www.montcopa.org/eoc/EDS/

It includes frequency and TrunkTracker information, information on the radios used (XTS-5000 handhelds, and Astro Spectra mobiles), a list of all the law enforcement agencies, fire departments, and EMS providers in the county, etc.

It does not include a link for monitoring the system via the internet yet.

I was born and raised 14 years in Abington Township, Montgomery County. I'd like to see similar websites for agencies here in the Valley, and around the state.

Does anyone have a list of all the N registration numbers for the various law enforcement, medical and media helo's in the Valley? The few I have are (corrections welcomed):

N613TV - NewsChopper3

N955TV - NewsHawk5

N974AE - Air Evac (?#)

N503MP - Mesa PD Falcon 3

N504MP - Mesa PD Falcon 4

N524FB - Firebird 4(?)

N224LF - NativeAir 1

N206MH - NativeAir 2

N4075I (?) - NativeAir5

John H. Guetherman
Peoria, AZ.

Gentlemen, his is a useful listing. It would be great if a knowledgeable person (one or all of you????) could now take this combined list of Tail #'s and combine them with a frequency list of there company or station frequencies + the AM Air or FM operation they usually use while in flight, at the scene, chopper to chopper frequencies, etc.!

Just a passing thought that would be very helpful at the time you need it.
Thanks,
August

From: Tracy
Topic: 3419 Message: 3424

You might like to check out my FAA tail number database. It allows searches not only by tail number but but city also, so if you know what city your aircraft is registered in you can find the rest of their aircraft using this database.

To find the frequencies for helicopters in the Phoenix metro area you might check with your local pilot shop for a helicopter sectional. I have one for the LA Area and it listed all the frequencies for the different public safety copters as well as the frequencies used at the various helipads in the area.

The common air-to-air frequency should be 123.025 (that's a nationwide frequency).

Running a search by city for aircraft numbers will not necessarily work ... Especially in the cases of medical helicopters. All of the medical helicopters are "vended" to the agencies from helicopter vendors out of state. So.... if youlook up an AirEvac helicopter you should see it coming back to Petroleum Helicopters out of Texas. Lifenet would be a part of Rocky Mountain (which was actually just bought out by Air Methods) and Native's come from Omniflight in Addison Texas. The databases typically track the owners location and not the area that the aircraft is assigned to.

Mike

I think there are a few regulars that either have one or at least have had one of the Radio Shack beasts. Worst case is we will figure something out. :)

Come on out on the 28th. And any other scanner heads out there are welcome to come out as well.

Hi All,
This past thursday while tuning around looking for any spikes on the SDU, I located a freq that was previously unknown to me. It must have been a range freq since the pilot was angry and asking the controller why they scheduled another flight in the space at the same time. Anyway, the frequency was 264.13 or perhaps 264.135. Anyone else ever monitored this channel before and have any info on it??
TIA

I don't think it is possible to listen to districts 4 and 9 in the valley. If you hear traffic on those frequencies, you're probably hearing districts 5 (Metro Central) and 13 (Metro East).

4, absolutely. 9, probably not.
Depends on your radio and antenna set-up. I can hear District 4 quite well on my mobile radio (roof mounted antenna) while driving around central phoenix, and especially well in the west valley.

If you're not good just with the sound difference between D4 and Metro East's signal quality, you can tell because D4 units will be 4##, and will be calling "Tucson" as the dispatcher.

Depends where you are. I hear D9 at the Broadway curve.
But, they get covered by Metro Central.
A yagi pointed at the main site for a district would help.
D9 would be Heliograph. D4 doesn' t really have 1 site.

Where are you?

From: Dan Rollman
Topic: 3447 Message: 3448

No, Pima County Sheriff is not digital. They are analog, just on a very rare breed of system. The new scanner does not add functions to track additional vendors proprietary systems. Rather, it will decode the APCO-25 digital signals on systems that can already be tracked (Motorola, etc.) by current TrunkTracker scanners (i.e. Maricopa County), as well as to decode non-trunked APCO-25 digital signals (i.e. LAPD, and perhaps Tucson PD).

For Tucson listeners, it may be interesting to know if the unencrypted digital communications currently on Tucson PD Ch7-Ch10 are in fact APCO-25 type (as has been implied), and if so, will one be able to hear those communications using the new scanner (i.e. will TPD then begin also using encryption in addition to the digital format or not).

Nearest transmitter is Childs Mountain in Ajo.
Next nearest is Oatman Mtn., west of Gila Bend.
Neither one is a primary station.

Now I understand why you can't hear D4.

When I was in the newsroom of KGUN-9 some time ago they had a trunked radio that PCSO sold them and set it up with the talkgroups that they were willing to have a television station able to monitor. Not sure if any of hte other stations down there went for the same deal, but I do know that the radio was much more expensive than a scanner costs.

Not a bad investment for a television station, but us average hobby listeners might not like the price. :)

At least one of the news stations I know of paid a few thousand bucks and bought themselves an actual radio, just like PCSO deputies carry, and had PCSO program it for them with transmit disabled. Not a scanner at all. When you're a news station with a few thousand dollars to spend (on the radio, and the manpower necessary to convince an agency to cooperate), you can work stuff like that out.

I used to be a reporter for the Arizona Daily Star in Tucson. We had a portable PCSO unit that was set up so it would not transmit. I¹m not sure if it was purchased or leased or whatever but it was through some sort of arrangement the sheriff¹s department had with the media in Tucson. I don¹t know any other particulars.

> Dan
> Tempe AZ

Maybe I should bring my scanner with me again the next time I go over to Mill Ave. on a Saturday night, and see what activity I can hear there.

I'm on a hot air balloon crew as a crew chief and a student pilot, and many crews use 151.625, 151.700, 151.805, 151.895 and 151.955 for their air-to-ground chase communications. The next time you see any, (usually early in the morning), scan through the 151 MHz band, and you may hear some. I've heard one or two crews on FRS as well.

Peoria high school also used 151.625, 154.570 and 154.600 for their security and maintenance comms.

There's an apartment complex or assisted living complex/nursing home close by me somewhere which had 2 of their maintenance guys on 151.880 some time ago.

151.820, 151.880, and 151.940 had about 30 licensee's nationwide on them prior to the birth of MURS, and the opening of these channels to personal communications. Most users will stay clear of 154.570 and 154.600 due to their heavy commercial user population. I'm most interested in knowing about non-commercial, family/group of friends comms.

MURS won't have the skip problems of CB, and won't be anywhere near as crowded yet as FRS is in many metro areas now, nor does it have the CB'er mentality among it's users yet. (There's been some isolated reports, including Hams modifying their rigs and using them.) Should be perfect for license-free family communications untill it catches on with consumers and gets saturated like FRS has. It's Part 95 along with CB, FRS and GMRS, and is considered to be a VHF-CB band. It may be worth keeping an ear on. (I sound like an advertisement.....)

It is definitely something new. For years Glendale has had only one channel out of their 10 trunked frequencies cycle through every 24 hours as the 'lock-out' channel, . . usually 857.4375 - 858.4375 and 860.4375. I've noticed 859.7125 with the unfamiliar tone continuously since I first posted and I'm unsure whether this would be associated with Glendale going digital by the end of the year?

Quoted from the "Arizona Public Safety Statewide Network
Inter-Agency Radio System State Plan"

"The system assists agencies requiring a radio contact
with another agency's unit concerning a public safety activity
in which the nature of the emergency or activity dictates that
the use of regular radio channels would not adequately
provide the communications capability necessary to
successfully complete the operation."

No, there is NOT a link to USA-1 currently.
Not even sure who has control of that right now.

It's main use is the "VHF Statewide" channel for DPS. However, DOC also managed to get it. Walter Howard posted an answer to a similar question back in March. Here it is again:

"The "intrusion" alarms are actually the Lewis Prison in Buckeye (or was it Florence?). Through some fluke (mistake), DOC was allowed to license "VHF State" for that purpose, AND license a paging transmitter on a Phoenix Fire channel at Lewis. So.... DPS doesn't listen to that. Only DOC at Lewis (Florence). And you won't hear any other traffic on that besides the alarms. Dispatch to an alarm is handled on a "yard" channel."

Hope that answers your question.

John H. Guetherman

That's the VHF Statewide channel.
It is NOT cross-banded to UHF STATE.
We only have 11 sites where it appears.

DPS doesn't use it much since the move to UHF.

I remember hearing a Pinal S.O. unit call in to get some
backup to watch his prisoners while he changed a flat
on I-10.

Also, those in the Phoenix Metro area, pay attention to
DPS channels other than patrol on Friday (Bush).

The previous radio co-ordinator at DOC had a habit of not listening
to the frequency co-ordinators and licensing on a "field study."

>So.... DPS doesn't
> listen to that. Only DOC at Lewis (Florence). And you won't hear any

Wrong! I, myself got called out on a weekend to try and figure out
what the interfering signal was. Finally called my counterpart at DOC
to get it off that frequency.

I was listening to Phoenix PD today (Maryvale Precinct) and
heard them 4 times looking for units for a "211 T Tom" all
for the same location.

I have a 211 and a 211 A listed on my code sheet, but not a 211 T.
Obviously the 211 T is related to the 211, but I don't know what the T
suffix is. Anybody on the list know what the T suffix denotes?

Thanks in advance,

Talie

The reference to the 211 T is for the transmitter that is often in with the bills that a suspect receives when they rob a bank. It can have a small explosive charge filled with dye to mark the suspect and money if it is tampered with. The 211T receivers are mounted on various towers around the valley and on many police cars and helicopters and they can track the transmitter much like LOJACK.

The often are triggered by other things and you hill hear PhxPD saying what zones are active with a signal sometimes.

Ah! Thanks Roy. Didn't know the banks did that out here.
I used to work for CitiBank in NYC and they didn't use them.
Neither did Chase Manhattan Bank.

The "assault weapon" ban didn't stop the [World Trade Center/Pentagon]
terrorists, Brady checks didn't stop them, the high capacity magazine
ban didn't. Right to Carry would have. If it had saved only one tower
and the people in it, it would have been worth it.

Tracking this sort of low power TX in a major city like NY is not a very
practical thing to do. You are also counting on your mobile equipped
units to do most of the localizing do to the blockage and reflections of
all the TALL buildings.. Ever try to get around fast in Manhattan in a
car even Code 3??? Phoenix, Denver, Cheyenne etc. are the type of
communities where this makes more sense!

Nope, nothing spectacular. I didn't work for NYC EMS.
Just a private company. Still had to use lights and siren
on some calls when the patient went downhill.

3483. Codes

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2002-09-28 16:55:49 UTC
From: gcrogan
Topic: 3483 Message: 3483

Since I am new to the Tucson area and only here a few weeks a month
hopefuly some one can shed some light on codes I hear.

The ones I hear that confuses me are
" a number 1 male "
" A number 3 Female "
Now I'm sure these refer race or ethnic back ground and in this PC
world we sure don't want to offend any one.
Hopefuly some one will give me a breakdown on what these mean.

Thank You
Greg

Greg,

Check out Page 145 in the new Southwest Frequency Directory ARIZONA 7th Ed.
(http://www.scannerstuff.com/SWFD-7-AZ.htm). The breakdown is:

Think "HI-BOW", in that order (1-5)...
Hispanic, Indian, Black, Oriental, White.

Back in the early '70's, it was refered to as the MINOW chart
M: mexican
I: indian
N: negro
O: oriental
W: white
And they were numbered accordingly, M= #1, ect ect. There was
also a #6, it was unofficial, but it was widely known as, in one officers
elegant fashion, "a G.D. hippy!". I dont know if they use this one or not
any longer, but it was heard many many times on the air during my youth!

3490. RE: [ArizonaScanner] Codes

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2002-09-30 16:50:03 UTC
From: Dan Rollman
Topic: 3483 Message: 3490

August,

SWFD7 may be offered on CD at some point, but due to the rampant copying and free distribution that naturally goes on with software of that type (and did occur with the 6th edition CD), we will wait and allow the print publication to reach our customers before the "floodgates" of relatively easy copying are opened, just as we did with the 6th edition. It's unfortunate that honest folks don't get to have their hands on a CD version as soon as they otherwise would because of some dishonest types, but it's the reality of publishing these days. We simply can't afford to dedicate the time and resources to producing new editions of the book if we only "sell" a handful of copies because files are made available on the net.

My hope is to be able to collect the new Arizona book, the new Oregon/Washington book, the Phoenix Metro Guide, and the online "Publication Updates" to these publications all on a single CD in the future!

Dan

Dan,
I understand your problem! Perhaps selling the SWFD with the CD inserted in the back cover might be a way to go as Radio Shack does with the "Police Call" frequency guides. This doesn't help with the bootlegged copies problem but to me it makes an attractive package to buy. Just a passing thought.
Thanks Dan,
August

This is interesting Dan. A major development like this scanner and they didn't allow for the new narrow channel splits in the VHF 2 meter ham band up through 162 mhz, nor the 6.25 KHz splits in the UHF band and on the 6 meter ham band (50 to 54 MHz they only allow for 10 KHz steps??? This seems like a big oversight to me. Right now the State of Nevada's new VHF trunking system is using the new narrow 7.5 KHz channels with 2.5 KHz deviation. You would thing they would provide 2.5 KHz steps on VHF and 6.25 KHz steps on UHF. This is hard to understand.

August,

It does do 7.5 KHz steps, so the state of Nevada system will work just fine. 6.25 it does not, why I don't know... but that is small fries. I have yet to try and monitor something that uses a 6.25 step in all honesty, and if I did, I'm confident the 7.5 setting (off by just over 1 KHz) is hardly going to make a difference. Regardless, it's what you call "Version 1.0". It's an issue that would require nothing more than a firmware upgrade (the BC245 has about 6 versions now, each of which added additional options and fixed issues, like the 5 second multi-trunk delay). So I'm honestly not counting that as any big deal.

You're right, it would be nice if they just got 6.25 steps in there from the get go, and the 700 MHz band to boot. But there's plenty more interesting things to be noted in the release of this scanner, most of them positive.

Dan

Forgive me for not showing my unbridled enthusiasm.

That's one thing that I don't like with most every multi-hundred channel scanner. Too many channels in each bank. I want something where the user can decide how many channels go into each bank. Maybe in groups of 10, at least? I would have:

Bank 1, 10 channels. Peoria PD UHF Conventional, and Peoria City 800 MHz Trunked
Bank 2, 10 channels. Interagency Mutual-aid - VHF, UHF, and 800 MHz
Bank 3, 10 channels. Glendale Trunked - 16 PD talkgroups
Bank 4, 10 channels. West Valley PD's - UHF and 800 MHz Conventional
Bank 5, 40 channels. Phoenix and West Valley FD's (May break down to two banks)
Bank 6, 20 channels. Phoenix Police - VHF and Air
Bank 7, 10 channels. Phoenix Police - UHF and Air
Bank 8, 20 channels. DPS - UHF, and VHF Statewide
Bank 9, 20 channels. Capitol PD/DOC/DOJC
Bank 10, 30 channels. Game and Fish/State Land/Agriculture
Bank 11, 30 channels. Maricopa County Trunked - 150 county talkgroups (White Tanks/Oatman/Smith Peak/Yarnell Hill sites)
Bank 12, 20 channels. Maricopa County Trunked - Surprise PD-FD/Sun City West Posse - 20 talkgroups (White Tanks only)

Comes out to 230 channels so far. Yes, there would be empty channels in several banks.

I'm still waiting.

Yup, wouldn't we all. Problem is there's no simple way to activate/deactivate banks beyond ten (there's only ten number keys on the scanner). There are ways. Uniden tried adding lettered keys for banks 11 - 20 on the BC9000. I thought it was great, but they get to make the business decisions on whether it works or not.

None the less (spacing, banks, channels, number of talkgroups) are all issues that have been hashed out time and time again over the last year or so on the lists dedicated to this specific scanner. It's old news.

I too wish it had more talkgroups per bank. Everybody does. But it must make Uniden shake their collective head at the sociology of our hobby when they introduce the first-ever digital scanner (allowing us to again here something that was entirely lost to our ears) and the response is a lack of enthusiasm because it "only stores 1000 talkgroups" (many more than any Motorola brand handheld I know of... costing 10 times as much!). :)

Dan

Couldn't this problem of accessing more than 10 banks be solved by either
a Function Key enabling a user to punch in 11, 12, 13 etc?

From: Tracy
Topic: 3492 Message: 3504

The way I see these latest products from Uniden, it's simply adding digital capability to their existing designs (Which are particularly excellent IMHO). If your happy with your current conventional receiver and have no need to monitor digital then this is not the radio scanner for you. The BC245XLT and BC785XLT are the most popular radio scanners on the market today and these new models are just an extension of the product family.

I'm elated that they (Uniden) have gone out of their way to include some features that have been voiced in the past like the ability to automatically store frequencies during search (my first Uniden radio scanner could do that) while meeting their design goal of producing a digital capable radio receiver.

Perhaps next year at this time we will be frantically awaiting a completely new family of radio scanners from Uniden, most likely at a higher cost. In the mean time, now is the time to voice your wishes to Uniden and to other radio scanner manufacturers.

Personally, I'll be purchasing the BC250D with the Digital Card. The BC245XLT will replace the Rat Shack scanner currently broadcasting over the Internet and will be adding features to remotely program the channel plan.

I don't know specifically, but all Sta19 equipment (including Foam 1, 2, and 3) is only an Alert-1 (the most minor response, usually for a plane already on the ground). These are probably a couple times a day.

An intermediate response, for a fairly insignificant problem with a plane still in the air, is an Alert-2 and gets everything you describe, plus 2 more engines (usually E29, E16, E11) and a Ladder (usually L11).

A more significant response is a First Alarm Alert-2, which is all of the above, plus 1 Deputy Chief, 2 more BCs, 2 more engines, a utility truck, and the command van. This would be for a fairly severe inflight problem.

In other words in response to what's going on there, if all you heard was all the Sta19 equipment and all the foam trucks, "not much" is the answer. :)

See Page 92 in the Southwest Frequency Directory (http://www.scannerstuff.com/SWFD-7-AZ.htm) for more precise rundowns on the airport assignments.

Phoenix Fire Stations:
Locations and Apparatus

http://www.ci.phoenix.az.us/FIRE/stations.html

You can click to a map of the city area with the station icons listed. I wonder if it would be worth creating a click-through map over the fire stations. Click on the icon and it would pop up a apparatus list for that station.

3516. bc245xlt static

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2002-10-05 20:07:15 UTC
From: liferocksj
Topic: 3516 Message: 3516

I have a bc245xlt that i picked up a few years ago. It worked great for a long time, now for some reason, it is as if something has gone wrong on the reciever board. I cant recieve anything anymore, when the squelch is turned up it is never broken, and when i turn it all the way down, all i hear is static, even on the strongest channels. The problem is not with my antenna, as i have replaced it and it still does not work. I took the scanner apart to see if the solder to the antenna had come loose and it is still perfect.
Anybody have any ideas on what the problem might be? Or where i can take it to get fixed, at a price that is reasonable?

If all you are hearing is white noise with the squelch wide open and no station traffic it could be any one of a dozen things most likely a defective transistor or IC. Your best bet is to send it to Uniden and get it fixed right the first time. It may well cost a bit more than someone local but their work is 100% guaranteed, they have the "Parts and the Smarts" to do it right!

This new equipment that was assembled by automation is very tricky to work on. Check the used market price for a BC-245 and see if it is worth the money to have Uniden repair it. It may be that it is if I had to guess. They will give you the minimum charge over the phone then add at least $20 for parts and you will come close!
August
==========

Subject: [ArizonaScanner] State Fair

I was wondering if anyone, mainly Walter, knew what frequencies DPS was going to use for the fair this year. Also, what channels the medics use and such.

I haven't listened in a couple of years and think it might be time to this year.

3520. Phx Fire station 13

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2002-10-07 01:18:08 UTC
From: fyrfotog2@aol.com
Topic: 3520 Message: 3520

If anyone is interested, the A shift Capt at Phoenix station 13 has for sale t-shirts, patches, stickers and hats for their station. I am not sure of the prices for everything, but I am sure they are not very expensive. I have a patch and they are pretty damn nice for $4. Contact me off list if you want anymore info on how to get a hold of this stuff.

David

From: Tracy
Topic: 3516 Message: 3522

You might try reseting the scanner to factory defaults before going out to get it fixed just in case you accidently put it in some test mode. I think the command to reset it is to hold down the 2, 9 and MANUAL keys while turning the scanner on.

3523. DPS radios

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2002-10-08 05:46:28 UTC
From: watkd
Topic: 3523 Message: 3523

How does DPS get there radios to transmit so far. Is it because there frequencies are in the 400Mhz range. I used to live in Oklahoma and there radio systems dont transmit as far. They use a two channel thing. On one frequency the dispatcher talks and on the other the units talk. (They claim to have 50's radio technology, maybe that has something to do with it).

3524. Re: [ArizonaScanner] DPS radios

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2002-10-08 07:12:03 UTC
From: Roy Schahrer
Topic: 3523 Message: 3524

I think a large part of the rang would have to do with the fact that Arizona has a LOT more mountians than Oklahoma. Antenna height has a whole lot to do with range and when you have tall mountians to mount repeaters on top of the range increases. DPS also has a very extensive stable of repeater sites that are linked via microwave that can cover a very wide area as well.

From: August/W8MIA
Topic: 3523 Message: 3525

Hello ???,
I suspect from what you have written you may not understand how repeater systems function and how they might allow you to use low power, 2 to 4 watt portable, transceiver and be able to talk from one border of Arizona to the other. If this is so please let us know about your knowledge in this area and we can go from there so you can get a valid answer to your question which is an excellent one often asked.

http://hraunfoss.fcc.gov/edocs_public/attachmatch/FCC-02-271A1.txt

In the Matter of
Amendment of Part 95 of the Commission's Rules to authorize the use of 406.025 MHz for Personal Locator Beacons (PLB)

)
) WT Docket No. 99-366
)

REPORT AND ORDER
Adopted: September 27, 2002
Released: October 8, 2002

By the Commission:

I. INTRODUCTION AND EXECUTIVE SUMMARY

1. In the Notice of Proposed Rule Making (Notice) 1 in this proceeding, the Commission proposed to establish a new Subpart H - Personal Locator Beacons (PLB) under Part 95 of the Commission?s Rules, to permit the use of frequency 406.025 MHz for personal locator beacons. In this Report and Order, we amend our rules to provide for licensing individual 406 MHz PLBs by rule, require mandatory registration of 406 MHz PLB with the National Oceanic and Atmospheric Administration (NOAA), and require manufacturers of 406 MHz PLBs to comply with the Radio Technical Commission for Maritime Services (RTCM) Recommended Standards for 406 MHz Satellite PLBs. We believe that these rule changes will further the public interest by facilitating the use of radio spectrum to increase the safety of the general public in life-threatening conditions in remote environments after all other means of notifying search and rescue (SAR) responders have been used. In addition, we dismiss as moot requests by ACR Electronics Inc. (ACR) and McMurdo Limited (McMurdo) for waiver of the Commission's Rules to permit the type certification of a new 406 MHz personal emergency position indicating radiobeacon (EPIRB), 2 for the reason that the rule changes we adopt today permit the equipment proposed by ACR and McMurdo.

The DPS officers use State Tac, 460.225, same as State with a different
PL.

VMC (coliseum) is on 453.250.

There is always a lot of FRS and MURS activity from the vendors.

It all depends if they are military or commercial aircraft. If they are US a/c or from another country such as Canada, Mexico or???

They are VHF and UHF equipped and that is what they will use. Mainly VHF for civilian A/C, UHF for Mil A/C. If they are international carriers flying over water to the Islands, Australia, Japan, etc. they will also use HF SSB, USB frequencies with frequencies in the 3 through 15 MHz range that I know about perhaps even a wider range. There is a good deal of trans oceanic SSB traffic in the 4 and 8 MHz range I would often listen to while living in CA.

But mainly in the 118 MHz through the 137 MHz freq. range on AM, 25 KHz channels.

In the AM band (as in your car's AM radio), flat is good for distance. On FM, and at higher frequencies, flat translates to "lack of good place to position repeaters for good coverage." (This is a very, very abstract and basic assertion, so techies, please realize I too know it's more complicated than that!)

I don't know if you own a copy of the Southwest Frequency Directory 7 (http://www.scannerstuff.com/SWFD-7-AZ.htm), but if you do check out Page 5 for a good description and diagram of what a mountain top repeater accomplishes.

A repeater sitting up at 10,000 feet and overlooking a huge area below, can transmit over a much wider area than can be accomplished from a tower that rises a few hundred feet up from sea level dirt. Since most of DPS's repeaters are positioned on some of the most radio-prime mountaintops in the state, they reach well off into the distance. Combine that with the fact that the repeaters can be linked by microwave as someone else mentioned, meaning an officers signal can be picked up by a mountaintop repeater site in Southern Arizona and relayed out a repeater site near Flagstaff, for example (this extreme example would be rare), and you're covering a huge area.

The high altitude (above Flight level 180, or 18,000') Flight Watch frequencies for the southwestern U.S. are:

Albuquerque Center: 127.62 Most of New Mexico and Arizona, western panhandle of Texas

Denver Center: 124.675 Far northeast Arizona, eastern quarter of Utah, almost all of Colorado, eastern Wyoming, western two-thirds of Nebraska, northwest quarter of Kansas

Los Angeles Center: 135.900 western strip of Arizona, southwest strip of Utah, southern Nevada, southern California

Active from 6am to 10pm local time.

I don't know how old the information is. It was posted July 2002. Got this from:

http://groups.yahoo.com/group/AirCommSouthwest/files/ARTCC%20Folder/artcc-FW.gif (Archives for members only.)

I don't normally monitor aircraft beyond 123.025, helicopter common, and 123.550 the Phoenix police air support company channel. Occasionally I have programmed 134.050 in, which is/was used by the traffic reporting fixed-wing aircraft.

If you're in Phoenix, one of the places you can go to buy the 7th Edition of the Southwest Frequency Directory is Ham Radio Outlet, on Dunlap Ave., west of 19th Ave. Worth the money.

AirCommSouthwest is a good group to join as well. It primarily covers the 11 western states, as well as Texas. If you have any questions regarding aircraft radio monitoring, you can find the answer there.

They are referring to a simple "voice inversion" scramble technique.
This is a very old idea that was used back in the 60's as a basic and
very simple form of analog scrambling of voice messages. It has been
revised in the last few years to try to improve FRS, GMRS & MURS
equipment sales as a gimmick more than anything.

This is NOT the same as decoding a cyphered digital signal which is what
you are referring to.

3543. RE: [ArizonaScanner] Re: VHF Aircraft Band Question

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2002-10-09 23:52:35 UTC
From: Dan Rollman
Topic: 3531 Message: 3543

The bulk of the conversation concerned how different kinds of radio systems (repeaters) work, as well as DPS designators, both of which are detailed in SWFD7. My guess is that is what Mike was referring to when he recommended SWFD7 to answer a lot of WATKD's questions. And in terms of high-altitude aircraft, see Page 13 for the UHF (military oriented) frequencies for Albuquerque Center, including a map of Center regions. More covert military combat air patrol and other similar frequencies have never been unambiguously published in SWFD, and won't be for a multitude of reasons.

K= K9 unit (canine)

Other than a highway patrol unit, you WILL hear 100 series
callsigns all across the state.

?x00 = Lieutenant
?xx0 = Sergeant
?= group designator, i.e., D=detective, N=Narcotics, K=canine, etc.

Subject: [ArizonaScanner] Race for the Cure - Sunday

Does anyone know (off the top of their head?) what the likely channels PFD and PPD will be using for the run/walk on Sunday in downtown Phx?

David French, N7FAN

My point was:

Even with the resources I have at my disposal, I find the SWFD a valuable
and easy to use resource.

3557. skip active on vhf low

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2002-10-12 18:13:16 UTC
From: djr503
Topic: 3557 Message: 3557

I have been getting lots of skip on vhf low this week from 30-50MHZ.
The skip is coming mostly from the east coast, civ and military
comms but there is a lot of spanish also.
Dan in Tempe

3558. DEA surveillance

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2002-10-12 21:45:32 UTC
From: Gabe G.
Topic: 3558 Message: 3558

I have been receiving DEA surveillance going on in west Phoenix area the past 2 days on 418.950 and 418.975.

3564. AZ license grant User Information???

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2002-10-14 23:24:36 UTC
From: August/W8MIA
Topic: 3564 Message: 3564

Rich,
Or anyone that can help out. I appreciate receiving these listings each week but do not fully understand what I am reading. I understand the agency or company involved and the frequencies involved etc.

Where I have a problem is with the acronyms used such as "KMRA"? MO? 2x25w? FX1?
19' FB 75e? and so forth. It would be very helpful to have a list of the meanings to make the list more understandable. There are also longer terms written out such as: "Land Mob Ctrl Sta Mtg 20 Rule" What in the world does that mean please?

I think this would be very helpful and I'll bet I'm not the only one that is not as bright in this area as they should be!!! (; -))

Any amount of help will be great!
August

>

Let's see if I can help:

KMRA = Kilometer radius around a specific site. (Authorization to use a specific frequency in a specific area.)

FB = Base Station(s)

FB2 = Repeater(s)

FX1 = Control station(s) (Input to a repeater, although I think most actual control is done by wireline or microwave links nowadays. A control station would most likely be a backup.)

MO = Mobile station(s)

2x25w = Number of transmitters at a specific power output.

75e = Power output measured in Effective Radiated Power, (ERP) not transmitter power output (TPO).

45.16 59' FB 75e = Frequency, Antenna Height Limit, Base Station, 75 watt ERP limitation.

Mtg 20 Rule = I don't know. Probably refers to a specific rule section in the FCC Rules Part 90. Control stations are required to use the minimum amount of power necessary to perform their control functions. It may refer to that.

Corrections are welcome.

See if this helps.

http://www.freqofnature.com/grants.html

This is an online new grants database, similar to Rich's list. It
includes links to the FCC web site explaining the codes they use.

Per the attached Public Notice we will be deploying a redesign to ULS
license search this Thursday October 17th. The revised seach, which will
be
available after 6:00 P.M. tomorrow, is in response to customer feedback.

Appendix A of the Public Notice provides a description of the changes. If
you have any questions, or comments please let us know. Thank you Dorothy
Conway

PUBLIC NOTICE

Federal Communications Commission
445 12th St., S.W.
Washington, D.C. 20554

DA 02-2502
October 3, 2002

REDESIGNED ULS LICENSE SEARCH DEBUTS THURSDAY, OCTOBER 17, 2002.
Improved Software, Innovative New Features, and Expanded Search
Capabilities available for all Wireless Services

As part of a continuing effort to strengthen the Universal
Licensing System (ULS), the Wireless Telecommunications Bureau (WTB)
announces the debut of an extensive redesign of the ULS License Search.
Enhanced License Search was previously only available for a limited number

of radio services, including Amateur, Ship, Aircraft, GMRS, and Restricted and Commercial. See "Universal Licensing System's License Search Redesigned for Certain Services," Public Notice, DA 02-645 (March 26, 2002). Access the new functionality and enhanced search capabilities via the Search Licenses link on the ULS homepage, http://wireless.fcc.gov/uls.

The new layout and improved functionality of ULS License Search provides FCC customers more search options, better control of search criteria, and faster, easier navigation of displayed licensing information. Enhancements include customizable views of locations and frequencies associated with a license, printable page formatting, printable reference copies of authorizations, and a host of other new features which improve performance and provide greater access to the WTB's license database. All of the new features of ULS License Search were designed with the needs of ULS customers in mind?we listened to your comments in focus groups, letters, calls, and emails.

For information on specific License Search features, please see Appendix A.

Note to Users Who Bookmark ULS License Search: When the redesigned ULS License Search is deployed Thursday, October 17, 2002, the current ULS License Search will no longer be available. Please update your bookmark or favorites list with the new URL.

For more information about the issues covered in this public notice, contact ULS support at the locations listed below:

FCC Technical Support Hotline: 202-414-1250 (TTY 202-414-1255), or via e-mail at
ulscomm@fcc.gov. Contact the Technical Support Hotline about questions concerning computer access
to ULS, your FRN, uploading files, or submitting attachments. The hotline is available Monday through
Friday, from 8 a.m. to 6 p.m. Eastern Standard Time (except federal holidays). In order to provide better
service to ULS users and ensure the security of the electronic filing system, all calls to the hotline are
recorded.

ULS Licensing Support and Forms Information: 1-888-CALLFCC (225-5322), select option #2 or
717-338-2888. E-mail questions may be sent to ulshelp@.... Contact Licensing Support with
questions about which application purpose(s) are appropriate for a particular filing, what information is
being requested on a ULS form or schedule, or any other ULS-related licensing matter. ULS Licensing
Support is available Monday through Friday, from 8:00 a.m. to 5:30 p.m. Eastern Standard Time (except
federal holidays).

Appendix A
New Features for ULS License Search
Here are just a few of the new ULS License Search features:
· Speed and Compatibility?The new search not only features a bold new Web design, but improved system software. New Java Server Pages technology and HTML forms dramatically increase the speed of searches and cut the time required to load search results pages. Many browser/operating system compatibility issues have also been eliminated.
· Direct Access to Information?One of the guiding principles for the redesign of License Search has been to minimize the need to "drill down," i. e., follow link after link to reach the information you need. Many of the new features, such as navigation tabs and menus for the license detail pages, were designed to provide you with direct access to the information in our database. License detail screens have also been designed with accessibility in mind.
· New Basic and Advanced License Search Pages?ULS License Search has been divided into a Basic and Advanced search?similar to commercial search engines available across the Internet. The search fields most often used by ULS customers can be easily selected on the Basic Search page, eliminating the need to read through the entire list of ULS search fields. If you require a more detailed set of search criteria, select Advanced Search.
· Service Specific Searches?New service specific search screens reduce your work and allow you to enter search criteria only pertaining to licenses within a specific wireless service. Service Specific Searches are available for Amateur, Aircraft, Commercial and Restricted, GMRS, Ship, and Market-Based licenses.
· No Limit on Search Results?There is no longer a limit to the number of records returned by License Search. Previously this limit was set at 3,000.
· License Search Detail Screens?The ULS License Search detail screens have been designed to make finding information on licenses straightforward. New navigation tabs across the top of the screen provide you with instant access to general and administrative information, antenna and transmitter locations, frequencies, and other data. The detail pages also provide a number of custom features for finding and organizing information:
· Click on the file number of an application or automated letter to access those records directly in a new browser window.
· Display all Locations for a license, or 'jump" to specific locations, using navigation tools at the top and bottom of every Locations page.
· Display detailed Frequencies data in different views, customized for each radio service.
· Quickly access all frequencies associated with a given location, or click a convenient jump menu to "filter" frequencies by locations.
· Improved Geographical Search?Find a location by searching around a geographical center point. Specify the point by state and county; by street address, city, state, or zip code combinations; or by latitude and longitude. Combine an advanced search with a geographical search to display results geographically.
· Printable Page?A new Printable Page button appears at the top of every search results and detail screen, allowing you to print the contents

of the page pre-formatted for most common printers.
· Reference Copy?A new Reference Copy button appears at the top of every license detail screen, allowing you to print an unofficial copy of the license.
· Redesigned Query Download?Click the new Query Download button at the top of any search results screen, enter your e-mail address, and ULS will send the results of your search to you by e-mail in a pipe-delimited text (*.txt) file. Import this file into your favorite spreadsheet application.

Give that man a Cheroot!

There are a number of other agencies allowed to use DPS frequencies.
No, I can't publish the list, sorry.

Okay, then that means that the new SWFD is incorrect. ON page 32 the
Callsign Prefixes lists Liquor Licensing/Control as Liquor.

I guess that needs to be clarified.

Native Air is putting into service Native 8 (located at Lake Havasu Regional Medical Center) and Native 9 (Navapache Hospital in Show Low) I have uploaded a photo of Native 8, complete with the new paint scheme. Look for this paint scheme to appear on all new aircraft and to slowly be phased in to the existing fleet.

Native 8 will be working off of the Fisher Wireless system for radios, and the rest of the fleet is expected to migrate that way as well. The fisher system is part of the passport trunking system which from my understanding is not able to be scanned by any scanner (yet).

As I get more info I will pass it on.

Well....

To be picky, metro Phoenix call signs are actually
MTxxxx, but only the "brass" use the "metro"
part of their call. .

The officer and dispatcher understood each other,
which is the real point.

3583. Motor Escorts

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2002-10-21 22:36:49 UTC
From: Dave
Topic: 3583 Message: 3583

A few months ago, there was some discussion about some new motor escorts.

Last Friday I saw these 4 funeral escorts getting ready for a procession. They were all driving Crown Vics, 2 were obviously old pd cars, with Federal JetSonic Lightbars. There were no markings on the cars and they wore plain black uniforms with no patches. But alas, this time they had radios.

They were carrying older model Motorola portables with Key Pads on them and they appeared to be 800 mhz.

Sorry I can't provide more. I was looking at them from across the street with my binoculars and they were getting a little paranoid. Maybe they thought I was the competition.

3584. Old PFD Battalion Car

Yahoo group: ArizonaScanner (1999 — 2002)

From: Dave
Topic: 3584 Message: 3584

Sorry for all the posts at one time. I just have alot to say for a change.

Today I saw an old PFD Battalion car. One of the old Dodge sedans with the big Federal rotators, chrome siren speakers and even the air horn up on the light bar. The reason it really caught my eye was one, the big old light bar and two it was well polished and looked new.

It was sitting at an intersection and I went through it so I didn't have time to see if it had antennas on it or Municipal plates. The only thing that I saw that was weird was it had the new PFD emblems on the doors. I think they still used the old Phoenix seal in those days.

Does anybody know if this is still owned by the city and is some special use car or does it belong to an individial?

Who said they are trying to be secret? I highly doubt secret has anything to do with it at all. Considering they have such a great pro-active public and media relations department, I think they want to be anything but secret.

Native Air is small enough that it doesn't make much sense for them to set up their own repeaters on mountain tops all over the state, but they cover a large enough area that just a few repeaters won't do it. They have been using a patchwork of various providers and repeaters around the state, from several different vendors. They've needed a single, reliable, wide area communications system for a while. Sadly, since Nextel bought out and shut down so many of the old 800 MHz SMR providers that blanketed the state, Fisher Wireless is one of the few good options left for Native's application, and from what I've heard it is working well for them.

This great communications system happens to use the Passport protocol, and Passport happens not to be something a scanner is available to monitor. I don't think Native intended any of this last part, it's just the way it is.

3588. RE: [ArizonaScanner] Native Air

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2002-10-21 23:32:51 UTC
From: Michael Todd
Topic: 3581 Message: 3588

Hmmm
I don□t think I ever mentioned the word "secret"
In today's day and age it is very costly to operate a radio system that
covers as much ground as we need it to cover.

In fact, aside from the fisher wireless system, there is no radio system knowledge that continuously covers California, Las Vegas and Arizona all on one talk group or frequency.

As business continues to grow, we have exceeded our present radio system which consisted of an LTR 900 Mhz system that offers coverage within the valley, and stretches north and south once aircraft are in the air.

Our globe helicopter is on (and has been on) a 450Mhz conventional system since it's inception. Why? Because once again it's the only radio system that covers the areas that aircraft typically flys.

Let's face it, more and more agencies are going trunked, mainly because of the many features that a trunked system has (secrecy not being one that is high on our list).

When I mentioned the system was not able to be scanned, it was not a "ha ha you can't hear us" type of thing. Perhaps I should have included a sad face at the end of it.

If you have any more questions, please feel free to post them or email me.

Thanks

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2002-10-22 09:39:45 UTC
From: John H. Guetherman
Topic: 3583 Message: 3589

I originally posted this on 13 Dec., 2001:

"Phoenix Metro Traffic". Remember the questions about them several months ago? I saw a Caprice/Crown Vic, in a funeral home parking lot with several motors at 67th Ave. and Thunderbird Rd. Wednesday morning, fully decked out with a light bar, and even push bars on the front bumper. Not sure about antenna's, but I could have sworn it had multiple. Big, bold graphics on the side with their name. Has anyone figured out their frequencies yet?

Not to sound morbid, but maybe someone can check the obits for memorial/funeral service dates and locations, and maybe quietly grab a few pictures from a respectful distance? I don't have a camera of my own, sorry. Would they be in the phone book? Or does the funeral home arrange that?

Mike Todd is correct. For some reason the Phx Fire Dept has decided to preserve a small part of their history and not anything else.

That is Chief Brunicini's old Battalion Chiefs vehicle. It is kept at the old station 8 located at 7th Ave & Encanto and they call it "Historic Station #8 now. An almost total remodel was done interior including the purchase of "new" but old kitchen equipment to bring the station back to what it looked like during the 50's & 60's. I am not sure if they really plan on making it a museum, but if you go in there they are working on pictures and news articles etc etc etc on the walls and such. I have donated every PFD news article I have saved since 1989 and have shot some photos for them

Take a stop by and say hello to sometime its a neat place.

Message: 1
Date: Tue, 22 Oct 2002 16:09:15 -0700
From: "Curt B Knight" <cknight@...>
Subject: *** Meeting Reminder*** October 24, 2002

The next meeting for Region 3's 700 MHz planning committee will be in Bisbee,
Arizona this Thursday, 10/24/02.

The meeting will be held at the Cochise County Board of Supervisors conference
room from 1 PM to 4 PM.

1415 Melody Lane, Building "B"
Bisbee, Arizona 85603

I know it's a long way for some of you to travel; maybe you can develop a
"car-pool" with the City, Town, County, Federal, Tribal, or NGO jurisdiction in
your region. How about one that you know that has not been represented at
previous meetings.

Prior to the meeting please take a few moments to review the Seventh Meeting
minutes, as well as the current edit of the DRAFT by-laws. Those of you that
can not attend, please forward any comments, corrections or additions to me. I
will then make sure they are presented at the meeting.

As a convenience to new members I have attached the meeting notes and by-laws.

(See attached file: 700RPC-7th-Meeting-minutes.doc)(See attached file: Draft_Region3_Bylaws_V.02.doc)

Thanks.

Yes, the Maricopa County system is a 3600 baud system with both analog and digital talkgroups, so the BC250d and BC785d will be capable of monitoring it.

3595. RE: [ArizonaScanner] 250 D

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2002-10-23 21:52:22 UTC
From: Dan Rollman
Topic: 3593 Message: 3595

You're correct, new info released by Uniden is that this first version of digital scanners (BC250d and BC785d) will not track any systems that cannot currently be tracked (3600 baud can currently be tracked, 9600 cannot). Rather, the new scanner with digital card added on will merely be able to decode the digital transmissions (which we could not previously hear) that are carried on talkgroups we could always track.

This means that at this time the BC250D WILL work for MCSO from everything I've heard, with the exception of any encryption that may decide to begin using (who knows!). Because we can track the MCSO talkgroups on our current TrunkTracker scanners (we just can't understand the digital transmissions on them), we know that the control channels are 3600 baud. We just don't hear the voice (we hear digital noise instead). To test this, program up the County trunked system on your current TrunkTracker, and then program in the digital MCSO talkgroups listed on Page 72 of SWFD-7 (www.scannerstuff.com). You'll track those talkgroups just fine! You just can't hear the voice. This is where the BC250d comes in. It won't "track" anything new per se, it will just decode a digital transmission we're already able to track.

Another way to know 9600 vs. 3600: A 9600 baud system does DIGITAL ONLY. A 3600 baud system can do digital and analog. If there are ANY analog talkgroups on the system, it must use a 3600 baud control channel. Obviously there are tons of analog talkgroups on the County system.

The new Phoenix system is another story. It will likely use a 9600 baud control channel. But rumor has it Uniden is already working on "Round 2" in the digital scanner revolution, for 9600 baud.

So, in summary, the BC250d should work great for MCSO (excepting a switch to encryption, which would end everything). But don't buy it convinced that it will also work on the Phoenix system whenever they get that up and running. That will probably require selling your 250d and buying next year's wiz bang digital scanner. :)

Dan

Subject: [ArizonaScanner] 250 D

Looks like to 250D will be available in November and I was anticipating a purchase and being able to again monitor MCSO. Now the baud rate issue has come up. Can someone advise if the APCO system used by Maricopa County S. O. will be able to be monitored? As I understand it,

if it is a 9600 baud system it will NOT be able to be monitored.

3596. New scanner to track P.C.S.O

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2002-10-23 22:38:12 UTC
From: watkd
Topic: 3596 Message: 3596

I asked uniden if the 250D was able to track multi-net II radio systems this is what I got back from Uniden.

Thank you for contacting Uniden we do appreciate your business and are happy to help.

The answer to the customers question is yes. Our new digital scanners will track EF Johnson and Multi-net.
The new digital scanners are due to be out in November of this year.
You can check them out on Uniden's web site at www.uniden.com

If you have any further questions just let me know.

Sincerely,

Becky Weverka
Red River Solutions, CSR

From: Dan Rollman
Topic: 3596 Message: 3599

Watkd,

The person answered a question you didn't ask. You asked if it would track MultiNet II (Enhanced LTR), and they responded yes, it will track MultiNet I (traditional LTR). Even the 780 tracks MultiNet, but not MultiNet II. Neither the 250D nor 785D will track Pima SO's MultiNet II system, sorry to say.

Pima SO was one of my favorite agencies to listen to for the very short time they were EDACS after the 245 came out. I really miss being able to track them, and sadly we won't be able to anytime soon.

Dan

Subject: [ArizonaScanner] New scanner to track P.C.S.O

I asked uniden if the 250D was able to track multi-net II radio systems this is what I got back from Uniden.

Thank you for contacting Uniden we do appreciate your business and are happy to help.

The answer to the customers question is yes. Our new digital scanners will track EF Johnson and Multi-net.
The new digital scanners are due to be out in November of this year.
You can check them out on Uniden's web site at www.uniden.com

If you have any further questions just let me know.

Sincerely,

Becky Weverka

From: fyrfotog2@aol.com
Topic: 3600 Message: 3600

In case nobody has seen or read about this, Phx Fire will open in late November their "Phoenix Fire Dept Fire House" at Spectrum Mall (formerly ChrisTown Mall) at 19th Ave & Bethany Home.

They will be selling the usual hats, shirts and junk like that. In their newsletter, it states that the main focus of the store is to provide safety info, classes and services. Shoppers can stop by for baby shots, car seat inspections, CPR and/or AED classes, recruitment and youth firesetter program information. Store will be staffed by all sorts of personnel.

Check it out!!!
Dave

I'm far from being an expert on this, but I'll take a stab at it anyway.

We won't be able to monitor those type of systems anytime soon because they are proprietary and unless E.F. Johnson or the holders of the license or patent will release the protocols to scanner makers, then any scanner that IS able to successfully monitor these systems would be violating copywrite or patent laws.

Dan or someone else can probably explain this better than me, but that is the way I understand things to be right now.

John

I think John could be exactly right. But I'm less familiar with the proprietary issues regarding the format than I am the business considerations. I've discussed this subject with a few folks who've worked on new product development in the scanner market, and the largest reason why I believe the ability to monitor MultiNet II in a consumer scanner won't come anytime soon is because MultiNet II remains rare enough that the market for such a feature is simply too small to justify the development, production, and marketing for it. It may very well be proprietary and present copyright problems, but even if these could be settled there is simply still too few people (a huge percentage of them are in Pima County, Arizona alone!) to justify it.

The digital scanner is a good example of this phenomena. It is finally being released years after the first digital public safety systems went online. It certainly appears, more than technological concerns, Uniden waited until digital systems penetrated enough communities to warrant a significant chunk of the hobby community becoming interested in the device. That market development hasn't happened with MultiNet II, and there's scarce indications it will.

If the ability to monitor these systems comes, it will likely first arrive in the form of a computer software package that runs with computer controlled scanners. Remember, before the BC245, the first EDACS scanner was "E-Trax", a software program I thoroughly enjoyed for PimaSO that worked in conjunction with my OptoCom and PC. The BC245 came later, when there were enough EDACS systems to justify it. More recently, the very guy who wrote E-Trax was working on a similar piece of software for MultiNet II, and he reportedly ran in to technical problems. Rumor has it he has more or less abandoned the project.

Ok as the newsletter states the city council DID approve this store. And why would it be against a federal law to sell t shirts and hats and novelty items like that????? Although I did not indicate these were UNIFORM shirts, I would think that most people would know what I meant.

Dave

Dave,

My guess is Talie was saying it is against federal law for a government agency to do a "smart thing", or something like that. Not that the concept behind the store itself was truly illegal.

I have since emailed him privately regarding unnecessary posts to our list.

Dave, I was being facetious.
I personally think the store is a great idea, especially for the information they will be giving out.

My comment was a dig at the Federal Government which doesn't always do the smart thing. My comment was based on that.

It was a bad joke and not intended to aggravate you or anyone else.

Well, I can tell you that the licensed location is the radio shop.
It's a couple of suites in a light industrial area.
I'll make an inquiry.

Just spoke to the radio manager at DOC.
These are "place holders" to keep someone else
from licensing them while the system is "in
progress.

Watkd,

All these responses are coming from Red River Solutions, a telephone and internet direct marketing contractor in Tulsa. Uniden engineers have already confirmed they have no plans for MultiNet II, as does the manual for the new scanners, available online, which makes no mention of MultiNet II or how one would go about configuring it.

I wish you luck! If you find that all of Uniden's engineers, right up to their VP of new product development for scanners who answered this question firmly at CES was wrong, and Scott Carpenter, the Uniden engineer who quality tested the scanner on every type of system it will work on and recently told members of the DigitalScanning Yahoo!Group that it won't do MultiNet II was wrong, and the telemarketer in Tulsa was right, I'd be ecstatic!! I'd LOVE to be able to hear Pima SO again. :-) I just don't want to see dissapointed people in Tucson who sincerely thought Pima SO was going to be able to be tracked because Becky someone said they knew better than the folks who designed the new scanners.

Dan

Tucson Police Department SWAT team is working a triple-shooting at the University Medical Center School of nursing.

They are working the incident on F3 154.725 and F7 154.115.

A gunman entered the school this morning and killed two people. It is believed that he may have shot himself.

SWAT is currently doing a floor-to-floor sweep of the building. All Tucson Police SWAT members have benn called out.

The Tucson Police Explosive Ordinance Disposal unit has also been called out and is currently bringing x-ray equipment to the scene.

They think that the suspects vehicle may contain explosives.

UAPD F1 460.350 is checking out a report of a man with a gun in the Pharmacy buiding.

3622. University Medical Center Tucson, AZ Triple Shooting

We now have 4 confirmed dead in this shooting.

The Pima County Sheriff's Office has brought in their SWAT team as well.

The Tucson Police SWAT team is bringing in AVON Frangible rounds.

Four lockers on the second floor by the northwest exit have blood on them.

3624. Right of way: Code 3 vs. Funeral procession

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2002-10-30 07:34:48 UTC
From: John H. Guetherman
Topic: 3624 Message: 3624

Who has the right of way in regards to an FD/PD/Ambo responding Code 3 vs. a funeral procession? I recently witnessed a Phoenix FD engine and rescue shut down their sirens when overtaking a funeral procession from behind at the intersection of 43rd Ave. and Northern Ave. I couldn't tell if the funeral procession pulled over and stopped to allow them to get past, or if the engine and rescue simply found their way around them. I do know they did get past.

Here's the website for the company that manufactures and markets the LED lightbars that are popping up on various agencies' vehicles recently:

http://www.911ep.com/

The lightbar is called the Millenium. I've seen them on Peoria's black and white cruisers, and it's black and white Expedition; on some Glendale police cruisers; Glendale FD Battalion 151's new Ford F-250 Super Duty crewcab pickup; and Phoenix FD Battalion 3, also a Ford SuperDuty crewcab pickup.

John H. Guetherman

Best I know, code-3 Emergency vehicles always have the right-of-way. They shut off the siren/lights, as a courtesy to the deceased. There is no law dictating anything different when an emergency vehicle is confronted with a funeral procession than any other time.

Right-of-way is also not guaranteed, as most people, especially in Arizona, ignore emergency vehicles responding code 3. Just the other day, I pulled over for an emergency vehicle, the guy in the lane to the left of me stopped in his lane. Another car went around him, using the reverse lane to pass. The fire truck was heading towards us, so I know the idiot saw it. Just one of the hazards of driving a big red truck, I guess.

I would think that common sense would dictate that the PD/FD/Ambo would have the right-of-way in that sort of situation. It seems to me that it would be about someone that might still be able to be helped vs someone who is obviously beyond help and would be easy to figure out.

Now, I know that involving the government and common sense in the same breath aren't *usually* all that easy to figure out and might even result in a totally different conclusion.... ;-)

Here's the nitty gritty:

http://www.azleg.state.az.us/ars/28/00776.htm

When all else fails, go straight to the law itself! :)

28-776.
"A. Pedestrians and the operators of all vehicles, except emergency vehicles, shall yield the right-of-way to each vehicle that is a part of a funeral procession being led by a funeral escort vehicle."

Based on that it appears to me that emergency vehicles have no duty to yield right of way to a funeral procession, which means they still have right of way given them by their lights and sirens and 28-624, and logic prevails yet again (cops and fire trucks can blow through the funeral procession Code-3 if need be).

But although logic prevails in the law on this one, common sense and courtesy probably prevailed in the minds of that Phoenix FD unit John saw, if they were responding to an ill person sick since last March or a bad bloody nose or something.

I would think that common sense would dictate that the PD/FD/Ambo would have the right-of-way in that sort of situation. It seems to me that it would be about someone that might still be able to be helped vs someone who is obviously beyond help and would be easy to figure out.

Now, I know that involving the government and common sense in the same breath aren't *usually* all that easy to figure out and might even result in a totally different conclusion.... ;-)

SWFD without a doubt!

There is no comparison between Police Call and the
SWFD. The update page that the SWFD mainatins is
extremely valuable as well.

Just in case anyone else is interested, there is apparently a lost student pilot on guard (121.5) attempting to contact Tucson approach. They are also trying to get communications established on 125.4 and 119.4.

I am unable to hear the a/c in trouble, but am copying the other a/c attempting to maintain communications.

I forgot to mention that the a/c in trouble is apparently approximately 40 miles or so SW of Tucson. One of the pilots attempting to help out was trying to get the student to turn towards the north/northeast but I am not getting much of anything now so I don't know if they had any luck or not.

About the only thing I would suggest for the Police Call book would be as a substitute for the `ol Sears Catalog for use behind the `ol half moon door our back. :) The SWFD wins hands down for accurate information on the usage of public safety radio in the Arizona teritory.

3636. Problem inputing Gilbert/Chandler Frequencies

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2002-10-31 04:31:14 UTC
From: interstate_air
Topic: 3636 Message: 3636

I have a Uniden BC245XLT Trunktracker II and want to monitor the Gilbert PD. I have found their frequencies via this group. Apparently they share a system with Chandler. The problem arises when I put them in a channel bank. My bank can hold up to 30 freq's, but the list I found had closer to 40 different frequencies for the system. Not sure what to do. Also, once the freq's are entered do they require the E1-10 setting or E2-800? Thanks in advance for any help.

3637. Trunked frequincies, fleet maps

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2002-10-31 04:54:43 UTC
From: watkd
Topic: 3637 Message: 3637

When you put trunked frequincies in a pro-93 do they have to be the first channels in a bank. Also with TEP I tried putting in the fleet map numbers it wont let me put them in using the afs format.

3638. DPS State Intermod

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2002-10-31 04:58:33 UTC
From: Dave
Topic: 3638 Message: 3638

Did anyone hear the intermod on DPS State here in Phoenix late this morning?

What was even more comical was listening to the tech at the site talk to another tech on how to check things on the machine. He sounded like he didn't know how to work on a repeater.

I thought the techs had their own frequency for this kind of talk.

I have an online EDACS calculator that you can use to convert the
EDACS format into decimal for programming your radio.

http://64.172.222.187/edacalc.php?convert_dec=1

Your probably including either input frequencies or frequencies from other sites. In either case you have too many frequencies for a Motorola Type II system. According to trunkedradio.net there are only 12 frequencies for the Chandler system.

http://www.trunkedradio.net/modules.php?name=TRSDB&sid=796

Since this is a Motorola Type II system you should set use the E2-800 setting when programming the system into your BC245XLT radio scanner.

I think I got it. The list I found only had 24 entries and was a E1-
P10. However after entering the freq. the scanner will keep stoping
on data channels almost like its not in trunk mode. I can only get
it to stop on the frequencies and not on the Talk Group ID's.

For starters, Gilbert PD is no longer on the system with Chandler. They are now on the up-and-coming City of Mesa system now.

I posted the new frequencies and talkgroups for Gilbert PD (on the Mesa system) to the Publication Updates page
http://www.scannerstuff.com/Publication%20Updates.htm

The password to log in can be found in your Southwest Frequency Directory 7 book, using the instructions on the above web page.

From: fyrfotog2@aol.com
Topic: 3644 Message: 3644

These INCREDIBLE bars are showing up on quite a few Salt River PD cars some Phoenix Police cars, also Phx Fire BC6, L22 and some of the other BC's rigs, along with what you mentioned John. As far as I know, no engines in Phoenix or any other FDs have these bars yet. IF they do, I have not seen them yet.

Apparently, there are more than just this 1 company that are making them from what I have been told by the Phoenix Fire apparatus Chief. I do not know if any other agencies are using other companies bars however.

Another note, Phoenix Fire has on order 22 American LaFrance Eagle pumpers with the option to add - on 38 more over the next 5 years.

From: fyrfotog2@aol.com
Topic: 3624 Message: 3645

Something I will add to this discussion on Code 3 and funeral processions.

If you have ever ridden on any Engine/Ladder/Rescue/BC etc etc etc in the Phoenix Fire Dept or happen to be near any when they are going Code3, when they are away from any traffic they will turn off their sirens, then turn them back on when they obviously approach traffic or an intersection.

I am not sure how many other fire agencies around Phoenix do this, but I have noticed that some trucks with Rural Metro here in Scottsdale are starting to do it when they NEVER used to do it even at 3am in the morning. They always told me that "we are responding to an emergency that requires us Code3 (lights & sirens) and we will respond that way". Soooo, I guess someone has decided to challenge that thought!!

Keep an eye out as you will be surprised at what you see!!!!!

=====
Great occasions do not make heroes or cowards; they simply unveil them to the eyes. Silently and imperceptibly, as we wake or sleep, we grow strong or we grow weak, and at last some crisis shows us what we have become.

Ask me tomorrow why what I predicted yesterday didn't happen today.

I have gone out to find myself. If I should get back before I return, please ask me to wait here.

Yeah it's a very small fire department located up in the Prescott National Forest, southeast of Prescott. Off Hwy69 east of Prescott (near the new Westcor Prescott Gateway Mall) is a road called Walker Road. Take it South about 7 miles and you roll in to the tiny unincorporated community.

They had been on simplex forever. Listed on Page 162 of SWFD-7 (http://www.scannerstuff.com/SWFD-7-AZ.htm)
But apparently they've now licensed a repeater frequency.

Looking at the apparatus list on Page 164 of SWFD, they have a good bit of equipment. An engine, a tanker, and several brush trucks.

The youth jumped on a cafeteria table at Marana High School, opened his jacket, displayed a belt with fake bombs, pulled out a broken BB pistol and said he would kill his fellow students.

The teen was on probation after conviction for possession of drug paraphernalia in a two-year-old Tucson police case.

He had a similar conviction in an April Pima County sheriff's case and a marijuana possession conviction in a March

He is a sophomore at the high school

No doubt about it this young adult has graduated and is now a career criminal .

Danny McLean

>PW WPWD527
>WALKER FIRE PROTECTION ASSOCIATION INC
>PRESCOTT, AZ

Walker is a township in the Prescott Natl Forest about 12 miles south of Hwy 69. The "HC" is the postal ser vice's "Highway Contract" designator, where they use contractors to deliver rural mail (unlike Rural Route, which is usually USPS employees) Used to be mostly vacation cabins but an increasing number of large full time homes lately.

The are licensed for 154.175 (according to Dan and his mighty book) although all I ever here is Whitman or some such from my QTH...but the do operate on business channels and 154.280, all simplex so you need to be close to hear them

They work extensively with the Prescott Nat lForest during fire season and have tankers and brush trucks....and run a few EMS calls as well.

Their "sister" fire districts are Spruce Mountain (never heard on the published freqs)and Groom Creek (154.130, very active) Groom Creek is dispatched by the Prescott Regional Fire Comm Ctr, the others are self dispatched (with an answering service paging the dept for calls!)

From: Ed Karsten
Topic: 3624 Message: 3656

Code 3 doesn't shorten your response time when there is no traffic, thusly, the lights aren't needed. It's safer to respond code 2 in light traffic, or no traffic. There are so many "needless" or "non-emergent" calls these days, that many of the Captains are responding code 2 anyhow, based on the information received from the caller. Mesa has been doing this for years, Phoenix is starting to follow suit. I don't know about other departments. Safety seems to be the primary concern when responding code 2 vs code 3.

Subject: [ArizonaScanner] RE: Right of way: Code 3 vs. Funeral procession

Something I will add to this discussion on Code 3 and funeral processions.

If you have ever ridden on any Engine/Ladder/Rescue/BC etc etc etc in the Phoenix Fire Dept or happen to be near any when they are going Code3, when they are away from any traffic they will turn off their sirens, then turn them back on when they obviously approach traffic or an intersection.

I am not sure how many other fire agencies around Phoenix do this, but I have noticed that some trucks with Rural Metro here in Scottsdale are starting to do it when they NEVER used to do it even at 3am in the morning. They always told me that "we are responding to an emergency that requires us Code3 (lights & sirens) and we will respond that way". Soooo, I guess someone has decided to challenge that thought!!

Keep an eye out as you will be surprised at what you see!!!!!

David

3658. Re: [ArizonaScanner] DPS State Intermod

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2002-11-03 07:37:56 UTC
From: walter.howard@juno.com
Topic: 3638 Message: 3658

Lets begin with the term "intermod".
It's multiple forms of interference that are caused either internally
or externally by radios NOT on the receiver's frequency.
And this was definitely ON frequency.

Second, it was Interagency (IARS). Both UHF and VHF.

Third, it was Maricopa County Wireless Group technicians. They
control the system and have radios on White Tanks and Thompson
Peak. They had configured their radios "strangely" and they weren't
playing nice in the system.

And, Yes, DPS has a channel just for our radio maintenance activities.
Not so sure about the county.

Walter Howard
TeleComm Supervisor
Arizona Dept. of Public Safety
"Courteous Vigilance"

Was at Gila River FD Station 429 on sunday. My BC friend there said they are to begin training and testing the beginning of their portion of the Phx 800mhz system either this monday or next monday.

Everyone I have talked to says very few are confident in the system.

Dave

Peoria PD has 3 black and white Crown Victoria's, two of which have the LED lightbar. Peoria also has at least one black and white Ford Expedition SUV with an LED lightbar. I confirmed this Saturday night after passing through an accident scene they were cleaning up at 75th Ave. and Northern Ave., and at a structure fire at 91st Ave. and Monroe Ave. a few minutes later.

GFD BC151 also responded to the structure fire. Needless to say, I got to see the LED's lit up. Really cool lights.

John H. Guetherman
Peoria, AZ.

Here's a photo of a CHP Camaro with low profile LED light bar. This
was taken at the Vandenberg Air Show this last weekend.

Another common three-letter acronym on BP is "OTM". Other Than Mexican. In Arizona, that usually means people from south of Mexico. It makes deportation more difficult than driving or sticking them on Justice-1 or Justice-2 at Williams Gateway airport, which I think still go only to MEX (Mexico City).

Dan

3668. RE: [DIGITAL-SCANNING] Uniden pushes dates back to January on both scanners

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2002-11-09 01:35:34 UTC
From: Dan Danz
Topic: 3668 Message: 3668

< Even bigger sigh, Harry >

But there's some joy -- the product page on their web site for the digital card has
a little gem: (http://www.uniden.com/product.cfm?product=BCI25D#, then push the magnifying glass above the line that says "Available in January")

With the BCi25D Digital Card inserted into either the BC785D or BC250D the user can monitor Conventional,
Trunked (analog control channel, 3600 Baud and
**> digital control channel, 9600 Baud)
and Mixed-Mode APCO 25 Systems

This is contrary to what people have been led to believe. Maybe there's hope for those of you who have systems with 9600-baud control channels.

Me, I'll be happy when I finally get something that scans our Hybrid Maricopa County (Phoenix) Motorola system that has a 3600-baud control channel because of lots analog radios but has digital (mostly non-encrypted) talkgroups for the Sheriff's Department.

3670. BNSF Police

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2002-11-09 03:02:27 UTC
From: John H. Guetherman
Topic: 3670 Message: 3670

Just wondering if anyone knows how active the BNSF police is in the Phoenix metro area, and what channels they use? The SWFD doesn't specify any designated channels. I'm only a mile or less from the tracks along Grand Ave., so if they happened to be active in Glendale/Peoria/Sun City/etc., I should be able to monitor them.

Also, I just read a thread on a Philadelphia group about Amtrak's TrackStar helo that patrols the Northeast Corridor. Do any of the railroads out here have their own helo's? Specifically BNSF?

I figured I'd try monitoring a new agency for a change.

John H. Guetherman
Peoria, AZ.

From: David French, N7FAN
Topic: 3670 Message: 3672

This is what I find in the FCC database for BNSF licenses in Maricopa County:

There's also a 900MHz license at MP189.1 for 911.5, but I don't know what it's for.

Callsign: KDG562
Licensee: The Burlington Northern and Santa Fe Railway Company
Radio Service: IG
Status: Active
Grant Date: 8/26/99
Expiration Date: 10/5/04
Location State: AZ
City: PHOENIX
Frequency Assigned
160.650
160.860
160.935
161.370

Possibly out-of-date info in an old database:
160.65 - Road Frequency, Sun City Eastward to downtown Phoenix
161.37 - Road Frequency, Alhambra to Sun City
160.01 - Maintenance of Way (unknown if still used)

Here is a site for another manufacturer of the LED lightbars. These appear to be the ones that the Californai Highway Patrol is purchasing.

http://www.code3pse.com/productdtl.asp?grp=cd3&familyid=18&id=131

3675. Re: BNSF RR Police

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2002-11-09 12:09:31 UTC
From: fyrfotog2@aol.com
Topic: 3675 Message: 3675

John and the group,

Being a pretty big railfan of the Santa Fe (NOT BNSF) I can tell you that in the past there were VERY FEW BNSF Special Agents assigned to this division of the BNSF. Believe it or not they used to have only 1 Special Agent assigned to the Needles - Winslow - Albuquerque - Phoenix area. I really have no idea how many there are now. I don't think there are more than 4 really.

They have been using a security company (rent a cop) for the last few years for sure in the Phoenix area to supplement them.

As far as RR Police helicopters, there are none in use by any railroad across the country that I have heard of. Please forward where you read about an Amtrak helo in the Northeast Corridor. I have a friend who is a special agent in Illinois that works for the Norfolk Southern (NS) that tells me a few railroads including the NS and Amtrak have K9's and bomb sniffing dogs. I know that NJ-Transit (commuter rail line) in Jersey has their own EMS units too.

As far as what freqs the BNSF Special Agents use here in the Phx area, in the past I have ALWAYS heard them on the regular RR frequencies for the specific area they are in but you really would not know by a specific call sign who they are. I am sure in those highly populated areas where the RR Police have a larger presence, they use the RR PD freq they are assigned, and I know some even have the local PD freqs in their radios and even the local law enforcement mutual aid freqs.

Hope that helps! I used to have several friends that worked for the Santa Fe including a few of the RR cops, but since the BN took over and it became the BNSF things are a lot different now, so I know very few people here in town.

Dave

Dave, I sent you the posts from the PhillyScanner group directly. I also just found on Amtrak's website, http://www.amtrak.com/ this statement: "Since September 11, Amtrak has been operating on its highest state of alert which includes increased police presence in stations, uniformed officers riding trains, frequent inspections of all Amtrak-owned properties, and increased helicopter patrols."

http://www.amtrak.com/press/atk20011108197.html

It doesn't specify who owns the helicopter, however.

I also found that there are 101 groups on Yahoo dealing in some way with Amtrak. http://groups.yahoo.com/search?query=amtrak

Spelling it as Amtrack, there is one more group

Good input John.
Funny thing is that in three years of listening to 160.935 (main dispatch) and maintenance (160.260) in the Flagstaff/Seligman corridor, I have only heard mention of RR cops when they have a train wreck.
Me thinks that the train rider cops are more of a preventative thing.
They have so much trackage at BNSF, that it would take an army to make the tracks 100% safe.

Currently, there are more derailment threats with broken rails, than terrorists.
The maint. crews are on call 24/7 and they always seem to get called out at night two or three times a week..... usually for broken rails up here, due to contraction/expansion and plain old wear and tear by 60++ daily freight trains that are really heavy.

I'll sure keep my ears peeled for talk of a chopper up here..... that could be extremely interesting.

BTW, the maint. guys patrol the tracks looking for problems two or three times daily.
Those poor guys have a tough job in the winter.

I tripped across this Trunking Net this morning while searching for something else! You folks know how that can happen!! That's why its so hard for a "non" web surfer to understand why it takes hours to do a 5 minute search!!! (; - (

Some good info here for the newbee and they even talk about other trunking systems in addition to Motorola. "Hear that you Phoenix folks", there are other companies out there doing trunking!!!

You may all know about this net but just in case.

August,

I maintain the Arizona section of that website, with exerpts from our Southwest Frequency Directory (http://WWW.SCANNERSTUFF.COM/SWFD-7-AZ.htm) hence the ads for SWFD on many of the pages. I also help when I can with updating the database information across the country from user submissions.

Although trunkedradio.net keeps a narrow focus (limited to trunked radio system information, no non-trunked systems, and no extra info like radio codes and units) it is by far the best nationwide resource available for nationwide trunking information, and is generally quite accurate.

Some of you may also find it interesting that trunkedradio.net is heavily relied upon by radio system managers for data on neighboring systems, ideas for how to layout their systems, etc.

WELL DAN isn't it a small world!!! Yes, I found several good things out there but I didn't have time to read I was supposed to be searching for another web site!!

Dan, I was looking for an article the other day and came up empty with reference to various trunking systems and there ability to survive terrorist type attacks or severe hard failures such as lightning taking out 2 of your 2 Trunking sites. In other words what does it take to knock out a Motorola system compared to GE/Err. system, etc. I only read a few quotes from the report but from what I read Mot was not doing so well, etc..

Have you read this report or article, whatever it was? I would sure like to get the details. They also tied it into the WTC attack!

Don,
Here is a start with City Freq. I have more detailed public service somewhere but can't seem to find it at this moment. This will keep you confused long enough while i locate it.

Looks like the MHO is low band 42 MHz?? And Jackson look like they too are 800 MHz crazy like Phoenix!!

I'll locate the other list but this one will show you the frequencies for Taco Bell and McDonalds so you can call ahead!! (; - Q

Jackson is on a two-site EDACS system for police, fire, and city services. Go to www.trunkedradio.net, click on TRS Database, and select Mississippi to see the systems, including Jackson.

Also, Jackson Int'l Airport has its own 5-frequency EDACS system as well, listed on there.

Dan and all,
I understand that there still exists, the long time Mississippi River HF communications system.

Do any of you have these HF frequencies???

Could be interesting, particularly in the winter, when there is ice to deal with.

BTW, years ago I went houseboating on the Missi. near Dubuque, IA.
While we were passing one little town in the early AM, our ears told us that there was a very loud garbage truck operating in the little town.

Suddenly, this bright orange, loud, and smoke spewing garbage truck came into sight, crashing and banging dumpsters.
I started to think about where I was living at the time, NYC (My old office was only two blocks form the WTC).
Exact same sounds.
However this garbage truck had a visual that has made me laugh, every time I think of it, for over twenty years now.
Written on the side, in hand painted three foot high green letters was this garbage company's slogan: SATISFACTION GUARANTEED, OR DOUBLE YOUR GARBAGE BACK!!

According to eBay, a perfectly functioning Pro-79 draws about $50. My guess is even if you found a repair facility (I don't know of one in Tucson, aside from letting a Radio Shack store mail it to Ft. Worth) the repair would cost at least that much.

If you want to spend a few more bucks and get a sweet new scanner (maybe treat yourself to an early Christmas present?), Radioshack.com shows the brand new Pro-95 as still on sale for $149 (down from $249). That baby has two lines of text tagging (wouldn't "TUCSON POLICE F1 SOUTH SIDE" look great on your handheld's screen as opposed to just "155.0100" !!??). It's got 1,000 channels and is a dual Trunk-Tracker as well (should you desire to scan Marana PD, or wander up to the Phoenix valley), plus it can be programmed using your PC and free software available on the net.

Were I not holding out for the $339 response from Uniden in a few months (BC250d, which also adds digital capabilities) I'd own a couple Pro-95's myself! $149 is a great price for those useful features, and everyone I know who owns a Pro-95 loves it. Oh by the way, according to Radioshack.com, that sale price on the new Pro-95 is the same price your Pro-79 is selling for new.

August;

From my perspective, I sincerely hope you
DON"T FIND A SINGLE WORD ON THAT SUBJECT!

That's like asking for the most vulnerable point on a building to
place explosives.

Well Dan,
I took your advice and bought the 95, downloaded the programing software, now i need the interface cable. Any ideas where I can find one?

Thanks
Greg

Most people I know with the Pro-95 bought their cable at www.pro95.com. $23 and free shipping. PC Programming is such a huge help, especially on scanners with alpha displays.

Dan

A reminder:

Our Southern Arizona Scanner get together is scheduled for this
Saturday(November 16)
at 1700 local time at the Coco's on Campbell Ave back room.

Hope to see you all there.

Kelly N7YGX

August,
Look at Washington DC Fire Dept, June 2002. Happened to them. They reverted to cell phones. Then what happens if the cell sites go down??? Does amateur radio come to mind? Does anyone remenber SIMPLEX operation?

Dan, I was looking for an article the other day and came up empty with reference to various trunking systems and there ability to survive terrorist type attacks or severe hard failures such as lightning taking out 2 of your 2 Trunking sites. In other words what does it take to knock out a Motorola system compared to GE/Err. system, etc. I only read a few quotes from the report but from what I read Mot was not doing so well, etc..

Ed,
One major advantage of the CELL SITE is even in case of a total failure the way the sites are clustered in a "Honey Comb" manner you most likely will be able to still reach one or more of the other sites. This is of course one of the advantages and the basic structure of the cellular network system. I live in northern AZ and the cell sites are not as clustered here in as they are in the Phoenix area for example and I can still here my site hand me off several times, back and forth, as I drive up the highway to Las Vegas and go up and down the hills.

It is my theory, and we have a good, in fact a very good, working example of this through Nextel. I believe we are just a short way away from the day when your local Police, Fire department or Paramedic service NO LONGER will go through the expense of installing and maintaining their own radio system. I believe they will just equip themselves with only handheld or mobiles and handheld units that work into a Nextel type Universal Wireless Network! (UWN) If you visualize a nationwide honeycomb network of "Nextel Type" sites all you will need is the proper radio equipment with your assigned Digital Code and you can go any where and keep in contact with your base station. You will also be able to contact other units in your service and even make landline calls if required. This system will also work for large scale, small scale business and personal services as well. I know of dozens of smaller businesses that have either dropped using their own radio system or have gone directly to cellphone service.

This is where I think our Land Mobile Radio systems are going! Can you think of a much more reliable communications network than 850 MHz Cellphone? How many lives were saved in NYC on 911 because of cell phone use?? We will never know but a good number I feel. A UHf or VHF cellphone service may even perform better with fewer sites???

As far as simplex use goes I was VERY Surprised to view the FDNY's new 460 MHz radio channel plan <http://www.n2nov.net/new_fdny.html> and see the dozens of allocations for simplex use!!! Take a look and see. There are all narrow channel splits many I'm sure are low power (2 watt) frequencies.

I wrote a few lines just last week about this simplex or should I say Lack of Simplex operations thinking when I mentioned that RF Backup systems MUST be in place for our communications systems. If your operating on 42 or 155 MHz your chances of working car to car, in an emergency, are rather good in most circumstances under reasonable conditions BUT at 850 MHz it's a different thing.

I'm an old hard nose and will go as far as saying we need a backup for the backup even if it is a cellphone "calling tree" to backup the 44 MHz or 154 MHz car to car or car to station simplex network..

To close with a cute radio story on this very subject I was in the Columbus, OH area many years ago on a sales call along with the local GE sales crew and the comm chief and I got on the very subject of "backup" for their brand new UHF repeater system being installed. He too was a believer in backup! Oh Boy, was he ever!!

He went on to explain that their existing VHF system with some changes would stay in place! His secondary backup was a series of simplex VHF radio sites all over the county who's control points fed two different and "Not connected in Parallel" command sites.

Jokingly I said to him "But that's ONLY two backup systems, what will you do if they all go down"?? He smiled and said come with me!! We went to his office where he pointed to an OLD 2 channel Motorola Motran bolted to the side of his desk with large telephone batteries lining the wall behind it. That's my last hope he said, with a big grin on his face as we all fell into his trap on commitment to backup systems'! "That's Old 42.20 he said, that low band system will cover the whole county with the addition of two well placed tech's sitting in their vans on top of two hill sites he called 'Smoke-1 and Smoke-2'"!!

At that very moment 5 men cracked a big smile as though they had rehearsed it for weeks broke into a chorus of "On Top Of Old Smokee"!!

Now that's backup to a fault!!

I know of dozens of smaller businesses that have either dropped using their own radio system or have gone directly to cellphone service."

August, its a great concept, and in reality, it is in place and in daily use in and around Europe (can you say TETRA), but thanks to the free enterprise system, and soo many "poor police/fire departments", I feel something like this, if it ever happens, will be a very, very long time off!!
I can only speak from my own humble experiances, but there are too many police/fire depts that are always screaming "no money, no money" and for the most part they seem to have their own little "radio kingdoms" that they wont/cant abandon for something greater and more usefull.... I can hear it now, "Been doing it this way for 25+ years now, and it still works! Dont need anything new or better!!"
And for another humble observation, it's sad but very often true, communications is rarely on the front burner (sometimes it aint even on the stove!) until someone gets hurt, and then there is alot of finger pointing and mad dashes, and sadly, mostly its in the wrong directions! Its very difficult to make the "bean counters" and the "nay" sayers understand that the public safety folks only have a few tools they carry with them,a badge, a gun or a hose, a flashlight, and a radio, and the radio is the only tool that can call in for back-up when they need it!
Alright, off of my soap box for now....

Yes, provided they don't switch on encryption. As long as they use only plain old digital modulation (as they were a year or two ago), the scanner will work great.

I've been hearing surveillance type comms the past couple of nights.
Probably not authorized on the channel.

Tuesday night, either I was hearing a repeater outside of the
immediate Phoenix metro area, or the officers weren't getting into
the repeater very well. Real noisey signal. Wednesday night, it was a
solid signal.

Not sure of the decoding, but, some of them will have an address you can mail the transmitter back too.

Saves a few tax dollars here and there.

Pay attention to the IARS channels during the holiday season.
East Valley DUI Task Force will be using that for their details.

As to the surveillance comms, I think that Phoenix PD detectives
still don't understand that channel "8" doesn't belong to them.

But please do not forget there is an FCC rule perhaps 20 years old now that allows any law enforcement agency to use most any frequency for low power surveillance use! I remember when I was back in CA we would setup surveillance on the city water dept. frequency, the city road maintenance frequency, the animal control frequency because these were not being used at night and would often use the repeater input frequency without a tone because no one would look for them there and at that time most repeater input frequencies were not of much interest and were usually not found on any frequency list.

Walter would certainly know best but this would cover them from a radio legal point of view .

Right, that's what makes it a "digital scanner". Without the board, it
is just a really cool analog scanner that is "digital ready".

But that rule only covers simplex operation under 2 watts.
And, not that it applies in this case, but the police agency
can only use frequencies in a band that they are already
licensed in.

The main reason is it is illegal to listen to any encrypted transmissions!!

Does that answer the question for you?

If encrypted transmissions become the norm, perhaps over the next 10
years as a guess, then scanning will be a story you will tell starting
out with . . . . . "I remember in the Good Old Days . . . . . .>"!!!

Given that scanner listeners in the 80's wondered what would happen in the 90's when everything is encrypted, I'm not real worried. :) Yeah, some places will use it, for some things. But encryption costs (more) money. Tax money for public safety radios come by some communities easier than others, so those may encrypt. I'm putting my chips on the bet that says it will be a LONG, LONG time before encryption becomes any kind of standard.

Today, the buzzword is "Interoperability". After 9/11 especially, everyone is more concerned with being able to talk to other agencies than keeping others from hearing you... On the local level at least. Encryption only puts a bigger wall in front of what is already a really difficult place to get to... Seamless interoperability.

The City of Philadelphia is very anti-scanner. The PFD is using encryption on their new fireground tac channels, believe it or not. Dispatch is in the clear, and their response/command-to-alarm channels are clear, but their actual tac channels are encrypted.

(They're dispatched on one talkgroup, respond and give info to alarm on one of two other talkgroups, North or South, and operate on one of several more North Tac or South Tac talkgroups with the new trunked system.)

The PD is also using at least some encrypted talkgroups. Not sure if the normal patrol stuff is yet. They're still in the process of switching over, from what I understand.

Of course, the biggest question is, what the heck does the Philadelphia FD have to "hide", that they need to encrypt their fireground channels for?

I have to ask that same question John!!

To a limited degree I could even understand encrypted radio channels in the area of law enforcement where the officers plans to over take a criminal or the position of another officer could be over heard and become dangerous information in the criminals hands. Or the press gets bits and pieces of information. and writes their own version of what's going down, etc.!

With reference to a fire ground situation it's hard to understand what's so secret about the Captain calling for another 200 foot, 3 inch line to be pulled!! Or to pull some personnel out or send some in!!

The sad truth is it is going to take more and more NYC and Philadelphia type near death (Let's pray no more serious than that) incidents to prove there is a time and place for super high tech and some times when your much safer using a single 2 watt ht in the clear!

If I were trapped, perhaps injured, in a burning building and put out a call for help I want the whole damn world to hear me!!

Just my thought on this subject after reading several incident reports, predominately Fire Dept. incidents, with reference to radio communications problems with many of the new communications systems on the air.

Heh faith has been restored a little I guess. From what I have
been reading about michigan it seems like there a little anti-scanner
theyve had digital radios for a long time. You have a permit to
operate a scanner, and you cant have a scanner in a car. Also im not
trying to be mean or anything but why the heck would the philly fire
department need encryption, they dont do anything to important. Well
I dont think Tucson is going to have to worry about encryption. I
hear that the police are going to use a 700mhz digial trunked radio
system. I dont know about the fire department. anyone hear
otherwise.

Wronged Side of the Tracks?
'Railfans' Complain of Police Scrutiny in Terror Era

http://www.washingtonpost.com/wp-dyn/articles/A56984-2002Nov14.html

Thanks to Dave for passing along this article from a couple days ago on the Washington Post.

The section most alarming to me?

Some railfans are advising their brothers to remain undercover as much as possible, not looking like railfans, keeping the car out of sight, taking one photo and moving to another location. This is becoming known as "guerrilla railfanning."
"You mean like Poland in the 1960s?" said Nils Huxtable, a Canadian railfan who has traveled the world for decades taking pictures of steam locomotives, writing books and producing train calendars. In Eastern Europe years ago, he dodged the secret police to take forbidden railroad pictures.

it showed the TUCSON POLICE DEPARTEMENT moving to 800mhz Motorola
type 2 Astro Digital type APOC-25 also in the southwest frequency
directory page 133 it shows the same.

Well if you can get more accurate information from other than the cheif let me know. He came to my school and I asked him. He told me over the next 5 years they would be changing to a 700mhz digital trunked radio system. But then again the cheif didnt seem to know a whole lot about radios. But then again it says he was the comm. capt.

Also, Let's not forget that Nextel would like to move everyone to 900 MHz and pay for the move so they can have the whole 800 MHz band!! hey already posted a $25 Million bond to secure their promise to pay the bill for everyone to move again! So who knows who will be where, when, depending on what Nextel can get the votes for.

It is sort of like the squatters getting moved back out by the big cattle companies back about 125 years ago!!

I just had a great thought how to take care of the CB problem. Give 27 to 28 MHz to Nextel BUT only if they fill it up with high power paging systems every 10 KHz!!!

3721. TPD radio change

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2002-11-17 22:02:12 UTC
From: watkd
Topic: 3719 Message: 3721

OK I looked at trunkedradio.net I see it clear as day. However I looked on motorola.com at the news section and I dont see squat about that. Are they getting used radio systems. Also I did a callsign search I see that the callsign is under the communications division activated 4/20/2000 and expires 4/20/2005. But the frequencys fall under the national public safety plan. I guess that does not mean anything.

3722. RE: [ArizonaScanner] TPD radio change

The City of Tucson has already licensed a whole fleet of 800 MHz frequencies, but who knows what they will do. I'm sure they could still change to 700 MHz. So while that is still possible, the plan has been an APCO-25 800 system for several years now.

Oh and by the way... In practice, just about anyone has more accuarate information about future radio systems than the chief of a large department. That's why he's got "little guys" in charge of details. Cause all he knows his some time down the road, someone is going to hand him a new radio, and it will be "that new system we've been hearing about". Remember that this is the same chief who thought "digital" and "encrypted" meant exactly the same thing a couple years ago (according to a source of mine who attended a meeting with him). I'm not being critical. I'm just pointing out that the "chief" doesn't usually know the intricate details of new radio systems before, during, or after their implementation. Doesn't mean they won't in the end be right there on 700 MHz like he though. But the fact that the chief said so doesn't mean they will, either.

Neither SWFD nor trunkedradio.net can be absolute gospel on future systems either, because the plans change, and change often. I know there's a few people on the list who are on Tucson's committees for the new radio system, and hopefully one or more of them will fill us in here on the details if the plans have changed from an APCO-25 800 Mhz system.

You won't see anything on Motorola's website until it's a booked order,
deposit in hand.

And, regarding 700 MHz, there isn't hardware available or even a band
plan.
Earliest would be 3-5 years down the road.
(If we can get rid of the new Channel 64 in Phoenix!!!!)

Probably not. If "they" come for our scanners, "they" will have chosen for us.

A Ben Franklin quote is highly relevant. "They that can give up essential liberty to obtain a little temporary safety deserve neither liberty nor safety." Franklin also said "distrust and caution are the parents of security". Who'd have thought a guy who died in 1790 would have so much to say about 21st century terrorist threats and hobbyists? :)

Are you sure that 9Edward units are on scene?

Arson investigators are 9David7# units.

I am not aware of 9Edward units. There ARE Edward#
units, but they are bomb squad officers.

I was out on the SVP this morning (to watch the Leonids meteor shower), which comes off of Bell Road west of the Happy Trails resort in Surprise, and goes west and then south to I-10, on the west side of the White Tanks mountains. I believe it continues a little farther south of the Interstate.

I noticed that the Parkway has mile markers along it's route. MM134 is just west of Happy Trails Blvd./175th Ave., and descends from there.

I thought only numbered highways had mile markers? Does the Parkway have a numerical designation? If MM134 is it's end, (I didn't see any others east of there), where is it's start?

Also, where does Surprise's city limits end and Buckeye's city limits begin along that roadway?

Subject: [ArizonaScanner] Sun Valley Parkway

I was out on the SVP this morning (to watch the Leonids meteor
shower), which comes off of Bell Road west of the Happy Trails resort
in Surprise, and goes west and then south to I-10, on the west side
of the White Tanks mountains. I believe it continues a little farther
south of the Interstate.

I noticed that the Parkway has mile markers along it's route. MM134
is just west of Happy Trails Blvd./175th Ave., and descends from
there.

I thought only numbered highways had mile markers? Does the Parkway
have a numerical designation? If MM134 is it's end, (I didn't see any
others east of there), where is it's start?

Also, where does Surprise's city limits end and Buckeye's city
limits begin along that roadway?

No, I thought that for a second when I read it, but it's not. 303 is the Estrella Freeway and parallels Cotton Lane. The Sun Valley Parkway is MUCH further west (back side of White Tank Mtn Regional Park. Bell Roud way out west turns in to Sun Valley Parkway, goes way West, and then wraps toward the South around the park down to I-10. Sun Valley hits I-10 at the exit for Palo Verde.

Several years ago, there was talk of eventually having to build a Loop 404 and even a Loop 505 in the future as the Valley expanded. Perhaps the SVP will become one of those?

SW 93 was enroute to a call, when an object was thrown at their unit at 91st and Peoria Ave's. The object shattered their windshield. Heard this in the last 15-20 minutes on AMT/SWA ch. 16, 462.350. The District 11 supervisor, and Peoria PD are enroute.

No mention of injuries to the crew. According to PD, the crew didn't see where it came from, but the call was put it out as a 415J by PD, Juveniles Disturbing.

Cave Creek is patrolled by the Maricopa County Sheriff's Office, which is on an 800 MHz ASTRO Digital system. Fire protection is provided by Rural/Metro Fire Department. Frequencies and channels/talkgroups for both agencies can be found in the excellent Southwest Frequency Directory 7.

--- In ArizonaScanner@y..., "watkd" <watkd@y...> wrote:
> What is the purpose of the gateway radio system. Why cant units just switch the frequencies?

The agencies in Pima County who use a VHF radio system can switch to a specific VHF channel. The agencies in Pima County who use a UHF radio system can switch to a specific UHF channel. The agencies in Pima County who use an 800 MHz radio system can switch to a specific 800 MHz channel. All 3 of those channels are linked together, and a transmission on any one of them will be heard on all 3 of them in order to better facilitate interagency mutual-aid communications.

This way, an agency doesn't have to purchase radio equipment for any other frequency band. They can stay in the band they are already using, just adding the one particular channel in that band that is used by the Gateway System.

I don't have my SWFD in front of me, so I don't know what frequencies are used in Pima County. 155.475 and 460.375 in Maricopa County are linked, although 155.475 isn't a repeater. I believe all 3 channels in Pima County are repeatered.

3751. RE: [ArizonaScanner] Gateway Radio System

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2002-11-22 04:59:46 UTC
From: Dan Rollman
Topic: 3749 Message: 3751

It's an interagency system for police, fire, and EMS agencies to talk to each other during significant events. The reason for it is that some agencies are on VHF (150 MHz, like Tucson Police, Northwest Fire, Rural/Metro), some are on UHF (450 MHz, like Tucson Fire, Drexel Heights FD, UofA PD), and some are on 800 MHz (like Pima County SO, Marana PD, Tucson Airport police and fire).

Generally, public safety radios only operate on one of those three bands. The Gateway system is a network of repeaters on Tucson Mountain that ties a VHF, UHF, and 800 MHz channel all together so that regardless of what band an agency uses, they can communicate with any other public safety agency regardless of band. They're all linked.

Units can't just switch frequencies, because two-way radios (most) only operate on one band, and can't be programmed with frequencies in a different band.

AR155 went in service yesterday (11/21), AR301 has been running their butts off. Other cities that have AR vans on the west side are Avondale (AR172) and Buckeye Valley (AR324). And on the east side there's CARE8 in Chandler, CARE7 in Tempe, and let's not forget Sun Lakes AR231. Seems like I'm missing one, and I'm sure someone will correct me if I am.

The Phoenix AR program will be taking over old Station 29 soon. they will base at least one van out of there, as well as a reserve. I don't know what other plans are in store for old 29 or the AR program.

The air units have incredibly expensive radios ($25K) each and multiples
of them in each aircraft.

Each of the agencies in the example use a COMPLETELY DIFFERENT
BAND of frequencies.
Kind of like trying to receive an AM station on your FM radio or TV.

In some areas, DPS units have a High Band radio installed in addition to
their
DPS UHF radio so they can talk to the S.O. or ADOT. This doesn't come
cheap, and takes up a bunch of space in the console in the car, and trunk

space to mount the radio itself, and an extra antenna on either the trunk
or roof.

Systems like the InterAgency or Gateway make better sense than to add
more
radios to the cruisers. A number of agencies are acquiring "mobile
patches", that
let radios be tied together for tactical/detail situations.

All of these topics are part of the "interoperability" issue between
agencies/services.

It ain't easy, and requires thought , planning, and practice to make it
all work to
the best advantage of the public.

I could go on for a whole lot longer, but I'll save that for another
forum.

Does anybody know that Phoenix moved Station 19? I was at the airport Wednesday and all the bay doors have been removed.

I talked to a neighbor who works for the city aviation dept as a engineer.

There are plans to build another arm on the A-concourse at terminal 4 and the station was in the way, so they built them a new one. It's on the south side of Terminal 3 about where the south parking garage exit is. It's actually 2 buildings now.

There are plans to build another station on the northside again in the general area of the old station after the new concourse is built.

There are also plans to build another station south of the south runway but there is no timetalbe for it. Besides there is no money for any of them.

> Ed/N7VEX...

That's exactly what I'm trying to figure out myself. The only possible explanation that I can think of, is the SVP is (or was considered as) part of a future Loop 404 or Loop 505 that will eventually encirle the Valley much as the Loop 101 does now. (Although the 101 isn't a full loop, it's more of a upside-down U.) I recall comments made by someone (ADOT? MCDOT?) probably in the newspaper from the early '90's about these "outer-outer loops" becoming a possible necessity as the Valley expanded outward.

Anybody here from ADOT or MCDOT who may be able to answer that?

I've got a map from 1990 of the ADOT and MAG Regional Freeway/Expressway Plan. Anyone remember the proposed Paradise Freeway?

From: Dan Rollman
Topic: 3760 Message: 3763

I can answer both your Sta 19 and 29 emails at once.

The new station 29 is on the SW corner of 40th St & Air Lane. They will have easy access directly on to Taxiway A and out to the north into the city. This puts it on the NE corner of the airport. Combine that with Sta 19's move toward the SW side of the station and they have two, better positioned, stations rather than 1 right in the middle.

Speaking of new PFD stations, if any of you have not yet seen the new Station 43 under construction down near I-10 and Chandler Blvd., check out

http://www.iefgroup.com/projects/police.html

Click on the first image on that page to see information about the massive FS43.
25,000 square feet, 2 floors, $4 million bucks and six long bays is huge even by Phoenix standards. :)

Subject: [ArizonaScanner] Station 19

Does anybody know that Phoenix moved Station 19? I was at the airport Wednesday and all the bay doors have been removed.

I talked to a neighbor who works for the city aviation dept as a engineer.

There are plans to build another arm on the A-concourse at terminal 4 and the station was in the way, so they built them a new one. It's on the south side of Terminal 3 about where the south parking garage exit is. It's actually 2 buildings now.

There are plans to build another station on the northside again in the general area of the old station after the new concourse is built.

There are also plans to build another station south of the south runway but there is no timetalbe for it. Besides there is no money for any of them.

remember that the SVP is a private road, but MCSO is patrolling it. Last I heard it was built by the major land owners out there, because the county would not. I have no clue as to the mile markers labeling

Information I have is that it is. Southwest Frequency Directory books will be for sale there as usual, and in the past it has required nothing more than showing up and paying for a spot as you drive in (bring your own table).

3770. CB radios in DPS vehicles

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2002-11-25 00:49:33 UTC
From: Stephen
Topic: 3770 Message: 3770

Walter,
I would assume that DPS has CB radios installed. What kind of radio is being installed?

Steve

3771. Pinal County Sheriffs Office Radio Codes

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2002-11-25 05:55:55 UTC
From: jgbdps
Topic: 3771 Message: 3771

Does anyone know the radio codes for the Pinal County Sheriffs Office or where I can find them? Or is PCSO codes the same as MCSO or Pima County Sheriffs Office codes?

Thanks,
Joshua

3772. RE: [ArizonaScanner] FIRST RESPONDER : GETING ANENCIESS TAKLKI NG

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2002-11-25 15:29:23 UTC
From: Lindsey, Mike
Topic: 3772 Message: 3772

We built a trailer here in Tempe which does many of the things the Raytheon unit does but custom tailored to Public Safety needs. We have complete interoperability with all of the public safety frequencies. We can connect multiple radios on multiple frequencies together on a net or multiple nets. We put in Iridium Satcom phone service. We put in a relative new product that brings 4 Satcom lines into the trailer but brings the connection out of the unit as plain old telephone service. What we did then was tie in a 4 line long range phone PBX to the Satcom unit. This now gives us the ability to use Satcom service inside of a building. The long range portable phones have an advertised range of 8.8 miles but that would probably be in the wheat fields of Kansas. We have used them 2 miles away from the trailer and they did work good. These phones also have 2-way radio ability and text messaging. We then tied the Satcom/long range phone system in to the interoperability platform and can now patch the Satcom to the radio net. This gives a Fire or Police Chief the ability to get on the radio net and speak with the on scene people from anywhere in the world. We also added a 2 way data Satcom unit for internet access at download speeds close to T-1 speed. We then dumped this into a wireless LAN system for on scene wireless data to the incident commanders. We added a 800mhz conventional repeater to be used in Tempe if our trunking system goes away. The most interesting part of this project is we built this in our shop at 1/8th the cost of the Raytheon unit and it has tons more capacity. We will be using this system for East Valley DUI taskforce which starts on Dec 11th. We will be tying in multiple departments on multiple radio frequencies onto our H Traffic talkgroup and will be dispatching from Tempe dispatch. Should be very interesting for monitoring over the holidays. We will also be working with ASU on the next Cardinal game to do some dry run testing with multiple agencies in Sun Devil Stadium in preparation for the Fiesta Bowl. We have also been requested to take this to the Governors DUI Task Force press conference tomorrow. Keep an eye on the news we might get a chance to show it off to the press. If anyone would like pictures e-mail me off line and I will mail some to you.

Only in select vehicles.

Each district buys their own. Last I knew, it was a midrange Cobra.

Or the officer can have his personal one installed (with the LT's OK).

MT Police Have Nothing To Hide
Posted on 11/15/2002 12:07 EST

The owner of MyMontana.com recently added a police scanner feed to
his web site and has noticed a large increase in site traffic due to
the new addition. So much so that a local reporter wrote an article
about it and asked police their thoughts on the issue. Kudos to the
police Lieutenant who answered so very intelligently!

http://www.everyweek.com/News/News.asp?no=2846

Surf and scan
by Jed Gottlieb

Are the cops in the donuts shops?

The Zen koan first pondered by Bangles singer Susanna Hoffs is now
being asked by MyMontana.com.

The Missoula-based Web site with Montana news, weather and trivia,
began providing live scanner broadcasts in mid-October for
Missoula's Police, Sheriff and Fire departments along with
Highway Patrol and other emergency services. The scanner feature is
heavily hyped throughout the site□multiple times on the home page
and on inside pages□even teasing surfers with the immortal donut
shop question....

Check the link to read the full article. And what the Missoula PD
spokesperson had to say about scanners!

I have a pic or two of a DPS crusier that I took at the "open house" of the 101 freeway out here on the west side which shows a CB antenna on it, and I have heard on either Metro Central or Metro West one time a dispatcher and an officer comment about an officer using a CB to talk with truckers, I think during a pursuit, or while looking for a particular vehicle.

FWIW.

At least a few have SSB units. I have heard DPS several
times on CB USB 35 and elsewhere on the CB band.

Funny things you hear when monitoring frequencies: A DPS unit
at Sunset Point (on I17) with a dead car using a personal ham
radio to talk to dispatch using an autopatch. About a year
ago.

;)

channel 8 meaning 450-8?? What is that used for then??
walter.howard@... wrote:Pay attention to the IARS channels during the holiday season.
East Valley DUI Task Force will be using that for their details.

As to the surveillance comms, I think that Phoenix PD detectives
still don't understand that channel "8" doesn't belong to them.

3784. Re: 460.375 active again

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2002-11-28 09:07:38 UTC
From: John H. Guetherman
Topic: 3700 Message: 3784

Interagency mutual-aid communications. So an officer from one agency can talk to another officer from another agency directly, without having to relay through the dispatchers.

At least that's the theory. Seems most agencies prefer the longer officer-to-dispatcher-to-dispatcher-to-officer route. That not only takes longer, it also increases the likelihood of a mis-communication occuring. But the agencies don't seem willing to allow their officers to go to a channel that the agency doesn't normally monitor.

At least that seems to be the feeling from my monitoring experience here in the Valley over the years. I could be wrong.

155.475 simplex is linked with the 460.375 repeater in the Phoenix area.

Does anyone have any scanner freq that there are using with WIN93
that they would share with me.

Kevin

3787. Goverment HF Useage in Arizona

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2002-11-30 08:49:20 UTC
From: John H. Guetherman
Topic: 3787 Message: 3787

I was just wondering if there were any HF frequencies worth monitoring in Arizona? There's a USMC(?) building at about 51st Ave. and McDowell/I-10, I think it is, with some HF antennas on it's roof. (Somewhere down there, can't quite recall.)

Army and Air National Guard?

Luke and Davis-Monthan AFB's?

Ft. Huachuca?

Yuma MCAS/Army Proving Grounds?

Does Arizona have a license for HF frequencies to be used in disasters like California, and other states do?

I don't have any HF capability. Just curious. Maybe other folk do.

John H. Guetherman
Peoria, AZ.

I can't really help with your other questions, but the building you are speaking of (I think) says on the front that it is a Naval Reserve building (which could probably also house USMC functions) and is located just south of the I-10 freeway at 35th Ave. I go by it several times a day usually and sometimes see them with the concrete road barriers in place at the entrance during exercises and alerts.

John

That's probably it. South of the freeway at 35th. Ok, I could have sworn it was on the north side, and a little farther west. But I'll take your word for it. :-)

Just to clarify my post, I'm looking for transmissions that originate within Arizona. (To keep it on topic for an Arizona group.) I got some info that included out of state stuff, so I wanted to be sure I was clear about looking for in-state transmitters.

Thanks.

John

3791. Mall Posse Patrols

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2002-12-01 19:44:26 UTC
From: Dave
Topic: 3791 Message: 3791

Does anyone know what frequencies they are using for the Mall Posse Patrols this year?

I know last year they used the old Chan 4 because MCSO still had the channel and the posses couldn't afford the new radios. Also some of the posses, like jeeps, used Chan 8 simplex and the Surprise Posse used a commercial frequency.

Soetimes it's interesting to listen to the traffic when you are at the mall.

Date: 2002-12-02 03:06:01 UTC
From: Andrew D. Clark
Topic: 3791 Message: 3793

Not sure which one for mall patrol, but most details operate on
"Sheriff," "Special Detail D," or "Special Detail E."

-----Original Message-----

Subject: [ArizonaScanner] Mall Posse Patrols

Does anyone know what frequencies they are using for the Mall Posse
Patrols this year?

I know last year they used the old Chan 4 because MCSO still had the
channel and the posses couldn't afford the new radios. Also some of
the posses, like jeeps, used Chan 8 simplex and the Surprise Posse
used a commercial frequency.

Soetimes it's interesting to listen to the traffic when you are at
the mall.

I don't know how you ever heard them on "Metro Central" (old "District
5").
(Unless you happened to hear it while it was cross-patched.)
That area has been on "Metro West" (old "District 14", 460.300) ever
since
ADOT opened it.

Also check out Page 34 in SWFD-7
(http://www.scannerstuff.com/SWFD-7-AZ.htm). There's a big chart on that
page with every freeway, highway, and milepost range in the state
referenced to what DPS district patrols that stretch.

For example, that chart shows that Metro West covers A101 from mp 0 to
23.4 (West side), then Metro Central has it from 23.4 to 34.5 (up
North), then Metro East has it from 34.5 to 60.1 (East Valley).

John,
I beleive the building your are referring to is the Navy and Marine Reserve building at 35th & I-10.
When I was a Radioman in the Reserves there we had some radio equiment there but we never once used them
"John H. Guetherman" <jhguetherman@...> wrote:I was just wondering if there were any HF frequencies worth
monitoring in Arizona? There's a USMC(?) building at about 51st Ave.
and McDowell/I-10, I think it is, with some HF antennas on it's roof.
(Somewhere down there, can't quite recall.)

Army and Air National Guard?

Luke and Davis-Monthan AFB's?

Ft. Huachuca?

Yuma MCAS/Army Proving Grounds?

Does Arizona have a license for HF frequencies to be used in
disasters like California, and other states do?

I don't have any HF capability. Just curious. Maybe other folk do.

John H. Guetherman
Peoria, AZ.

Date: 2002-12-03 07:02:50 UTC
From: Jim Myers
Topic: 3799 Message: 3800

460.575 is for the repeater that is setup on a water tower at Camino De Oeste and Valencia Road.
This repeater provides radio coverage for the CAP water treatment facility at Ajo Highway and Tucson Estates Parkway, since the reuglar TFD system does not provide coverage out there. It is used ONLY for incidents at the CAP water treatment facility.

Is it true that phoenix purposely bought digital radio equipment becase "they didnt want to shut out the wonderful citizens that help them."

3804. RE: [ArizonaScanner] PPD vs. scanners

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2002-12-03 13:05:54 UTC
From: Dan Rollman
Topic: 3803 Message: 3804

I've seen that quote on some websites, and I think it is a little exaggerated. None the less, I get the impression that Phoenix is less "anti-scanner" than a lot of places. There's several City of Phoenix radio guys on this list, hopefully they'll fill us in.

Regardless, I don't think going digital is a good way to KEEP from "shutting out" citizens (those who don't buy new scanners ARE shut out!). But electing not to use encryption on most channels is a good way to not shut people out.

Dan

There was an artcle in the Arizona Republic maybe a year ago. It quoted Chief Hurt something to the extent that even though PPD was going to the new system, they would not put it in digitl mode because they get too much good information from scanner listeners.

Seems to me there was a discussion on here that the APCO 25 is only digital.

Ooops! A great sales job by Motorola.

3808. RE: [ArizonaScanner] Re: PPD vs. scanners

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2002-12-03 22:27:39 UTC
From: Dan Rollman
Topic: 3803 Message: 3808

Dave,

You're right! If it uses a 9600 baud control channel (which is a "true" APCO-25 system) there is no such thing as analog. All talkgroups must be digital only, and analog-only radios have no access to the system.

If it uses a 3600 baud control channel (like the County system) it can have both analog and digital talkgroups, and agencies could convert from analog to digital and back if necessary.

When all is said and done, my money is on the bet that says it's a 9600-baud, all digital system. Of course all kinds of hell is breaking loose in other parts of the country as tax revenues fall short and radio system deployments are getting delayed (again) all over the place... Who knows what will happen. (Sidenote: Given that Tucson is delaying construction of badly-needed fire stations and putting hiring freezes in place, I'm betting Tucson's new digital system won't be fully deployed real soon!)

BTW, maybe Chief Hurt meant "encryption" when he said "digital mode" in that article. Remember, in the late 80's and early 90's when "trunking" was all the rage, a lot of non-radio-types (i.e. chiefs and their indians on the street... But not in the radio shop) thought "trunking" was synonymous with "encryption". I think the same thing is happening now with the word "digital".

Subject: RE: [ArizonaScanner] Station 19

I can answer both your Sta 19 and 29 emails at once.

The new station 29 is on the SW corner of 40th St & Air Lane. They will have easy access directly on to Taxiway A and out to the north into the city. This puts it on the NE corner of the airport. Combine that with Sta 19's move toward the SW side of the station and they have two, better positioned, stations rather than 1 right in the middle.

Speaking of new PFD stations, if any of you have not yet seen the new Station 43 under construction down near I-10 and Chandler Blvd., check out

http://www.iefgroup.com/projects/police.html

Click on the first image on that page to see information about the massive FS43. 25,000 square feet, 2 floors, $4 million bucks and six long bays is huge even by Phoenix standards. :)

Subject: [ArizonaScanner] Station 19

Does anybody know that Phoenix moved Station 19? I was at the airport Wednesday and all the bay doors have been removed.

I talked to a neighbor who works for the city aviation dept as a engineer.

There are plans to build another arm on the A-concourse at terminal 4 and the station was in the way, so they built them a new one. It's on the south side of Terminal 3 about where the south parking garage

exit is. It's actually 2 buildings now.

There are plans to build another station on the northside again in the general area of the old station after the new concourse is built.

There are also plans to build another station south of the south runway but there is no timetalbe for it. Besides there is no money for any of them.

3810. Mall Possee Patrols

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2002-12-04 03:57:28 UTC
From: Dave
Topic: 3810 Message: 3810

Hey, here is something original. I can answer my own question.

I talked to a deputy from MCSO Enforcement Support and asked about the mall patrols. He was pretty informative since we know some people in common.

Seems that MCSO has bought some inexpensive analog radios for use on detials and the possies are assigned the radios for the mall patrol. They only have the special detail channels in them and no patrol channels since they are in digital. He didn't tell me which channels they are using.

Seems they discovered that the possie's became incommunicato after the change to the new system. Duh!

I'm a little dense on some of this but does this mean that a regular 800 trunking radio can be used for the analog channels so those guys can still buy their own radios?

3811. RE: [ArizonaScanner] Mall Possee Patrols

The radios that Enforcement Support owns are 800 MHz MTS2000 Model 2s loaded with Special Detail D, Special Detail E, Sheriff, and Talkaround Analog-1. I think they may originally have been jail/courts radios. Main channel for Mall Patrol is Special Detail E, with Special Detail D being used for car-to-car. A lot of the traffic is handled on the mall security channels, though. As far as buying their own radios, I don't know of any Posse member or reserve deputy that has bought his or her own analog radio. Quite a few, however, have purchased their own digital radios, which also function in analog mode.

3812. APCO-25

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2002-12-05 19:07:18 UTC
From: Dave
Topic: 3389 Message: 3812

I've been following the BC-250D group and there has been lots of discussion about the 3600 and 9600 baud cotrol channels.

It seems that the new scanners will only track 3600 but will monitor 9600. But, there has been alot of conversation as to whom is really using or going to use 9600.

Does anybody know if the new system Phoenix is planning is really a 9600 baud system?

Also, someone posted over there that Glendale has pushed back their testing until at least July.

> Also, someone posted over there that Glendale has pushed back their
> testing until at least July.

I'm not sure about the testing, . . . but I do know that the new radios we were to have received in December for the various Public Works departments have been postponed till at least July. P.D. could very well receive their radios whenever they were scheduled. I believe I read in the SWFD that Phoenix was going to Motorola Astro Digital, (unsure as to whether its 3600 or 9600 baud?), . . . so you'd think it would benefit the surrounding agencies to eventually be on the same system and possibly reduce costs? Given the fact that the new BC250D will only do 3600 baud, . . . I'm hoping its not 9600 for a while. :)

3814. Northwest Fire-Rescue

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2002-12-06 01:38:43 UTC
From: cfcdmc
Topic: 3814 Message: 3814

I happened to read an article today in the Northwest explorer regarding the Northwest Fire-Rescue. Included were a list of stations and company assignments. My question concerns the two person rescue units and the type of apparatus they utilize. Are they the Pierce Pumpers I've seen in my travels, or are they mini-pumpers or possibly similar to the squads used in L.A.County?
I noticed a new Pierce engine quartered at Station 33 on my last visit, however the article only lists a hazmat unit and rescue for that location.
Thanks,
Charlie

3815. scanners and sensors

when you hear border patrol talking about the sensors
that they are monitoring, what does the first number
mean? for example: 212-1 for 3.....where is 212?
and all the other numbers, where are they located?
thanks

Anyone hear that pursuit that occured last night with dps it started at about 114am. It lasted for about 20 or more minutes. There were two subjects and they both got away. Tucson ranger was launched and the survey plane was assisting them. I only caught half the pursuit. Did anyone else catch this.

Subject: US Scan. from dispatch news hound

Baltimore (Md.) officials met with FCC staff to discuss the 800 MHz
'Consensus Proposal,' and told them the city's public safety radio system
does <not> suffer from interference, that it cannot be retuned to other
frequencies, and the city doesn't have the money to replace the gear if the
FCC orders frequency reassignments. The city operates a 9-site, 28-repeater
Motorola system. The city officials stressed interference reduction
solutions, rather than a complete reassignment in the band. "The private
benefit that returning would bring to some parties should not influence the
Commission's analysis of what is essential a vital public safety issue,"
the
group stated.

The state of Florida has updated their M/A-Com state-wide radio Web site,
noting that they continue to install radios (over 850 mobile radios
installed
so far), will schedule train-the-trainer classes in January, and are
continuing to build new dispatch centers or renovate existing ones
throughout
the state. For the straight scoop, surf:

Subject: US Scan. more 800 mhz woes

The Honolulu Police Department had to go to its backup system Monday while they tried to determine what troubled its radio system.
The HPD radio system is reported to be back working in digital mode Monday evening. At around midday, police said they had to go a backup system.
"Today, the problem was with the city-owned microwave link that connects a lot of our radio repeaters to the station," HPD Assistant Chief Robert Prasser said. "When the officers transmit on 800 megahertz it goes to a repeater and comes to the ion by microwave link. That's what we had interference with today."

The exact locations are most likely classified. Only the Border Patrol, and perhaps Customs and affiliated agencies know exactly where they're at. But, they're strung along the border, to catch folks moving through the desert in an attempt to enter into the country illegally. Whether they're undocumented immigrants or drug smugglers or terrorists.

As you may know, 212 is the sensor, -1 indicates the direction of travel (I don't know what number corresponds to what direction, or how that is even determined), and for 3 indicates the number of persons it detected.

I suppose it would also detect wildlife, so I'm sure they get false readings due to animals as well.

From: Dan Rollman
Topic: 3814 Message: 3819

Charlie,

Here's the scoop on NWFD:

"Rescues" are run by the fire district and manned with FF's. These are basically "first responder" medical units, to save miles on the engines in areas that have extremely high ratios of medical to fire calls, and to just plain get there faster. R30 and R33 are big box-type ambulance looking rescues, and can (and will) transport serious patients when Southwest Ambulance calls back to say their nearest ambulance is 25 minutes away. R31 is currently a Chevy Suburban packed with ALS gear. Anyone whose driven around 31's area knows it's mostly trailer parks and tight private alleys, so the idea to run through it in a Suburban is actually pretty slick. It's also a nice idea because the 2 FF's on R31 take Utility-31 on all fire calls, so you've only dropped the manning on a Suburban and not a shiny ambulance when that happens. On a fire in 31's area, they park U31 at the scene and the two guys on it join the 4 from L31 (or LT31, an engine) to create a six-man ladder (or engine) company and get to work. But Northwest is preparing to order some more of the box-type Rescues, and R31 would likely get one of those (another would probably go to 34).

"Medics" are run by Southwest Ambulance and manned by whoever they stick on them. M30, M31, and M33 are at those respective stations. M32 is behind a strip-mall at Ina and Camino Martin (between Thornydale and I-10). The Medics housed in NW stations may have to leave for Northwest to continue adding firefighters and companies to their stations like they have been. There's a class of 21 firefighters in the academy right now that will make ALL Northwest engines and ladders minimum 4-man units. ALL NW apparatus (engines, ladders, and rescues) are always staffed ALS (with at least one paramedic, often two, and ALS equipment).

Someday, NW would really like to see a Rural/Metro lawyer loose a round, and let them end up with a CON (Certificate of Necessity) to do their own ambulance transports. At that time, the Rescues they already have (and another order of them) would just start doing the transports.

That article said a "HazMat company" is at 33. Really, that's the HazMat truck and the Pierce Saber you saw there. The Saber is E33. LT31 and E37 are identical, brand new Sabers.

So, the only update I know of that needs to be made to Page 135 of SWFD-7 (http://www.scannerstuff.com/SWFD-7-AZ.htm) for NWFD is to add "R33" at Station 33, and on Page 138 add that a "Full Alarm Assignment" now also includes a Rescue. Full Alarm is now 3 Engines, L31, BC31, a Medic, U31, and optionally a water tender or two as needed. That's at

least 21 personnel on the initial dispatch.

Dan

Dave,

"KS" is shorthand for Knutson (Memorial) Station. That's the Headquarters for Metro Central, Metro East, and the Motors. It's at 2610 S. 16th St. in Phoenix. If you're interested in the other station locations and names, check out Page 32 in SWFD-7 (http://www.scannerstuff.com/SWFD-7-AZ.htm). It's got them all.

Went to the Mesa hamfest yesterday, and received my copy of the latest directory. Thank you for including my friend, Thom Kelley and me, Robert Homuth, in the contributors list.

We have a website, <www.azrepeaters.net>, dedicated to amateur radio and public safety that we hope you will find useful.

I usually carry a small Alinco DJ-S11T handi-talkie modified to receive 144-174 MHz NBFM. It fits well in a cordless phone belt holder, and I use it with an earphone. Most people think its a cellphone or portable stereo, so it attracts little undesired notice.

Keep up the excellent work, Dan!

3824. TRS help

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2002-12-09 10:34:27 UTC
From: watkd <watkd@yahoo.com>
Topic: 3824 Message: 3824

Does anyone know how to put in the TEP fleetmaps on a pro-93 scanner. I tried using the ones out of the scanner directory. But the AFS format doesnt work, when the TEP folks talk they have a five-digit ID number. Do you have to put this in order and what do the ID's stand for.

Thanks

3825. Magazine article/photos Rodeo-Chediski fire

Yahoo group: ArizonaScanner (1999 — 2002)

In the Nov-Dec '02 issue of "Weatherwise" magazine, which you can buy at Border's Books and Music stores in the Science/Communications section of the magazine rack, is an article with several pictures taken by Warren Faidley of the Rodeo-Chediski fire.

Warren Faidley is know by severe weather buffs for his weather photos. (http://weatherstock.com) He now also has fire photos for sale. (http://www.firestock.com)

Also in that issue, is an article on building your own weather satellite recieving station.

Thanks for the info Dan. That certainly clarifies things. Back here in the Boston area, many of the departments south of big city actually run 1500 gpm pumpers that are designated as rescues. In addition to running as an engine company, they generally carry a vast array of support equipment and extrication gear.

3828. Anchorage Alaska Frequencies??

Yahoo group: ArizonaScanner (1999 — 2002)

From: W8MIA <ahoecker@citlink.net>
Topic: 3828 Message: 3828

Hello Dan or anyone else that may have a clue.

My wife and her son are leaving to go on a 1 month Christmas
trip to Anchorage tomorrow morning and I went to my "Police Call" CD
to print out a list for her son who is a real scanner buff and it
seems Police Call forgot our 49th and 50th States in their listing.
Boy was I surprised! Lucky they didn't stop at #47!!! (: -))

I am now looking for a listing of some (all) of the Public Service
frequencies in the Anchorage area. YES. I know this is a Little Bit
out of our area but . . . . They will be living and staying in
the city most of the time at her brothers house about 5 minutes
away from the airport. With that in mind the airport frequencies may
also be of interest. If anyone has any info I would like to print he
out a list tonight if I can find out where to look!
Any help will be appreciated!

Thanks much,
August

Don't hold your breath that SW will be there very long. I think (and this is just speculation on my part) that Buckeye City wants to put their own ambulance in service, so by contracting with SW, they take business away from Buckeye Valley, in hopes that Buckeye Valley has to decommission an ambulance or two, and then they can get their own CON from DHS. It's long and complicated, but I think that's the bottom line. I don't think it will work, and I can't see why Buckeye has to be this way. If there's a problem with the service Buckeye Valley provides, work it out or turn 'em in to DHS. I've been past station 311 (Buckeye) a couple times and they have what appears to be an ambulance in the back of the bay. You do the math!

We had our new interoperability trailer platform working last night for DUI Task Force. We had Tempe trunk talkgroup H (traffic) tied into Mesa Channel 8 and also into the UHF interagency frequency. We had some challenges with delays caused by the trunk system but by around 11pm we seemed to have them worked out. The idea of interoperability is not new but being able to actually make it happen is. The technology is there but believe me that is the easy part. Working with multiple agencies on multiple frequencies and putting them all together on one radio net has some real challenges. We will continue to work through them during the task force.

Well being as I have lived in Buckeye for about 10 years and monitoring the local agencies for about as long I am familiar with the entire episode. I seem to recall that Buckeye Valley has in fact used Southwest or Rural Metro (one in the same but different rigs) on numerous occasions for EMS assignments within the Town. Either all of the Fire Dist's rescues were out on other assignments or they didn't have the manpower to staff another rescue sitting at the station. So a substitute department was called to respond and provide transport wasting valuable time since they were coming from Goodyear/Avondale or even farther. I understand that the Fire Dist only has a few people on duty for each shift to man the apparatus at Station 324 and the rest relies on the Reserves (volunteers) to respond when called out. The Town chose to reorganize its own Fire Dept and has such been transformed from a volunteer dept into a full time 24/7 dept. I can only assume that since the Town cannot provide EMS transport service they wish to have at least 1 rescue in town dedicated for such purposes and not just hoping that there isn't a big accident on I-10 in Tonopah using all of the Fire Dist's resources leaving nothing available for use elsewhere.

Just read an article in one of the local papers here in Buckeye stating
that as of Jan 1st Southwest Ambulance will begin providing EMS
transports within the Town of Buckeye. Currently service is provided by
the Buckeye Valley Fire Dist. as they have done for many years. I know
SW95 is in Tolleson and 97 and 98 are in the Goodyear/Avondale area,
possibly 99 in Buckeye?

I wouldn't expect that soon. DHS has to approve any ambulance contracts, and I would expect that one to be challenged.

S.E. Valley DUI Taskforce is apparently linking to 460.375 this evening. Dispatch, (which I believed ID'ed earlier as "Tempe Base")

just advised all units to wait a second or two after keying their radio before talking as the first part of a transmission is getting cut off.

7:40pm Wednesday. It seems some of my recent posts on two other groups aren't going through very quickly.

For those wondering, when Daisy Mtn fire takes over from RMFD E840 on 1/1/03,
that will become Daisy Mtn E142 in the same location until they build their
permanent station in about 2 years.

Subject: Re: SWAmb service in Buckeye

Don't hold your breath that SW will be there very long. I think (and this is just speculation on my part) that Buckeye City wants to put their own ambulance in service, so by contracting with SW, they take business away from Buckeye Valley, in hopes that Buckeye Valley has to decommission an ambulance or two, and then they can get their own CON from DHS. It's long and complicated, but I think that's the bottom line. I don't think it will work, and I can't see why Buckeye has to be this way. If there's a problem with the service Buckeye Valley provides, work it out or turn 'em in to DHS. I've been past station 311 (Buckeye) a couple times and they have what appears to be an ambulance in the back of the bay. You do the math!

Subject: RE: Southeast Valley DUI Taskforce

We had our new interoperability trailer platform working last night for DUI
Task Force. We had Tempe trunk talkgroup H (traffic) tied into Mesa Channel
8 and also into the UHF interagency frequency. We had some challenges with
delays caused by the trunk system but by around 11pm we seemed to have them
worked out. The idea of interoperability is not new but being able to
actually make it happen is. The technology is there but believe me that is
the easy part. Working with multiple agencies on multiple frequencies and
putting them all together on one radio net has some real challenges. We
will continue to work through them during the task force.

Hello,

Yes, it is true that Daisy Mtn will take over Anthem. Basically Anthem said Rural Metro will no longer provide services to Anthem starting 1/1/03. Anthem gave the residents a chance to vote on having Daisy Mtn provide services - but they had no other choice but to goto Daisy Mtn since there are no other services available. Rural Metro never places a rescue in Anthem, so Daisy Mtn would do all rescue calls - which could have been a main factor to keep everything with 1 agency. A few years ago Dell Webb donated B145 to Daisy Mtn, then when Anthem was built Rural Metro was providing services. Now all dispatch will be on Fire 1 with response on Fire 10.

The latest SWFD lists them on 151.955.
That's also "purple" dot.
I see one of their cars on I17 some mornings and it has a 40"
whip on the trunk (usually indicative of Hi-Band.)
I've got that in my scanning portable, but have yet to hear any
activity I could attribute to them.

BC111 is alive and well, sorta. The Laveen Chief is still the Laveen chief. I don't know off the top of my head what his Car number is, or if he's still part of the Laveen Fire District, or if he was absorbed into the Phoenix organization, but he's still around, and will be for some time to come, from what I understand. Laveen was not annexed into the City of Phoenix, so it's technically not City down there, but E58 is contracted from the City. I don't know how all that works, but at least there's a fire truck down there.

Here's the story on Laveen.

On April 29th 2002, the operations of the Laveen Fire District on the southwest side of Phoenix were turned over to the Phoenix Fire Department due to lack of funding (citizens unable & didn't want to pay for the fire district). The Laveen Fire District ad the community of Laveen still exists with Phoenix providing fire and medical services under contract and the formation of Phoenix Fire Station 58. The new Phoenix-Laveen Fire District as it is now called encompasses Phoenix stations 22, 34, 39 and 58.

The District is just like the other Phx fire Districts (east, west, south, and North) meaning there is a district commander that oversees several stations. Hoot Gibson the former Laveen Chief and the former Laveen FFs are all now part of the Phoenix Fire Dept with the FFs going through an abbreviated Phx academy and being dispersed into the Phx fire dept with none of them really working exclusively at station 58.

There is an Engine, brush truck (former Br22) and a most unusual tanker that was built from a ladder truck.

Thanks Dave.

Is the brush truck the Unimog that BR22 used to run? I think BR33 also had a Unimog. I recall reading about them in one of my dad's old "Firehouse" magazines.

(He was a firepolice officer with a volunteer company in our township just outside Philly from '77 to '84. Firepolice did crowd and traffic control at fire and accident scenes so that the local police didn't have to expend the manpower. They also worked the parades, 4th of July fireworks, etc. They had state police authority on-scene when paged out, although most weren't armed. At least not in the suburbs. The rural units, who may be the only authority on-scene, may have had armed officers.)

Here's a link for info on ALF's newer Unimog design..
http://www.americanlafrance.com/Products/Wildland/Unimog/

By the way, that Unimog was given (for a time) to AJFD as a trial/demo type deal.
http://www.ajnews.com/Archivesfire_district_gets_free_experime.htm

http://www.angelfire.com/az2/chucksfirepics2/ApacheJunctionFire.html

I guess ALF was running a special: "Buy 2 new ALF Engines (E261, E262) and a Ladder (L263), get a free Unimog!" Sure beats the old "free six inch sub when you buy a footlong and a 32 ounce drink". :-)

Dan

Subject: [ArizonaScanner] Re: Unimog brush trucks

Thanks, Dave. I did get to see BR33 one time in the late 80's, as we passed by it out and about on the road. Maybe I'll get over to AJ one of these days to see theirs.

John

John,
Where r u from outside of Philly?
I was born and raised in Hatboro PA. You know where that is?
"John H. Guetherman <jhguetherman@...>" <jhguetherman@...> wrote:Thanks Dave.

Is the brush truck the Unimog that BR22 used to run? I think BR33
also had a Unimog. I recall reading about them in one of my dad's
old "Firehouse" magazines.

(He was a firepolice officer with a volunteer company in our
township just outside Philly from '77 to '84. Firepolice did crowd
and traffic control at fire and accident scenes so that the local
police didn't have to expend the manpower. They also worked the
parades, 4th of July fireworks, etc. They had state police authority
on-scene when paged out, although most weren't armed. At least not in
the suburbs. The rural units, who may be the only authority on-scene,
may have had armed officers.)

> Here's the story on Laveen.
>
> On April 29th 2002, the operations of the Laveen Fire District on
the southwest side of Phoenix were turned over to the Phoenix Fire
Department due to lack of funding (citizens unable & didn't want to
pay for the fire district). The Laveen Fire District ad the community
of Laveen still exists with Phoenix providing fire and medical
services under contract and the formation of Phoenix Fire Station 58.
The new Phoenix-Laveen Fire District as it is now called encompasses
Phoenix stations 22, 34, 39 and 58.
>
> The District is just like the other Phx fire Districts (east, west,
south, and North) meaning there is a district commander that oversees
several stations. Hoot Gibson the former Laveen Chief and the former
Laveen FFs are all now part of the Phoenix Fire Dept with the FFs
going through an abbreviated Phx academy and being dispersed into the
Phx fire dept with none of them really working exclusively at station
58.
>
> There is an Engine, brush truck (former Br22) and a most unusual
tanker that was built from a ladder truck.

Dan,

You are correct about AJ being given the Unimog. In fact, its been there for about 2 years and has served at some of the biggest fire in Ariz and the southwest. I was told that ALF will be taking it back soon.

Currently its kept at their Annex (as they call it) near Sta263.

Dave

From: John H. Guetherman <jhguetherman@yahoo.c
Topic: 3864 Message: 3864

Apparently, GFD BC 151's former Chevy Suburban is now Medic 157. I saw it Monday morning up by Thunderbird Samaritan Hospital. It currently has a simple magnetic sign on the second set of doors with MEDIC 157 on it.

BC 151 is now running a Ford F-250 SuperDuty crewcab with a camper shell over the bed. It has the LED lightbar.

There is at least one other Ford crewcab pickup without the camper shell or the LED lightbar, but I don't know it's designation. And a pickup with a stake-bed on it, unknown use or designation, if any.

The former HazMat truck, a pickup cab-and-chassis with a commercial body is also still in use, but I don't know for what. I've seen it in the parking lot of Station 151 within the past week. (For what it's worth, Peoria had borrowed it for awhile back in the late '80's and used it as their "Rescue 91", when their normal R91, a GMC mini-pumper, was damaged. I recall seeing it at Peoria high school one day.)

I saw this on a full-size Hummer Monday morning at 91st and Grand Ave's, getting on northbound AZ 101. White vehicle, red and blue light bar across the full width of the roof, and that name on the sides. Diamondback had the baseball team colors, and Tactical was in black underneath it.

Anybody have any idea who/what they are?

John H. Guetherman
Peoria, AZ.

Who is using the old MCSO channels now that are using a trunked system? My 2002 edition of Police Call still has all the old standard fregs. listed. After punched them in my old desk top all I got was alot of medical stuff!

Sounds like you need an accurate book! Those frequencies have been in use by Rural/Metro (Southwest Ambulance) for some time now. Check out page 74 in the Southwest Frequency Directory 7th Edition Arizona (http://www.scannerstuff.com/SWFD-7-AZ.htm), and even more updated info on those frequencies in the SWFD Update (http://www.scannerstuff.com/Publication%20Updates.htm).

Check out http://www.scannerstuff.com/SWFD-7-AZ.htm
You can order it right online from there, and pay no sales tax. Also click on "view samples" toward the top left of that page, if you are interested to see how the info and layout are different from what you might be used to.

You can also go to http://www.scannerstuff.com/Stores.htm for a list of local stores in Arizona that sell the book.

Once you get your copy of the book, you'll have the username and password for free access to periodic updates online as well. You can also see the past updates, including the one with the newer Southwest Ambulance info.

3876. Where the H*** is Gilbert and Scottsdale!

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2002-12-18 03:23:32 UTC
From: Michael <michaelachavez@netscape.net>
Topic: 3876 Message: 3876

I have been told that Gilbert switched from Chandler's to Mesa's trunk system. After I entered just Mesa'a fregs. into it's own bank I'm not picking up anything. When I first set up me new scanner (new to trunk scanners, just bought my first one, a Pro-95) I had all the trunk systems in one bank. I was picking up Gilbert, Chandler and Tempe as well as Scottsdale. Now that I have placed them in their own banks, I still get Chandelr and Tempe but I no longer receive any Gilbert or Scottsdale transissions. Are they both on the Maricopa Analog system? (type I or II?)

Last Saturday of each month at the Fudruckers
on Highland, just East of the Squaw Peak Parkway,
from 6:00 to 8:00 pm. Next get together should be
on the 28th. I'm sure there will be someone there to
solve the mystery on your 2067. Dave

Michael,
You will find Scottsdale on the maricopa system, . . fleet map E1-P10
The latest edition of SWFD, #7, shows Gilbert to be on Chandlers system,
which is a motorola type II 800 (E2) I've never programmed Gilbert
or
Chandler. I can confirm the Scottsdale though, as I have it along with
Surprise.

3880. Anyone listen to Tucson Electric Power Corp. Need TRS help

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2002-12-18 05:44:03 UTC
From: watkd <watkd@yahoo.com>
Topic: 3880 Message: 3880

Is there anyone out there that can help me. I tried putting the fleetmaps in my pro-93 scanner from the directory but it seems that the scanner doesnt take that kind of format (ex. transmission line maint. 000-3). This scanner takes a five digit id and I dont know how to put that in. Anyone out there that knows how to do that.

Some old info I have shows the Fountain Hills Sheriff's Posse on 155.550 and 155.580 simplex. Are they still there?

(Hmmm, FCC records show 155.550 as one of the WPPC461 Maricopa County Community College PD repeater output frequencies, and as an input to a WPMG482 Ft. McDowell repeater [FD simplex in the SWFD7]. Litchfield Park has 155.580 simplex licensed under WNRB982.)

Also, Sun Lakes Posse was on 155.295 simplex. Are they still there? (AirEvac has the only FCC license for the frequency in Maricopa County.)

I may have answered my own questions on those two above. "No."

The Sun City Posse is on 853.9875, coventional repeater. I keep them in my PRO-43. Also, if the SC Posse is Station 380, why do they have unit numbers in the 560's, I believe it is? Why not unit numbers in the 380's, to coincide with District 3 numbering? Lastly, what is the D.O.? Sounds like a supervisor position.

Nah, Fountain Hills Marshal is on the County TRS, and other people snatched their old frequencies up a long time ago (as you found). They're on Page 69 in the book. TG 7920, 7952, 7984, etc. 155.550 repeater is shown, on page 73, for Paradise Valley Community College. I'm making myself a note right now to add that and 155.970 (colleges security) to the "Schools" section with the rest of the operations frequencies. That's awful hard to find if you have to look both in the Public Safety section and the Schools section to find operations AND security frequencies for a community college... I'll fix that.

Dan

3883. RE: [ArizonaScanner] Where the H*** is Gilbert and Scottsdale!

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2002-12-18 13:27:52 UTC
From: Dan Rollman
Topic: 3876 Message: 3883

Michael and Dave,

Gilbert switched to the new Mesa system just this past summer, just after the SWFD-7 was printed. The updated information for Gilbert is on the Scannerstuff publication updates page: http://www.scannerstuff.com/Publication%20Updates.htm

By the way, I think the Maricopa County system is now a straight Type II system. I haven't seen or heard of any valid Type I talkgroups on there in a while. Anyone know differently? Speaking of Fountain Hills Marshal, they were in a type I block for the longest time, and they are now type II. If I'm correct, just use Type II for Maricopa County programming and make it easier on yourself.

Also, remember that frequencies on various county sites changed all around when Scottsdale was incorporated into the system, so make sure you are using an updated list of frequencies for them. Most of the stuff spread around on the usual frequency websites has the outdated info. And Scottsdale's talkgroups all changed with the switch, so if you try to listen to Scottsdale's old talkgroups, but on the county system, you'll hear the Elections Commission and crap like that. :)

Dan

Michael,
You will find Scottsdale on the maricopa system, . . fleet map
E1-P10
The latest edition of SWFD, #7, shows Gilbert to be on Chandlers

system,
which is a motorola type II 800 (E2) I've never programmed
Gilbert
or
Chandler. I can confirm the Scottsdale though, as I have it along
with Surprise.
Dave

3884. RE: [ArizonaScanner] programming Tempe into pro 2067

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2002-12-18 13:31:49 UTC
From: Dan Rollman
Topic: 3874 Message: 3884

A Type II system, like Tempe, doesn't require a fleetmap. So if your scanner is still wanting one, it is probably still set as Type I, which won't work.

My suggestion is clear that bank out entirely (putting 0.0 in each channel) and start again from the top, following your instructions step by step and using the data from SWFD7.

To confirm whether you are getting the system at all, take it out of trunk mode and just scan the frequencies the old fashioned way and make sure you can pick up both the control channel (chain saw noise) and some voice traffic. That will verify that you are within range. If you are not finding those, in conventional mode, then you are out of range or have an antenna issue.

From: Dan Rollman
Topic: 3880 Message: 3885

I think you're talking about a decimal ID, like "33616" which is Ch A for Tempe PD. A straight 2-5 digit numeric ID is for a Type II system. Tucson Electric Power is Type I, not Type II. You need to set the "fleet map" in the scanner. That's E1-P1, or "Preset-1" in Uniden scanners. If your Radio Shack scanner doesn't do those Preset fleetmaps (I think some of them don't) then check out http://www.scannerstuff.com/Fleet%20map.htm

That will show you the fleet maps for each individual block in a certain preset. Since TEP is Preset-1, you can look on that page and see what Preset-1 is if manually entered block by block. You've got to get this fleetmap properly set before it will accept the Type I talkgroups (like 000-3).

I know, I know, it's a pain in the a**. But once you've got it set up, it's done. I have listened to the TEP Type I system and it works great, once programmed properly. There's some good stuff on there when the storms roll in and the lights go dark.

I'd also recommend http://groups.yahoo.com/group/PRO-93_95/

That's another Yahoo!Group, dedicated to your scanner model! Those guys can help you with highly model-specific programming problems.

I punched in the Mesa numbers and nothing.
However I was sent this

867.9750
868.2250
868.4750

These are the only control frequencies listed for Mesa Site 1 Primary.
Site 2 Thompson Peak, Site 3 Simulcast and Site 4 South Mtn - Phx do
not list any control channels. You may need to program all of their
frequencies and sort out the controls that way, unless someone in your
area has already done that.

Frank

The above freequncies worked and are asigned to Phoenix according to
trunkscanner.com and the 2002 ed of PC. Hve they been given to Mesa?

From: John H. Guetherman <jhguetherman@yahoo.c
Topic: 3888 Message: 3888

I saw one of their rigs this afternoon at 51st and Thunderbird, east bound. (I was at Carl's Jr.) They had a phone number on their side, but without an area code. 445-3811.

I know there's a Lifeline Air Medical helicopter, does anybody know of a ground ambulance service as well?

They had one whip antenna on the roof, and a short black "tube" as well. Maybe about 6" in height.

John

Phoenix Fire dispatches for themselves, Glendale, Peoria, Sun City, El Mirage, Surprise, Sun City West, Tolleson, Avondale, Goodyear, Buckeye (Town), Buckeye Valley, Gila Bend Ambulance, Daisy Mtn. (New River), Tempe, Guadalupe, Chandler, and Sun Lakes. (Laveen Fire District is now the Phoenix/Laveen Fire District.) They use VHF conventional.

Mesa dispatches for themselves, Gilbert, and Apache Junction. They use VHF conventional.

Rural/Metro has Scottsdale, Carefree/Cave Creek, Fountain Hills, Rio Verde, Paradise Valley, Litchfield Park, and county areas in the East and West Valley. They use VHF conventional.

The Salt River Pima-Maricopa, Gila River, Ft. McDowell, Gila Bend, Black Canyon City, Tonopah, Harquahalla Valley, and Palo Verde Nuclear Generating Station fire departments/districts, who all follow the apparatus numbering system used in the metro area, are self-dispatched, or by their police departments. Salt River and Gila River are UHF conventional by their PD's. The rest are VHF conventional.

None are 800 MHz trunked, yet. Phoenix and Mesa are supposed to go that way, but it's unknown exactly when.

Check out www.scannerstuff.com, and look for the nearest retailer to you who carries the Southwest Frequency Directory 7, or order online.

John H. Guetherman
Peoria, AZ.

This is a temporary trunked radio system for Gilbert Police only.
Eventually (early 2003?) the City of Mesa will be on the same
digital system as the City of Phoenix. Here are the correct
frequencies for this temporary trunked radio system.

867.3375
867.65
867.975
868.225
868.475

3897. City of Tucson digital system?

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2002-12-21 02:00:06 UTC
From: Dan Rollman
Topic: 3876 Message: 3897

Having read a couple of updated filings written by the City of Tucson to the FCC, I think it is safe to say at this point that the future City of Tucson 800 MHz digital system is a LONG way off. It appears the most optimistic updated timeline doesn't have radio subscriber units beginning to come on line until November, 2005.

I think their line "Due to recent events, the city has reevaluated the overall project scope" sums it up best. They go on to discuss fiscal problems, failure to acquire "partners" to help with the system, etc.

I guess analog scanners are going to be all you need in Tucson for quite a few years after all!

Dan

The control channel is a frequency that is dedicated to traffic control on the system. All radios interact with this digital channel to know which frequency the controller is assigning the conversation to. It's a lot more complex than that but that's the easy quick explaination. The control channel is only on one frequency however some radio systems will change the frequency that is used as the control channel to spread out the work load on equipment. For indepth information on trunked and digital radio I'd suggest checking out www.trunkedradio.net

P.S. Jim Walls has written an in depth article on how a Motorola Smartzone system works. This article will give you a bit longer explaination to this question.

3900. Motorola Smartzone in Tuscon?

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2002-12-21 04:51:55 UTC
From: FLANO
Topic: 3876 Message: 3900

Speaking of Smartzone, I believe I stumbled upon one while searching. The control channel is fixed on 864.45mhz. My PRO-95 id's it as a control frequency, but I've not see any group activity on it. It sounds different from the normal 800mhz control signal. I've downloaded a wav file that was published elsewhere.

Can anyone in Tucson confirm this? Who is this if it is a smartzone system? And, of course, any hints on how to decode it?

Thanks,
John
SE of Tucson

p.s. Tracy, thanks for the URL on Smartzone.

Your probably hearing WPMC221 which is an electric utility with a
transmitter on Mt Lemon.

861.45 MHz FB2C 100 Watts 20K0F9W 0.0 1 0 1
862.45 MHz FB2C 100 Watts 20K0F9W 0.0 1 0 2
863.45 MHz FB2C 100 Watts 20K0F9W 0.0 1 0 3
864.45 MHz FB2C 100 Watts 20K0F9W 0.0 1 0 4
865.45 MHz FB2C 100 Watts 20K0F9W 0.0 1 0 5

3907. new fire group

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2002-12-23 02:29:35 UTC
From: captainbiddle <captainbiddle@yahoo.com>
Topic: 3907 Message: 3907

hey im scott biddle i have created a new fire radio group for the
western states the title may not say it but it is for the western u.s
we cover everything from frequencies to incident to units being
dispatched to the incident
so stop on by and take a look if you wish too
the address is
http://groups.yahoo.com/group/north_nevada_norcal_fire_radio_center/
thanks for your time
captain biddle
happy holidays

3908. Cell phone use safety tips

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2002-12-24 11:24:14 UTC
From: John H. Guetherman <jhguetherman@yahoo.c
Topic: 3908 Message: 3908

Reposted from SoCalScan, with permission.

Do you have a wireless (cellular) phone? Are you giving one as a gift this holiday season?

Did you know that if a wireless phone keypad is accidentally bumped - or if a certain key is pressed on the keypad - it could dial the 9-1-1 emergency system without you knowing? Depending on your wireless provider, your phone or the one you are giving may be pre-programmed to dial 9-1-1 by pressing only one button!

Can you see the danger? Can we count on your help?

The men and women of the Los Angeles Fire Department ask you to help us decrease unintentional 9-1-1 calls by turning OFF the emergency 9-1-1 autodial feature and locking the keypad of wireless telephones when not in use. If you fail to do so, you or a loved one could easily bump the keypad and place an accidental call to 9-1-1.

Aren't all phones equal?

Unlike your wired phone at home or work, most wireless phones currently do not provide the caller's location and phone number to 9-1-1 operators. Emergency operators have to determine the location and nature of the call by speaking with the caller. If there is no one speaking on the phone, such as when an unintentional call is made, the dispatcher has to take extra time to listen and determine if it is a legitimate emergency. That creates a burden for emergency service dispatchers and can making real emergency callers wait for their urgent calls to be answered. If you do accidently dial 9-1-1, please stay on the line and inform the Dispatcher that you made a mistake. This will prevent them from going through the actions described above.

You can help us keep the 9-1-1 phone lines open for real emergencies. Read your owner's manual or contact your wireless provider to find out how to:

- Turn OFF the emergency 9-1-1 autodial feature.
- Lock your keypad when you are not using the phone.

If your wireless phone does not have a keypad lock feature, it's important to be aware at all times of how your phone is carried, whether on your belt, in a purse, briefcase or bag. Activating a keypad lock is usually quite easy. Check your manual or your providers website for more information.

What about an EMERGENCY you say?

You should be able to easily dial the three digit 9-1-1 emergency number when necessary. By locking your keypad when not in use, you can extend battery life and prevent unintentional local and long-distance calls.

In the event of an emergency, please remember that wireless 9-1-1 calls do not currently provide emergency personnel with your name, phone number or location. If you must call 9-1-1 for a situation that endangers human life or property and demands immediate attention:

- Take a brief moment to become aware of your *exact* location (ideally a street address and nearest cross-street if available) and then dial 9-1-1. LISTEN to the Dispatcher... their full-time job is to be helpful to people like you.

- Try your best to remain calm and answer each question clearly and accurately. The 9-1-1 Dispatcher will ask you for your exact location, your wireless phone number including area code, and may even ask your name. The 9-1-1 Dispatcher will type this information so that it can be relayed to responding Police Officers, Firefighters and Paramedics. The more calm you remain, the quicker help can be on the way!

After determining the exact location of the emergency and your wireless phone number, the Dispatcher may ask you a brief series of questions. Most questions will require a simple "yes", "no" or "I don't know". We do urge you to LISTEN to the 9-1-1 Dispatcher, and follow their instructions while help is on the way. Remain on the phone until the Dispatcher tells you it is OK to finish the call, and stay off the phone until help arrives. The Dispatcher or emergency responders may need to call you for directions or additional information. If help is no longer needed, be certain to call back to 9-1-1 and cancel the emergency response.

Here are some additional tips to ensure your safety and the safety of others when you get behind the wheel:

- Always Buckle Up
- Keep your hands on the wheel and your eyes on the road
- Don't let a phone call distract you from driving safely.

Carefully consider whether you should use your wireless phone while driving. Factors to consider include:

- Driving Skill and Experience
- Familiarity with the Vehicle
- Traffic and Weather conditions

Consider your alternatives to making or receiving a call while on the road:

- Allow voice mail to handle your calls and return them at your convenience
- Pull off the roadway if safe and legal to do so
- Ask a passenger to make or take the call.

If you do use your wireless phone while driving, use good judgment:

- Tell the caller that you are driving and may have to suspend the conversation
- Position your phone within easy reach
- Use a hands-free device
- Use memory dial and automatic redial features
- Memorize your keypad
- Dial numbers while you are not moving
- Do not engage in stressful or emotional conversations while driving
- Never take notes or look up numbers while driving
- Do not use data functions such as text messaging or web browsing while driving

We remind you to respect all applicable laws concerning the use of wireless phones. Some States, Provinces or Municipalities may not allow the use of earbuds or headsets and some may require hands-free use.

Oh, one last favor please! We kindly ask that you NOT call 9-1-1 in an attempt to test your new telephone. Our Dispatchers will be busy Christmas morn, and encourage you to instead call a loved one to share the great news about your new and exciting holiday gift.

Happy Holidays!

I was wondering if any agencies in Arizona broadcast any alerts as to Santa's location? I know that L.A and Orange County Sheriff's, and Orange County Fire in SoCal do.

http://www.freqofnature.com/sounds/santa-alert.wav (2001)

3911. So Cal Police Call Frequency Book for Sale

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2002-12-25 10:17:52 UTC
From: Rich Sauer
Topic: 3911 Message: 3911

The Southern California Monitoring Association (SCMA) is offering Gene Hughes' Southern California Detail Edition Police Call Book for sale on our web site at a discounted price. This is the 40th Edition and, sadly, the last as Gene has decided to discontinue the book.

Suggested retail is $12.99. If you order from the SCMA web site using PayPal, you pay only $10.95 plus $1.50 shipping and handling - $12.45 total for each book.

For 40 years Gene Hughes' frequency guide has been "The Bible" for scanner listeners in Southern California. This edition is sure to become a collector's item and the SCMA has a limited number available.

Please Note: This is NOT the Police Call Frequency Guide sold nationwide at Radio Shack stores. The 9 volume state-specific regional Police Call books contain a CD-ROM and retails for $19.99. We are NOT selling the regional volumes. The 2003 Southern California Detail Edition Police Call has a blue cover this year and DOES NOT come with the CD-ROM!

To order, go to the SCMA Web Page at http://www.socalscanner.com and scroll down to "Southern California Police Call" in the Featured News Stories section. Clicking on the link will take you to the order form.

Thank you. Happy Holidays and Happy Scanning!

Maricopa County SO put out an ATL, special attention districts 1 and 4, for an elderly male with white hair, beard, and glasses, wearing a red outfit and driving a sleigh powered by eight reindeer. Subject was reported to have been moving very fast and making frequent stops. Units were advised to use caution in approaching the subject, as he was known to be armed with a tazer and flashblang grenades.

Heh. Did the ATL go out over the analog 8336 or any other analog
talkgroup, or was it strictly on the digital Eastside talkgroup? Just
curious.

John.

Subject: US Scan. PHILLY RADIO SYSTEM

How can the Average Joe tell? Those who listen to police radio calls
probably noticed the difference in voice quality.
However, that difference will be short-lived.
The new voice quality is digital. This means that currently the city
is cross- patching the transmissions from the new system to the old system.
Once they "cut the patch," to use a techno-phrase, your scanner will transmit
nothing but buzzing. Do not fret, however, since Uniden Electronics is scheduled to
release a scanner that is capable of deciphering the new system. More about that
later.

John,

Not sure what agencies IF any bradcast anything about Santa, but if you were listening to AirEvac at all xmas eve, they were doing it. They kept telling their helos to watch out for santa, they thought he "was" in the area.

I believe that Tempe PD dispatch is the base that is running the
27/28/29 requests, and making the calls to the other departments for
transport, for the East Valley DUI Task Force. I haven't listened the
past 2 weekends, however. That's what I heard the first weekend I
heard them on 460.375.

I don't know what kind of combined effort the West Valley agencies
are making, if any, or what channel(s) they may be using. Anyone?

John H. Guetherman
Peoria, AZ.

3919. RE: [ArizonaScanner] DUI Task Force

From: Michael Todd
Topic: 3917 Message: 3919

I was out tonight with 7 David 14 for the task force.
Tempe has set up a patch from their talkgroup H to the UHF interagency frequency.

The DPS guys I spoke with had opted out of using that channel and were working on Metro East despite the fact that task force was mostly in the central area tonight.

I did not see Tempe's radio trailer at the command post tonight.

Mike

3925. RE: [ArizonaScanner] DUI Task Force

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2002-12-30 14:21:33 UTC
From: Lindsey, Mike
Topic: 3917 Message: 3925

We found that we did not need to be at the site of the task force to set up the patch and have it work for them. We have remote capabilities to bring the patch up and take it down with out ever going into where the trailer is parked. Lets us get some sleep!

I was out tonight with 7 David 14 for the task force.
Tempe has set up a patch from their talkgroup H to the UHF interagency frequency.

The DPS guys I spoke with had opted out of using that channel and were working on Metro East despite the fact that task force was mostly in the central area tonight.

I did not see Tempe's radio trailer at the command post tonight.

Mike

3926. RE: [ArizonaScanner] Re: Radio-syncracies

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2002-12-30 16:00:52 UTC
From: Dan Danz
Topic: 2428 Message: 3926

Geez, I hope you DID save this stuff, Harry ...

It should be required reading for every new dispatcher.

Let me contribute a few annoying radio procedures that I've observed, and if anybody hears me doing anything like it, please bring it to my attention.

Dispatcher: L229, were you clearing radio? (Meaning: did you call?)

Dispatcher: ...The complaintant stated ... (I guess the thought is: a complainant makes a complaint and so should be called a complaintant).

Unit: .... {some traffic}
Dispatcher: 10-4, {gives time}
Unit: 10-4
{Drives me up the wall when I hear it; I'm not sure why I find it SO annoying.}

Dispatchers who broadcast stolen vehicles and other attempt to locate calls and insist on giving the 20-digit case number, the officer's name and serial number, and the most annoying phrase "All information by and for the authority of" the originating police agency.

L. W. "Dan" Danz
Radio Dispatcher/9-1-1 Operator

Maricopa County Sheriff's Office <http://www.mcso.org/> (MCSO)
Phoenix AZ USA <mailto:L_Danz@...>
L_Danz@...
*Opinions expressed are my own.
I do not speak for MCSO or any of the staff of MCSO.

While we are on the subject of Radio-syncracies, can anyone explain to me why the word "Check" is used as an acknowledgement of transmissions in many fire departments?

Thanks,
Frank

You just be from Tucson ....
I have no idea why they use the word "check"
Then again I have no idea why they do half the things they do down
there.

I've always been curious to know that myself, but to date have found no
one able to inform me!

Let me know if you find out!

Mike

You could pick up the phone, 24/7, and simply ask them! If the
dispatcher knows I'm sure they will tell you and if they don't they will
ask their supervisor who may say "I don't know" :-(Worth a quick
phone call.

PS don't use 911 for your question!

Great idea, however it doesn't work ... I did one better and asked them once while on a tour of the Tucson Comm Center. The answer I got back was "What do other departments say? ... That□s just what our book says to say".

I'm sure there is a reason out there somewhere... I just have not been able to find it!

Heh. My post was actually *supposed* to go straight to Harry, not get posted to the group. (Not sure he's still here.) I guess I goofed. I'll retry directly to him. Anyways...

There's a thread of posts along these lines that start at 2419 and end at 2455. (Not continuous.) If anyone wants to go back through the archives and read them.

Any other observations of annoying/funny/strange things heard on the radio from anyone?

John

The answer I once got years back was that it dates to the days of using actual time-cards for unit history (before computers). A unit would have a long card that could hold about 5 calls worth of times on it. For each call, you had "dispatched", "enroute", "onscene", "in service" and so on. Next to each of those entries, you put a "check" when they occurred and / or wrote or stamped the time. So when the unit said they were "in service", you said "check engine 5" literally as you "checked engine 5's in service box". If you wanted to know what a unit was doing, you pulled out their card and looked where your last check mark was. I saw those cards. Rural/Metro was still using them well into the late 80's, maybe even early 90's, when they were in the old comm center that was behind the bays at NWFD Sta32. Once they built the new facility at Grant and 15th they were all wazzled and dazzled with something called a com-pu-ter. They left the "cards" at station 32 but brought the "checks" down to Grant. :)

Other agencies say it too, I know.

Date: 2002-12-31 16:00:29 UTC
From: Frank Faris
Topic: 2428 Message: 3934

I had assumed the use of "Check" to acknowledge a transmission was unique to Tucson. I had never heard that term used anywhere else in the country until this past week when I was visiting in Columbus, MS. "Check" was used by some of the units and some of the units used the appropriate 10 code.

The card system that Dan described was obviously used in many departments

The local PD units use 10-3 for affirmative. Rarely does one hear 10-4.

Even though I grew up in the south, I have not lived in the area for 40 years and I find the accents and colloquial phases heard on the radio to be interesting.

3935. Updated Phoenix 800 MHz timeline

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2002-12-31 21:30:20 UTC
From: Dan Rollman
Topic: 2428 Message: 3935

The latest issue of Phoenix Fireworks (a PFD newsletter) has another updated timeline for switchovers to the 800 MHz system currently being installed.

The timeline has the system being operational Sept. '03
Police and Municipal services transition over between 9/2003 - 10/2004
Fire transitions over 8/2005

So, Phoenix PD stuff could be on it within 9 months, but FD won't be switching over for nearly three years.

When I started dispatching at the Oakland (CA) PD in 1961, the acknowledgement was "CHECK". And perhaps for the same reason on the manual system.
Even a CHECK-O slipped in once in a while...

That being the case, perhaps now the comm shop will spend some time (and money) upgrading the VHF receiver voting system and console Channel 1 select system...OR,
Why doesn't every console's channel 1 come out on North Mountain????
Happy New Year.

Sadly, PFD has Ch1 voters adjusted for their use, rather than scanner listeners. :)
As I understand it, Alarms are voted to the nearest transmitter to the dispatch location, resulting in units to be dispatched receiving the best signal.

If every dispatch came off North Mountain, a lot (more) people would die in Sun Lakes and the apparatus would be in disrepair from never leaving the bay! :)

Replies to units often go off the voter site of the unit heard, allowing clearer communication with the intended recipient.
